INCIDENT Weather Forecast

FORECAST NO:

5

NAME OF FIRE: Gasquet Complex

PREDICTION FOR: Day Shift

SHIFT DATE: 8/16/2015

TIME AND DATE

FORECAST ISSUED: 1900 8/15/2015

SIGNED: Rachel Cobb

Rachel Cobb

Incident Meteorologist

WEATHER DISCUSSION: High pressure over California and the eastern Pacific on Sunday and Monday will cause a thermal trough to position itself over the area. This will bring hotter and drier conditions, and an offshore flow will keep skies clear. This will also lead to gusty northeast winds during the overnight hours and poor relative humidity recoveries in the mountains.

WEATHER FORECAST for Sunday:

WEATHER: Clear, but smoky.

MAXIMUM TEMPERATURES: 88 – 93 degrees valleys...81 – 87 degrees ridges.

MINIMUM HUMIDITY: 17 – 22 percent.

20 FT WINDS:

RIDGETOP – Northeast 4 to 11 mph.

SLOPE/VALLEY - Upslope/upvalley 3 to 8 mph.

HAINES INDEX: 5 (moderate).

STABILITY/INVERSION: Mixing height 8500 feet msl.

OUTLOOK for Sunday Night: Clear, but smoky. Low temperatures 60 - 65 degrees and maximum relative humidity 25 - 55%. Ridgetop winds northeast 10 to 18 mph with gusts to 25 mph. Haines Index: 5. Thermal belt 4000 - 5000 feet msl.

OUTLOOK for Monday: Clear, but smoky. Highs temperatures 80 - 91 degrees and minimum relative humidity 20 - 25%. Ridgetop winds northerly 4 to 8 mph. Mixing height: 9500 feet msl. Haines Index: 4.

EXTENDED FORECAST: Hot and dry conditions will persist through Thursday, but overnight relative humidity recoveries will start to show some improvement.

FIRE BEHAVIOR FORECAST

| ORECAST NUMBER: #13 | TYPE OF FIRE: Wildland Fire |
|--------------------------------------|-----------------------------------------|
| FIRE NAME: Gasquet Complex | OPERATIONAL PERIOD: August 16, 2015 |
| DATE ISSUED: August 15, 2015 | TIME ISSUED: 2000 |
| UNIT: Smith River NRA, Six Rivers NF | SIGNED: Bunk Binkel |
| | Typed/printed:/s/ Byron R. Kimball FBAN |

INPUTS

WEATHER SUMMARY: Clear skies. Warmer and drier, Haines Index of 5

MAX TEMPERATURE.....Valleys 88-93, Ridges 81-87.

MIN HUMIDITY......17 - 21%

EYE LEVEL WINDS.....Upslope/upvalley 3-8, Ridges NE 4 to 9,

For more specific information, please see the Incident Weather forecast

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Increased warming and drying bring excellent potential burning conditions. Stubborn inversion may delay the start to the burn period. Inversion may not lift till late afternoon. Expect low to moderate activity under the inversion. Beaware of indicators that the inversion is lifting, air becoming clear, fire activity increasing. Once the inversion lifts, conditions are present to allow for a significant increase in activity. Spotting becomes a concern as brush understory becomes involved.

With line construction in incomplete burns, be positive that you are exposing the black edge and getting all the hot ash and embers inside your line.

SPECIFIC:

Timber Understory: Fire behavior in the Understory models could begin early. Warmer and drier conditions will expand the burn window, once the inversion lifts. Expect more involvement of the understory brush and shrubs with increased intensity.

ROS: 5 to 10 ch/hr.

FL: 6 to 8 ft.

Timber Litter: Timber Litter fire behavior may be active early. Increased consumption of heavier fuels and understory may provide additional material for spots and roll out. Stay aware of rollout and upslope runs through incomplete burns.

ROS: 3 to 6 ch/hr.

FL: 2 to 3 ft.

Spotting becomes a concern with improved burn conditions. Know where your smoke is going and check for fallout.

AIR OPERATIONS:

Inversion will hold smoke in early. Air may improve in the afternoon as heating lifts the inversion.

SAFETY

Inversion breaks can lead to sudden increases in fire behavior. Pay attention to weather readings and other indicators that the inversion may be lifting or breaking.

Incident within an Incident Action Plan

When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the <u>initial</u> actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

Advise of the critical information needed:

- Accident scene safety assessment and advise incoming personnel
- · Number of injuries and their severity
- Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)
- · Assist the injured as necessary without endangering yourself or other personnel
- Do not move trauma victims unless their safety is in jeopardy
- Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures

Remain aware of surroundings and delegate personnel to monitor the main fire

The <u>Division Supervisor</u> will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

- 1. Delegate division oversight to another Division Supervisor or other qualified person.
- 2. Request a clear frequency from Comm and consider switching to designated Emergency Tactical (Incident Comm will notify the MEDL who will initiate the medical plan for injuries)
- 3. Order/delegate resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics, rescue equipment, patient transport needs, manpower)
- 4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
- 5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
- 6. Protect the scene for Investigators

Incident within an Incident Action Plan

Position Assignment Supportive Actions

Division Supervisor

- See items 1-6 on page one
- If unable to access accident/incident location, delegate command to a closer qualified resource

Medical Unit Leader

- Respond to Comm Unit as soon as possible
- Coordinate with Division Supervisor to ensure proper resources are rapidly ordered
- Assign a MEDL to the scene and other positions to support the response as needed
- Monitor condition updates of patient(s) and coordinate response with Operations

Communications Unit Leader

- Maintain clear radio traffic and monitor communications to support response
- Recommend appropriate security and investigative process
- Assess the need for critical Incident Stress Response

Safety Officer

- Provide for Safety personnel on scene as needed
- Recommend appropriate security and investigative process
- Assess the need for critical Incident Stress Response

Air Attack Supervisor

- · Obtain coordinates of the emergency location
- Coordinate air-medical response
- Assist and support the designated Point of Contact with communications and coordination of the emergency response as necessary

IC, Command & General Staff

- Manage the emergency and direct specific responsibilities to individual positions to provide an appropriate response
- Notify the host unit and host dispatch center of the size-up information
- Constantly monitor and assess the appropriate response and adapt direction as needed
- Submit all documentation pertaining to the emergency to the Plans Chief

SAFETY MESSAGE

"Adapt...Improvise...and Overcome"

Incident: Gasquet Complex

Date / Operational Period: 8/16-17/15

MAJOR HAZARDS AND RISKS

- Ongoing air operations. Refer to aviation blue pages in your IRPG for retardant and bucket drop safety tips.
- Increased fire behavior, maintain LCES
- Communications... conduct communications checks up and down your operational structure
- Dehydration—Drink lots of water
- Firefighter fatigue

- Rocky, rough terrain--falls/slips
- Snags!!! Rolling Rocks!!!
- Driving, backing and turning around on narrow, washboard mountain roads- watch for soft shoulders
- Fast moving traffic on HWY 199 take extra time to check for oncoming traffic prior to driving onto highway

FIRE FIGHTER FATIGUE

- Fatigue management goes beyond counting hours on timesheets, it is individualized and overt.
- Cumulative fatigue is dangerous. It prevents sound decision-making, confounds situational awareness, and dulls reaction times. It is as problematic in the office as it is on the fireline.
- Cumulative fatigue is manifest in the explanations used when folks are asked to take a break, or take a day off..."I don't have time." "There is too much going on." "As soon as things calm down a bit."
- Fire fighters MUST assure their situational awareness and that risks are assessed and mitigated before committing to an action.
- Our values are simple...firefighter and public safety are the number one concern to be addressed within the priorities of suppression. Please take the time to watch out for each other

Prepared By: Ired Hernandez. Safety Officer (t) Approved By: James Aragon, Safety Officer

INCIDENT SAFETY ANALYSIS 215a

Gasquet - Sunday, August 16, 2015

| 8. Location | 6. Control or Abatement Action (Engineering, Administrative, PPE, Avoidance, Education, etc) | |
|-------------|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| All | Hazard Trees | ~ Follow "Hazard Tree Safety" guidelines, IRPG pages 22 & 23 ~ Post lookouts, or use a spotter in mop-up areas with personnel ~ Don't park vehicles or take breaks in high concentrations of hazard trees ~ Establish trigger points for disengagement during high wind events |
| All | Air Operations | ~Follow " Aviation Watch-Out Situations" on page 44, IRPG ~Don't plan on air resources for medical transport or resupply. ~Refer to page 57, IRPG for directing bucket drops. ~Ensure positive communication with all air resources. |
| All | Chain Saw Operations | Follow "Hazard Tree Safety" guidelines, IRPG pages 22 & 23 Look up, down around for hazard tree indicators Only fell and buck trees within your expertise, and training Follow "Procedural Felling Operations" on page 79 in IRPG Do not fall trees during high wind events |
| All | Steep Terrain & Rolling Debris | Maintain 8'-10' spacing when working & walking Don't work above any personnel Evaluate necessity to send personnel in areas with limited access |
| All | Bees, Ticks | Be aware of crew members with sting allergies. Ensure crew members have medication pens if needed. Perform daily self inspection Use repellent as necessary |
| A,C,E,W,D,G | Heavy Equipment Operations | Ensure communications are established with operators Use hand signals if other communications are unavailable Maintain a 50'-100' exclusion area around equipment Use a spotter when backing |
| All | Driving & Traffic | ~ Practice "Defensive Driving" techniques traveling on all roads and city streets, mitigation strategy includes: ~ Use spotters when backing ~ Honk horn to alert personnel when backing ~ Always use headlights ~ Yield to pedestrians and bicycles ~ Observe posted speed limits ~ Follow 3 second rule of following distance when driving ~ Use chock blocks, turn wheels into hill |
| All | Firing Operations & Devices | Only personnel trained in the use of each device will be authorized to use firing equipment. Ensure all personnel are aware of firing operation that may affect them. Wear appropriate PPE. Ensure aerial/ground ignition plans have been adequately developed and personnel are briefed. |
| All | Injury & Medical Emergency | ~ Assist injured employee appropriate medical care ~ Use EMT's on Division for initial care ~ Follow medical protocol as outlined in ICS-206 |
| All | Fatigue & Overexertion | Drink 1 quart of water each hour during and after work Rotate crews out of smoky areas Set a reasonable work pace and allow adequate rest breaks while on the project Stagger work crews start time to limit fatigue Use buddy system to monitor personnel of heat related and fatigue issues Follow work / rest guidelines |
| All | Poisonous Plants | ∼ Identify and Avoid hazard areas ∼ Launder clothing ∼ Shower frequently |

Human Resource Message

FATIGUE

Fatigue affects your physical and emotional state! It can have a negative impact on your concentration, your conduct, and speech. This can have all sorts of consequences so please make an effort to rest up and get back to your normal productive self!

"In matters of style, swim with the current; in matters of principle, stand like a rock." - Thomas Jefferson

- HRSP-Kathy and HRSP(t) Andrea

Training Message

THANKS TO ALL TRAINER/EVALUATORS AND TRAINEES

Receiving quality training and documenting your training are very important. Everyone on the assignment depend on it.

If you are demobing on or before Monday, August 17

DON'T WAIT UNTIL THE LAST MINUTE

See the Training Specialist with:

- 1. Trainee Exit Interview Form: Filled out by the Trainee
- 2. Position Task Book: With Evaluator input done
- 3. ICS-225 Incident Personnel Performance Rating

Ann Hutchinson (Training Specialist)
