WEATHER DISCUSSION: North winds will continue behind yesterday's weak cold front. Skies will be clear today with warmer temperatures and lower humidity, but these values will still be greatly moderated from what was seen last week. Smoke will be slow to clear and may hang in the Siskiyou Fork drainage, but visibility will be better along the perimeter. Another low pressure is expected Friday that will pass by to the east with a slight chance of showers and thunderstorms. Temperatures will also be cool with high humidity. As the low pulls away a warming and drying trend will commence this weekend and continue into next week.

INPUTS

WEATHER SUMMARY:

See Weather Forecast for specific information and updates beyond 9/02/15

Sky: Mostly Sunny... Temps near 68°... RH around 32%...

Winds (20')... Valley/Slope: upslope/upcanyon 3-6 mph... Ridge: Afternoon NW 4-5 mph w/ gust up to 12 mph...

LAL 1... Haines 3... CWR 10%

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been topography dominated... driven by dead and down fuels. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Single/group tree torching has occurred. Short crown fire spread had occurred on the Coon/Bear fire with inversion lifting and a Haines of 5.

Live Fuel Moisture is estimated @ 90%. 100 hr fuels are @ 19 % and 1000 hr fuels are @ 12%.

ERC is predicted @ 40 today (up 8) and BI is predicted @ 46 (up 6)

Fuel Moisture levels, ERC's and PIG are for 9/02/15... expect values to change based upon weather conditions.

.....Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83°, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is around 10%.

Probability of Ignition (shaded) will be 30% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

With precipitation received the last couple of days, the Fires will display low/moderate surface fire intensity. The forecasted weather will tread towards a stable atmosphere over the next few days allowing fuels to retain moisture. Heavier fuels (100's/1000's) will need multiple days to bring ERC levels similar to last week (64 plus) which will increase fire behavior... torching, spotting and isolated runs. Cloud/Smoke cover will shade fuels and decrease solar radiation... shortening burn period. Large fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has contributed to the growth of the Fires. The Fires will have the ability to make uphill runs as fuels dry out and slope/winds become into alignment... caution on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. Spotting distances has been observed up to ¼ mile on the ridges.

Coon Fire: Good opportunity to hold and mop-up lines.

Bear Fire: will continue to back/flank north into the Siskiyou Fork, east towards Twin Peak/Doe Creek and south toward the South Fork Smith River... heads-up on head-fire runs on south facing slopes across the Siskiyou Fork towards Broken Rib Mountain. Good opportunity to hold and mop-up along control lines.

Peak Fire: will continue to back/flank with head-fire runs on slope reversal.

AIR OPERATIONS:

Air support will have early opportunity... depending upon smoke conditions.

SAFETY

- Consider the potential for re-burning of available fuels
- STOP... Stop Think Observe and Predict

Fire Danger Rating Area 110 Energy Release Component

Fire Danger Rating Area 110 Burning Index

- Fire Danger Area 110:
- * Smith River National Recreation Area
 - * Six Rivers National Forest
 - * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDRS)
- * 040102 Gasquet (NFDRS)
- * 040105 Ship Mountain (NFDRS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010

Average = Shows Peak Fire Season

62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.

- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires' = 50 acres).

- This area is ocean-influenced, expect abrupt changes in weather.

- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.

- Average slope is 65-70%, Fires are topography-driven.

- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009

Average = Shows Peak Fire Season

55% = 55th Percentile means 55% of all days observed had a BI below 41.

HEALTH AND SAFETY MESSAGE

SAFETY starts with ***YOU***

We are **ALL** accountable for **SAFE** behaviors

INCIDENT: Gasquet Complex

DATE: 09-03-2015

TIME: 0600

Major Hazards and Risks:

Safety Zones: IRPG Pg. 8. A safety zone is an area where firefighters can survive **WITHOUT** a fire shelter. Never plan to utilize a "deployment site". Take advantage of natural heat barriers and features. Please review the minimum specifications as listed in the IRPG and remember to account for numbers of firefighters and other items that will be in the SZ. Be sure the location is well communicated to all personnel and access routes (Escape Routes) marked as appropriate. Crown runs in the fuels we are working in could generate FH of over 200', which would require a SZ of over 46 acres.

Narrative:

Health and Sanitation: We are receiving reports that indicate a number of folks are discarding human waste in plastic water bottles and other containers in trash & recycle receptacles around camp. This presents a significant bio-hazard risk to folks that process recycling both here and downstream. CCC folks and others do not need to be exposed to the hazard. PLEASE refrain for using this method of discarding waste. If you feel current placement of porta-pots is inadequate, please coordinate with facilities to make your concerns known.
