ROUTE COMPLEX CA-SRF-1476 IAP

Sunday/Monday August 16 - 17, 2015 0700-1900 PDT

Today's discussion is from the LCES (Lookouts, Communication, Escape Routes, Safety Zones) Category.

DRIVING SAFETY

Driving is one of the most hazardous tasks that we perform when assigned to fires . Based on recent accident trends, vehicle accidents are the source of more deaths and serious injuries to wildland firefighters than any other single cause. Vehicle operators need to recognize their own poor driving habits and strive to develop proper defensive driving techniques.

A good starting point is attitude. A positive attitude towards improving your defensive driving skills will help you achieve the necessary changes in your driving habits.

Inattentiveness is a major contributing factor in motor vehicle accidents within the wildland firefighting community. Here are some techniques for maintaining your attention while driving.

- Drive only when you are well rested and alert.
- Practice situational awareness when driving; be aware of what is happening in front, behind, and on both sides of your vehicle.
- Avoid using cell phones, radios, GPS units, CD players or computers while driving.
- By constantly moving your vision, checking mirrors and distant road conditions, you can avoid highway hypnosis and daydreaming.
- Avoid eating or drinking while driving.
- Do not attempt to read maps or write directions while driving.
- When talking with passengers, keep your eyes on the road and both hands on the steering wheel. Do not engage in confrontational or argumentative conversations.
- · Do not be in a hurry, be patient.

Safe driving starts with a safe vehicle. Before operating any vehicle, you must be sure the vehicle is in safe operating condition. Not only should you perform a pre-operation inspection, some vehicle defects can only be detected while the vehicle is operating. The vehicle operator is also responsible pre-operation, during operation, and post-operation inspections.

ICS Form 202 INCIDENT OBJECTIVES

1. INCIDENT NAME Route Complex 2. DATE 8/15/15 3. TIME 2100

4. OPERATIONAL PERIOD (DATE/TIME)

8/16-17/15 0700-0700

5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES)

Management Objectives

Firefighter Safety:

 Use the risk analysis process to manage risk and maintain safety of firefighters. Weigh firefighter exposure with the probability of success when implementing suppression actions.

Provide for the safety of the public through a risk assessment process and implementation of actions such as:

- · Protect homes, valuable structures and infrastructure from damage or loss.
- Evacuation of Hyampom and surrounding areas where a threat of the fire to their well-being exists.
- Road and area closures.
- · Smoke issues Consider setting up air quality monitors in the town of Hyampom to monitor smoke impacts

Pilot Ridge / South Fork Mountain Archaeological Resources:

- · Minimize impacts to cultural resources.
- Assign Line Qualified Archaeologists to Divisions where dozers are working/planned.

South Fork Trinity River:

This is 1 of only 2 rivers with a Spring Run of the listed anadromous species Chinook and is the largest undamned river in the area.
 Minimize impacts to water quality to the best extent possible.

Public Information:

Provide timely, accurate and appropriate information to the public, partners, cooperators and internal organization. Mitigations and intent
will be clear and communicated to the affected public and cooperators and assisting agencies.

Minimize the spread of invasive weeds such as spotted knapweed, diffuse knapweed, and yellow starthistle. Knapweed occurrences are not yet widespread on Six Rivers and the South Fork/Pilot Creek (east) is one of the very few areas with occurrences. Occurrence of these within the fire perimeter:

- 2N17 spotted knapweed (CEMA4), thousands of plants, extends down road.
- 2N18 diffuse knapweed (CEDI), yellow starthistle (CESO3), spotted knapweed (Route 1); various occurrences.

Per Invasive Plant Best Management Practices, when possible:

- · Equipment cleaning before coming onto the fire.
- Avoid use of 2N17 and 2N18.
- If avoidance is not an option and equipment is slated to work elsewhere in the area, see Forest staff about equipment cleaning.

Conduct firing operations to minimize high severity fire and the unwanted effects to vegetation and soil.

Control Objectives

For Chance and Johnson Keep Fire:

- · East of the Mad River to Board Camp Mountain to Cow Creek
- · North of the Mad River and Sulphur Glade Ridge
- West of the South Fork of the Trinity River
- South of Grouse Creek

For Buck Keep Fire:

- · East of Swayback Ridge
- North of Shanty Creek
- · South and West of the Van Dusen River

6. WEATHER FORECAST FOR OPERATIONAL PERIOD - See Attached.

GENERAL SAFETY MESSAGE - See Attached.

FIRE BEHAVIOR FORECAST									
FORECAST NUMBER: #2	TYPE OF FIRE: Wildland Fire								
FIRE NAME: Route Complex	OPERATIONAL PERIOD: Day 08/16/13								
DATE ISSUED: 08/15/2015	TIME ISSUED: 2100 hours								
UNIT: Six Rivers/Shasta-Trinity National Forest	SIGNED: Tim Metzger, FBAN								
	INPUTS								

WEATHER SUMMARY:

See Attached Fire Weather Forecast

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Today will see low humidity in the teens (14-18% valleys, ridges13-17%) with unstable conditions and a very weak overnight recovery. Temps will be even hotter than the previous day (valley bottom 90-95) (ridgetops 84-88) Monday will see a repeat of the same conditions with continuing hot temperatures and similar humidity. Winds generally light to moderate upslope upvalley 6-12, with gusts to 15 out of the NE. Surface fire and individual tree/group tree torching can be expected as the fire continues to back into the valley bottoms. Continued consumption of subsurface fuels on all divisions resulting in deep holes and possible ash pits. The fire is burning primarily in a fuel model 2, 8 and 10, and generally, there will be a high probability of spotting outside of control lines where slope and fuels align (upslope spread) or downwind of any significant column development. (spotting of .2 miles)

Energy Release Component (ERC) is 54 and slightly above average, 1000 hour (heavy) fuels are calculated at 8-10%. Live woody is 2/3 cured and is becoming available to burn. Fire will carry through deciduous species when supported by concentrations of ground fuels in exposed areas (except north aspects). **Probability of ignition will be near 88%**

Very dry unstable conditions with NE winds

Indicators for Increased Fire Activity

Relative Humidity <19%, Winds >6mph, Temperatures >90F, 1000 fuel moistures <14%,

FIRE BEHAVIOR

Division A, Expect an increase in backing fire spread and be on the look-out for slope reversal in the lower part of the drainage as fire will increase in activity than what has previously been occurring. Expect any upslope spread to aggressively seek ridgelines. Burn out operations should take advantage of downslope winds in the late afternoon evening hours as fuels are at the lowest moistures and humidity's are on the rise. Expect some short range spotting 0.1 miles

Division C,D: Expect continued backing fire into the Pilot Creek drainage. Post lookouts and pay attention as any fire established below the dozer line along the division will aggressively seek ridgelines and you can expect intense surface fire, individual group tree torching and short duration crown runs. Pay particular attention Happy Jack Springs, holm buttes, and Salt Ground areas as modeling indicates that these are the areas that have the highest potential to be impacted.

Division F,H: Expect continued backing fire across both divisions characterized surface fire behavior with intermittent single to group tree torching as the humidity continues to drop into the teens. Be on the lookout for rollout and slope reversal as fire will aggressively seek ridgelines if established below the main fire. Persistent burning in the heavies and deep duff will hamper mop-up operations. Continued burning of snags will present control problems if trees fall across the lines.

Division N,P: Smoldering and creeping in all areas across the divisions as the day progresses. Persistent burning due to the low fuel moistures and heavy fuels may present control problems. Pay attention to the small details of mop-up to not compromise structures.

Divisions W: Northeast and Northwest winds will increase the probability of spotting across the division. Fire will continue to back toward control lines and fire will increase in activity in the afternoon as lower humidity's than previously experienced will be present across the division today. Pay particular attention to unburned areas between the control lines and the fires edge.

Division Chance: Continued smoldering and creeping into the interior portions of the burn.

AIR OPERATIONS:

Moderate inversion will affect air operations, but should begin to dissipate around 1100. Smokey conditions will hamper air operations

SAFETY DO NOT GET COMPLACENT as the fire will experience warmer and drier un-stable conditions than the fire has previously experienced. Pay attention to the details.

INCIDENT Weather Forecast

FORECAST NO: 2

PREDICTION FOR: DAY SHIFT - NIGHT SHIFT

SHIFT DATE: Sunday, August 16 2015

NAME OF INCIDENT: Route Complex

UNIT: USFS Six Rivers NF

SIGNED:

Dan Borsum

FORECAST ISSUED: 2000 Saturday, August 15, 2015 Incident Meteorologist

WEATHER DISCUSSION: Humidity in the teens today!

Expect lower humidity today as a weaker recovery overnight will combine with even hotter temperatures. Winds will be slope and valley driven with the hotter temperatures allowing gusts in chimneys and saddles to reach 20 mph. Smoke is going to play a huge role in temperatures across the fire so Divisions F, H, N and P could see temperatures 10 degrees lower and humidity 10% higher. The airmass will be unstable and expect to see increased dust devil and fire whirl activity. Expect another poor recovery overnight and similar conditions on Monday.

FORECAST FOR TODAY: Sunny...smoky and hot

Temperature:

Valley Bottom

90-95

Ridgetop

84-88

Humidity:

Valley Bottom

14-18%

Ridgetop

13-17%

20 FT WINDS:

SLOPES/VALLEYS:

RIDGES:

Upslope/upvalley 6 to 12 mph. Gusts to 15 mph afternoon hours

Northeast 4 to 8 mph becoming light

TRANSPORT WIND:

INVERSION:

Northeast 5-10 mph becoming northwest by afternoon

Moderate inversion breaking around 1100 PDT

OUTLOOK FOR TONIGHT: Clear and smoky

Temperature:

Valley bottom

53-57F

Ridgetop

60-65

HUMIDITY:

Valley bottom

55-60%

Ridgetop

35-40%.

20-FOOT WIND:

SLOPE/VALLEY:

Downslope 3-5 mph

RIDGETOP:

Northeast winds 5 to 8 mph

TRANSPORT WIND:

Northeast 10 mph

OUTLOOK FOR MONDAY: Sunny...smoky and hot

Temperature:

Valley Bottom

90-95

Ridgetop

84-88

Humidity:

Valley Bottom

14-18%

Ridgetop

13-17%

20 FT WINDS:

SLOPES/VALLEYS:

5:

Upslope/upvalley 6 to 12 mph. Gusts to 15 mph afternoon hours

RIDGES:

Northeast 4 to 8 mph becoming light

TRANSPORT WIND:

Northeast 10 mph becoming northwest

SAFETY MESSAGE Route Complex

Sunday August 16, 2015

Major Hazards

- Continue Transitional Situational Awareness.
- Weather & Fire Behavior
- Continually Assess Reassess work location, escape routes
- Duration of event, continued burning subsurface weakening of roots systems and burnout of stumps.

Changed or Changing Conditions

- · Additional transition outlook, merging Route & Mad River incidents over days ahead.
- Review Fire Weather and Fire Behavior. Forecast calls for increasing temps, lower
 RH and fuel moistures. Check weather throughout your shift and monitor trends.
- · As you work through the day, your progress may render escape routes ineffective.
- Additional burn periods have hidden unseen consequences not readily visible to a
 casual observance.

Mitigations

- Change continues as incidents are merged. Anticipate, plan ahead. PL5 means resources are scarce - Contingency, what will you do if orders aren't filled?
- Monitor weather and fire behavior forecasts. Listen for updates and alerts during your shift. Monitor the sky and local conditions in your work area. Check with observers/lookouts, adjacent forces.
- Revise and identify escape routes. Communicate and make sure they are known to all.
- Additional burn periods may increase the possibility of snags & green trees being weakened by fire. Reassess as you re-enter your work area. What was safe yesterday may be a new hazard today. Think in multiple dimensions Left, Right, Up slope, Down slope and Vertical!

6. Control Operations/Work Assignments:

- · Continue prepping along Pilot Ridge Road.
- · Monitor fire edge along Pilot Creek for spots across creek.
- · Assess opportunities for direct line from Pilot Creek to C/D break.
- · Assess potential to tie in Pilot Ridge Road with contingency road system to the West.

7. Special Instructions:

- · Back haul trash.
- · Track all water use from water points. Provide daily weather observations.

E Control Operations/Mark Assignments						

6. Control Operations/Work Assignments:

- · Water Tender provide water to engines and any hose lays as needed.
- · Stage Dozer for use on any new hotspots as needed.
- . EMT's stage for Deployment to division H and P/N
- TFLD utilize engines for mop up out to P/W break and along Dozer lines above (west) Loop Road in Division N.
- Begin stockpiling hose and pumps and have South ground support and haul to South ICP.

7. Special Instructions:

- · Back haul trash.
- · Track all water use from water points.

Jpon occurrence of a "Major Medical" o	r accident involvin	ng significant injury on the fire	line, the closest DIV	S should res	spond directly to the	e scene t	o take c	ontrol of the	ne situation

and direct necessary actions. If the DIVS is unavailable, the nearest fire line supervisor or leader needs to take charge.

- 1. Route Communications will clear all radio traffic on the Incident Command Channel-use to coordinate response as needed. Do Not Use Names. Identify: 1) The on-scene Point Of Contact (i.e. TFLD Smith); 2) Describe the nature of the accident/illness.
- 2. Obtain and facilitate nearest Medical Care Provider to the scene. On Scene IC is in charge of the scene. Identify to Communications the name of the On Scene Point of Contact and Medical Care Provider on site.
- 3. Check nature of the problem, # of patients, status, vitals, mechanism of injury & location. (GPS if possible) Request additional resources if needed.
- 4. Report the Severity of the Injury/Illness: Red, Yellow, Green.
- 5. Coordinate and facilitate appropriate transportation for patient(s) according to severity. Medical Care Provider in charge of patient(s).
- 6. Request additional resources / equipment as needed.
- 7. Inform Communications of any changes ton scene for Point Of Contact / Medical Care Providers.
- 8. Identify the evacuation location.Remove all unnecessary personnel from the scene. Secure scene, identify witnesses for later investigation. Keep a log.

LIFE SAFETY IS THE NUMBER 1 PRIORITY ON THIS INCIDENT

The term "Medivac" is for Emergency Medical Evacuations Only

Rodney Schmidt 10. Reviewed by (Safety Officer) Dan LeCrone 916.591.9006

MEDICAL EMERGENCY COMMUNICATION PROCEDURE FOR THE INCIDENT WITHIN AN INCIDENT

MEDIVAC INFORMATION

Contact Communications on the Command Channel, Communications will contact Command & General Staff.
Declare the nature of the emergency: Traumatic Injury Medical Illness
Is the injury/illness:
URGENT-RED Life ThreateningPRIORITY-YELLOW SeriousROUTINE-GREEN Minor
If Life Threatening request that the designated frequency be cleared for emergency traffic. Communications will broadcast on Command Radio the channel is for Emergency Traffic Only;
Identify the on-scene Incident Name:
Identify the on-scene Incident Commander:
Identify the on-scene Care Provider:
Identify the number of injured/ill: Identify the nature of the injury/illness:
Is the patient conscious? Yes No
Is the patient experiencing any difficulty breathing? YesNo
What is the mechanism of injury/illness?
Specific location of the patient (nearest DP / Helispot):
Is a helicopter needed for evacuation? Yes No
Pick-up point, route for ground transportation:
Are additional EMTs needed? Yes No
Any additional equipment or resources that are needed?
The ntify any changes in the on-scene TC or medical personnel as they occur

identity any changes in the on-scene ic or medical personnel as they occur.

Contact Communications when the Emergency has ended and the radio channel can be cleared for normal traffic. Communications will broadcast on Command Radio channel resumption of normal radio traffic.

Human Resource Message

<u>Dealing With Change</u>

--"Life is 10% what happens to us and 90% how we react to it." - Dennis P. Kimbro

Change is constant and inevitable but you can deal with it by recognizing it is a process. It's not like turning a light switch off and on but more like a series of steps. Once you reframe the way you think about things, you can increase your sense of control when you know how to deal with change.

Some people thrive on change, some don't like it. Recognize everyone reacts to change differently.

Some tips to manage change:

- -Step back and see the big picture.
- -Don't take changes personally.
- -Communicate with those who can support you when you're feeling stressed.
- -Ask questions so you can minimize the unknown and be engaged in the process. Accept there may be some uncertainty.
- -Recognize what you can control and influence and just as importantly, recognize there may be things that you cannot influence.
- -Staying fit and healthy will maintain your energy to better cope with changes.
- -Keep a sense of humor.

Come see us any time you have questions, concerns, or just want to chat.

TRAINING SPECIALIST MESSAGE

A Training Specialist is now on the incident.

ALL ASSIGNED TRAINEES

working on position task books will need to register with the Incident Training Specialist in order to receive proper credit for your assignment.

The Training Specialist is available immediately following the morning Operations Briefing.

Location: North end of football field in last trailer box.

Rob Scott TNSP Debbie Walls (t)
