PREDICTION FOR: Saturday
SHIFT DATE: 9/12-13/2015 0600-0600
TIME AND DATE
FORECAST ISSUED: 09/11/2015 2000

NAME OF FIRE: Gasquet Complex
SHIFT Day **UNIT:** CA-SRF
SIGNED: Eric Evenson
Incident Meteorologist

WEATHER DISCUSSION: Today we begin a slight downward trend in temperatures (1-2 degrees) and upward trend in afternoon relative humidities (1-2%) from yesterday. In addition, moderate humidity recoveries on the ridgetops are expected this morning. Other subtle changes today include a lower Haines Index as the atmosphere will not be quite as unstable and transport winds will be more from a westerly direction. Expect the morning inversion to trap smoke in the lower valleys through midday before lifting. This slight downward trend in temperatures and upward trend in humidities will continue into Sunday. A more noticeable change will come Monday as a cold front moves down from the northwest. Cooler temperatures, higher humidities, gusty ridgetop winds, and some light precipitation is expected with this front. The best chance for wetting rains will come in the Wednesday/Thursday time period.

WEATHER FORECAST (TODAY):

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire activity continues to be limited with good burning conditions. Green islands and areas of incomplete consumption provide areas of opportunity as heat builds up and ignites fuels previously dried. Single/group tree torching continues to occur.

Live Fuel Moisture is estimated @ 90%. 100 hr fuels are @ 7 % and 1000 hr fuels are @ 12%.

ERC is predicted @ 62 today (up 1) and BI is predicted @ 56 (up 1)

Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83°, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Probability of Ignition will be 75% into receptive fuels for the better part of the operational period.

SPECIFIC

Bear Fire:

Significant heat still remains in areas with unburned fuel. Bear Basin could still produce upslope runs if factors align. Reduced chance of spotting with winds from W-NW, but stay aware as fire reaches line. Increased smoke production has led to a return of Smoke inversions early in the day, lifting out by midafternoon. Activity under the inversion has started early in the shift so pay attention.

Fuel Type	Head ROS	Head Flame Length	Backing ROS	Backing Flame Length
Cover<50%	25-30 ch/hr	6-8 ft	1-2 ch/hr	1-2 ft
Cover>50%	10-15 ch/hr	7-9 ft	1 ch/hr	1-2 ft
Litter	6-10 ch/hr	3-4 ft	1 ch/hr	1 ft

Peak Fire:

Expect North side to continue to back into Eight Mile Creek. Buck Creek side will continue to back into Buck Creek. Slope and Wind alignment could push it to G-O Road if green fuel is present. Winds may help early. Expect activity level to be increased with good conditions.

AIR OPERATIONS:

Smoke inversions in Bear Butte Basin will limit visibility below approx. 5,000 ft. May improve in the afternoon.

SAFETY

- Weather factors have been important triggers on this incident. Pay attention to the Inversion lifting and Wind changing direction. These events can have a significant impact on your fire behavior.

Fire Danger Rating Area 110 Energy Release Component

- Fire Danger Area 110:
- * Smith River National Recreation Area
 - * Six Rivers National Forest
 - * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDRS)
- * 040102 Gasquet (NFDRS)
- * 040105 Ship Mountain (NFDRS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010
 Average = Shows Peak Fire Season
 62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

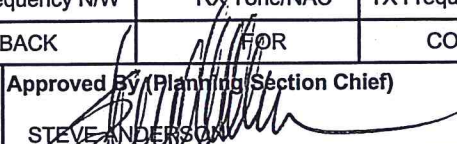

Fire Danger Rating Area 110 Burning Index

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.
 - Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires' = 50 acres).
 - This area is ocean-influenced, expect abrupt changes in weather.
 - Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
 - Average slope is 65-70%, Fires are topography-driven.
 - Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.
- Graph Interpretation, Burning Index:**
 Maximum = Highest BI by day for 1979-2009
 Average = Shows Peak Fire Season
 55% = 55th Percentile means 55% of all days observed had a BI below 41.

Accident / Incident Within the Incident Action Plan

When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the initial actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

Advise of the critical information needed:

- **Accident scene safety assessment and advise incoming personnel**
- **Number of injuries and their severity**
- **Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)**
- **Assist the injured as necessary without endangering yourself or other personnel**
- **Do not move trauma victims unless their safety is in jeopardy**
- **Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures**

Remain aware of surroundings and delegate personnel to monitor the main fire

The Division Supervisor will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Communications. Incident Comm will notify the MEDL who will initiate the medical plan for injuries.
3. Order resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators

Human Resource Message

Working Together

Civilization is the process in which one gradually increases the number of people included in the term 'we' or 'us' and at the same time decreases those labeled 'you' or 'them' until that category has no one left in it.

- Howard Winters

Take time to ask how someone else's shift went today.

Weed Wash: All vehicles must go through weed wash upon arrival at incident, before Demob and before traveling to the Bear Fire if they have been on the Peak, Feeder or Coon Fires. Weed wash is located at the fueling station

Fish Screens: Screens are required for water drafting, including portable pumps. Screens are available in supply.

Water Treatment: Treatment of water from all sources is required to prevent spread of Port Orford Cedar root rot.

- Treat water from all sources with 1 gallon bleach to 1,000 gallons water
- Do **NOT** treat water used with retardant

Dozer Use:

- All dozer lines and safety zones require archaeological clearance prior to construction.
- Dozer lines should use existing roads or skid trails where possible.

Please stay on roads or already disturbed sites

Do not drive in meadows

Limit snag falling, unless needed for safety or line protection.

Direct questions regarding Natural Resources through your Division Supervisor

Effective Water Bar Construction

When constructing waterbars, place them the right distance apart, at a diagonal to the fireline. They should divert, discharge and dissipate the energy of the flowing water. Be sure to make them deep enough to be durable and such that soil does not block the outlet.

Recommended Spacing for Fireline Waterbars	
Fireline Slope %	Maximum Distance (Feet)
1-5	200
6-20	125
21-40	60
41-60	40
> 60	25

Waterbars may be closer. When in doubt, put in more.

Waterbars should be at least 2 pulaski (4-6") widths wide and 12-24" high for handlines
