# FRIDAY-SATURDAY AUGUST 14-15, 2015 DAY/NIGHT OPERATIONAL PERIODS 0800-0800

# ICS Form 202 INCIDENT OBJECTIVES

1. INCIDENT NAME Route Complex 2. **DATE** 8/13/15

3. TIME 2100

4. OPERATIONAL PERIOD (DATE/TIME)

8/14-15/15 0800-0800

5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES)

# **Management Objectives**

### Firefighter Safety:

 Use the risk analysis process to manage risk and maintain safety of firefighters. Weigh firefighter exposure with the probability of success when implementing suppression actions.

# Provide for the safety of the public through a risk assessment process and implementation of actions such as:

- Protect homes, valuable structures and infrastructure from damage or loss.
- Evacuation of Hyampom and surrounding areas where a threat of the fire to their well-being exists.
- Road and area closures.
- Smoke issues Consider setting up air quality monitors in the town of Hyampom to monitor smoke impacts

## Pilot Ridge / South Fork Mountain Archaeological Resources:

- Minimize impacts to cultural resources.
- Assign Line Qualified Archaeologists to Divisions where dozers are working/planned.

# South Fork Trinity River:

• This is 1 of only 2 rivers with a Spring Run of the listed anadromous species Chinook and is the largest undamned river in the area. Minimize impacts to water quality to the best extent possible.

### **Public Information:**

• Provide timely, accurate and appropriate information to the public, partners, cooperators and internal organization. Mitigations and intent will be clear and communicated to the affected public and cooperators and assisting agencies.

Minimize the spread of invasive weeds such as spotted knapweed, diffuse knapweed, and yellow starthistle. Knapweed occurrences are not yet widespread on Six Rivers and the South Fork/Pilot Creek (east) is one of the very few areas with occurrences. Occurrence of these within the fire perimeter:

- 2N17 spotted knapweed (CEMA4), thousands of plants, extends down road.
- 2N18 diffuse knapweed (CEDI), yellow starthistle (CESO3), spotted knapweed (Route 1); various occurrences.

Per Invasive Plant Best Management Practices, when possible:

- · Equipment cleaning before coming onto the fire.
- Avoid use of 2N17 and 2N18.
- If avoidance is not an option and equipment is slated to work elsewhere in the area, see Forest staff about equipment cleaning.

Conduct firing operations to minimize high severity fire and the unwanted effects to vegetation and soil.

# **Control Objectives**

For Chance and Johnson Keep Fire:

- East of the Mad River to Board Camp Mountain to Cow Creek
- North of the Mad River and Sulphur Glade Ridge
- West of the South Fork of the Trinity River
- South of Grouse Creek

# For Buck Keep Fire:

- · East of Swayback Ridge
- North of Shanty Creek
- · South and West of the Van Dusen River

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 11	TYPE OF FIRE: Wildland Fire
FIRE NAME: Route Complex	OPERATIONAL PERIOD: Day/Night
DATE / TIME ISSUED: Aug 13, 2015 2000	DATE: Aug 14,2015 Friday
UNIT: Six Rivers NF / Mad River	SIGNED:

# **INPUTS**

## **WEATHER SUMMARY:**

<u>Daytime:</u> Sunny with hazy conditions. .\*\*Night time See Spot forecast\*\*

Temps: around 77°

RH: = around 35%.. Eye level Wind = Northwest 4-6 mph....Ridgeline winds from up to 11 mph in the afternoon.

**ERC = 50** ...LAL 1 ..CWR..Zero

### GENERAL:

The fire is burning timber Fuels with some brush and grass intermix. Manzanita, Mixed Pine, Cedar and Douglas Fir are throughout. Live Fuel Moisture = Timber 150% ...... Shrubs 80%. There is mortality in the aerial fuels that will contribute to torching. Rollout has been a significant factor in fire progression.

The fire to date has been primarily topography driven. The predominant factor of fire spread has been consistently surface fire spread backing, flanking transitioning to head fire alignment. Torching and short duration crown fire runs may develop with slope and wind alignment. Low dead fuel moisture contents are the driver behind continuous fuel consumption. Past significant runs were with slope and wind alignment .Sustained crown fire runs were dependent upon the surface fire and slope alignment. Recent fire activity has increased 1100 hrs – 1800 hrs.

Rates of spread: head fire = 3-8ch/hr with backing 1-3 ch/hr.

With strong winds ROS of 25-40 ch/hr with head fire with crown involvement.

Spotting  $\frac{1}{2}$  - mile...PIG = 70% day.....10%...Night

DFM =  $10 \text{ hr} = 5\% \dots 100 \text{hr} 7\%$  and 1000 hr = 10%

# **SPECIFIC:** All Divisions:

# Day:

- Increased surface temperature of fuels will allow the fire to be more aggressive today...
- Understory surface fire spread with backing and flanking fire is within the threshold of control to go direct.
- Tree torching will occur today, heads up with wind and sun exposed in the crown.
- Slope reversal look for the fire to transition to headfire alignment .Headfire runs will develop today .....
- Spotting may develop from wind and plume up to ½- mile... also from and tree's falling over the line.
- Favorable conditions for firing operations backing into the wind

# Night

- Rollout can re align this fire to move rapidly with slope.. WX.. Temp..50...RH50%...Wind 4-8 w/G15 NNE
- Winds will create embers from stove piped trees
- Watch identify your fire getting aggressive with increased winds..

# AIR OPERATIONS

May be limited due to wind smoke and haze.

Sunrise= 0620 Hrs and Sunset 2018 Hrs.

## **SAFETY**

Validate your time to safety zones.... so know what you fire is doing at all times....

Identify when your fire has the ability re-position itself to run upslope with headfire.

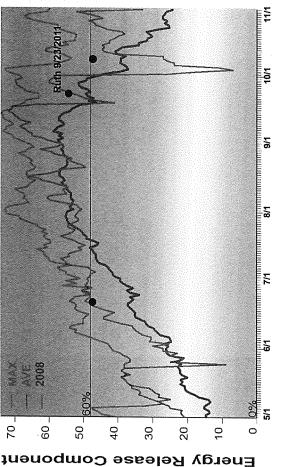

Monitor fire activity tree torching and ember cast can be more prevalent today

STOP.....Stop Think Observe and Predict...

Keep P.A.C.E in you engagement tool kit.. **P**rimary Plan, **A**lternative Plan, **C**ontingency Plan, **E**mergency Plan. *Time your escape routes...validate as the fire moves.*

# **Local Thresholds - WATCHOUT:**

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 6 mph; RH less than 19%; Temperature over 90; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 46 and when ERC exceeds 48.

Graph Interpretation, Energy Release Component: Maximum = Highest ERC by day for 2003-2014
Average = Shows Peak Fire Season
60% = 60th Percentile means 40% of days studied had an ERC above 48.

# PAST EXPERIENCE I LOCAL KNOWLEDGE:

Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires'= 50 acres). Large fires become more frequent when 1000 hour fuel moistures drop below 14, when BI exceeds 46, and when ERC exceeds 48 (large fires can and do occur at lower indices)

Afternoon winds W/NW along Ruth Lake Corridor greatly influence direction of fire spread in the area.

South Fork Mountain affects weather in the area: Funnels the wind and influences thunderstorm development and movement.

Other Watchouts not related to weather and indices; dangers associated

with marijuana gardens and arson fires.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 2003-2014

Average = Shows Peak Fire Season
60% = 60th Percentile means 40% of all days studied had a
BI above 46

#### HEALTH AND SAFETY MESSAGE

#### SAFETY starts with YOU

We are ALL accountable for SAFE behaviors

**INCIDENT:** Route Complex

DATE: August 14/15 2015 TIME: Day/Night 0800/0800

#### **Major Hazards and Risks:**

Fire Behavior- Disengage early; know your escape routes and safety zones.

Dehydration- Continue to drink the fluids, 1 quart per hour minimum. Supplement with Gatorade.

Air Operations- Visibility, multiple aircraft, retardant drops, and communications.

Hazard Trees- Snags as well as Green trees in a burned area can be suspect, check roots and for signs of rot.

Spike Tactics-Keep your spike camp area clean of food. Do not leave food or trash on the fireline. Pack in Pack out.

Transportation-Watch your footing on steep slopes and rough ground. Drive defensively with lights on.

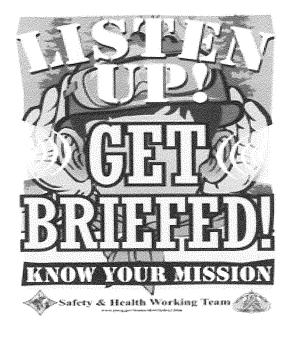

Environmental- Snakes, Bears, Mountain Lion, Bees Steer clear of all of them.

Marijuana Cultivation- When you see it reveres direction and avoid area. Notify DIVS and others working in the area.

Fire Order of the Day – Fight fire Safely and aggressively

<u>Narrative</u>: Because of these changes and many people working in unfamiliar divisions it is a good time to get acquainted with leadership, the hazards, and terrain in your divisions. Work cautiously and identify all hazards before deploying crews.

Keep up the good work and continue with the excellent safety record,

# Mitigate or Change Tactics When Faced With

- ⇒ Indirect Fireline
- ⇒ Lack of Anchor Points
- ⇒ Frontal Assault
- ⇒ Extreme changes in weather & Wind Conditions
- ⇒ Reburn Potential
- ⇒ Presence of Hazardous Materials
- ⇒ Lack of Communications With All Forces
- ⇒ Structural Protection
- ⇒ Spotting Becomes Common
- ⇒ Downhill Line Construction
- ⇒ Underslung Line
- ⇒ Fatigued Crews
- ⇒ Firing Operations

## Today's discussion is from the Fireline Safety Category.

#### **BACKFIRING OR BURNOUT OPERATIONS**

Backfiring or burnout operations are often critical operations in the fire management job. If planned and executed correctly, they can speed control of a fire and greatly reduce suppression costs. Conversely, if done incorrectly, they can endanger personnel, extend control time and increase cost. Safety considerations must always be given first priority. No backfiring or burnout action, regardless of strategic importance or other critical factors, is worth risking one human life!

- Backfiring or burnout operations must not jeopardize the safety of personnel or equipment or compromise suppression actions on adjacent portions of the fireline.
- One qualified individual must be responsible for controlling and directing the firing operation.
- Before beginning backfiring or burnout operations, assure that:
  - · Lookouts are posted.
  - Communications are established with both fireing and holding teams.
  - Escape routes and safety zones are established, known to all resources, and will not be compromised by the firing operations.
- If it is necessary, and time allows, concentrations of fuel adjacent to and inside the control line should be removed.
- Fuel outside the control line may be removed; concentrations of fuel may be scattered, covered with foam or wet down, or treated by ground or aerial retardant applications.
- Critical points such as hooks in the fireline, saddles or canyon may require extra holding forces.

5. INCIDENT MEDICAL AID STATIONS

#### LINE MEDICAL EMERGENCY:

Crew Supervisor to contact Division Supervisor/Operations with patient complaint, condition, and location.

Division Supervisor/Operations contacts Route Communications on Command Channel:

- Division Supervisor or \*POC to use "SoCal Team 1 Medical Radio Report" on next page
- Division Supervisor or \*POC will run medical emergency on Command Channel
- Route Communications contacts Medical Unit Leader on Command Channel or (951) 235-1573 & (760) 473-7378
- Medical Unit Leader will:
  - Ensure Route Communications dispatches appropriate ground/air transport resources
  - Notify receiving hospital of injury status
  - Develop primary and contingency transport plan
  - Notify Safety, Logistics, and Operations
  - Contact Route Communications for notification of emergency (if not already contacted)

#### **CAMP MEDICAL EMERGENCY:**

Contact Medical Unit with patient complaint/condition and location, via Command Channel.

- Medical Unit contacts:
  - Safety
  - Logistics
  - Operations
- Medical Unit Leader will:
  - Contact Route Communications to dispatch ground/air transport resources
  - 2. Notify receiving hospital of injury status
  - 3. Develop primary and contingency transport plan

\*POC (Point of Contact)

#### If air or ground ambulance is DELAYED:

Transport patient to rendezvous with Ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

#### If Declaring an "Incident within the Incident"

The closest DIVS or designee respond to manage the incident and will be the POC. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response. The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.

## Route Complex August 13, 2015 Human Resource Message

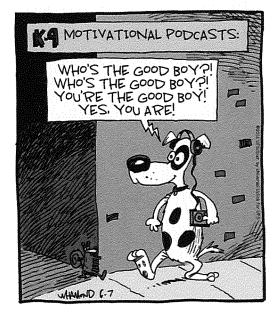

#### **Motivation**

What is motivation? Motivation is a powerful force. It:

- is the drive that encourages action or feeling.
- can encourage and inspire.
- -can persuade, convince and propel you into action.
- -is a driving force in our lives
- -comes from the desire to succeed.

Now is the time to keep your eyes wide open for symptoms of complacency. As the fire continues, stay motivated. Complacency leads to lack of effort. Take the time to recognize the success that has been achieved and strive for more.
