WEATHER DISCUSSION: ...Subsidence Inversions Impacting Ridges in the Morning...
Extremely dry air associated with subsidence inversions is expected to impact the higher ridges Tuesday morning. The dry air will gradually mix out during the day as onshore low-level flow becomes established. A weak frontal system moves over the area Tuesday night, resulting in improved ridge-top RH recovery. A stronger system is expected to move across Western Oregon late Wednesday night or Thursday morning. The tail end of this system will clip the area for a slim threat of precipitation.

TUESDAY: Mostly sunny. Becoming partly cloudy after 1400.

TEMPERATURE: Below 3500ft 77-82F 3500-4500ft 75-80F ABV 4500ft 70-75F

HUMIDITY: Below 4500ft 25-35% ABV 4500 ft 15-25% early morning rising to 25-35% by late morning

20 FT WINDS:

SLOPES/VALLEYS: Up-slope to 6 mph in the morning then Up-slope/Up-valley 5-10 mph with gusts to 18 mph.

RIDGES: Northeast 2-6 mph becoming West to Northwest 6-11 mph in the afternoon with gusts to 20 mph

INVERSION: Subsidence inversion mixing out by early afternoon.
TRANSPORT WIND: West to Northwest 5-10 mph

TUESDAY NIGHT: Partly cloudy.

TEMPERATURE: 47-54F

HUMIDITY: Below 4500ft Above 75% ABV 4500ft 60-70% but falling to 35-45% Overnight.

FIRE BEHAVIOR

GENERAL

Expect the fire behavior to be minimal during the day due to continued moderate fuel moistures resulting from the recent rain and good relative humidity recovery at night. Fire spread will be primarily upslope during the operational period. Backing fire and roll-out will also contribute to spread. Mad River ERC for August 31 was 52, predicted for September 1 is 53.

SPECIFIC FIRE BEHAVIOR

For timber fuels the potential worst-case surface fire spread will be 2-4 chains/hour with flame length to 2-4 feet. There is potential for single/group tree torching in thicker understory vegetation. Most fire will be creeping/smoldering/backing. Large burning materials such as logs may roll long distances on steeper slopes and cross containment lines. Spotting distance short range, less than 1/10 mile. Probability of ignition will be 50-60%.

Route Complex

The Buck Fire and the Johnson Fire are in patrol/mop-up status.

Mad River Complex

Pickett and Gobbler Fires remain in patrol status. The Lassic Fire still needs mop-up in Division B where roll-out is still a concern.

AIR OPERATIONS

There should be no negative impacts to air operations today.

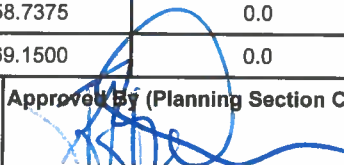

Sunrise: 06:40

Sunset: 19:46

SAFETY

- Fuels are slowly drying out after the recent rain with some areas outside the fire perimeter able to support fire. Keep an eye out for potential spots outside containment lines.
- Know what your fire is doing at all time: observe personally, use scouts, and post lookouts.

Appendix A

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart (feet)
1 - 5	200
6 - 20	125
21 - 40	60
41 - 60	40
>60	25

Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.
