OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated...driven by dead and down fuels. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 1000 hr fuels are @ 9%. Timber Litter...Head ROS @ 10-12 ch/hr and FL @ 3-4 ft...Flanks ROS @ 1-2 ch/hr and FL @ 1-2 ft. Headfire FL's has been observed at 8-12' in shrub fuels. Single/group tree torching has occurred. Short crown fire spread has occurred on the Coon/Bear fire with inversion lifting and a Haines of 5.

ERC is predicted @ 68 today (up 2) and BI is predicted @ 64 (up 1)

.....Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is around 10%.

Probability of Ignition (shaded) will be 60% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

The Fires will continue to display moderate surface fire intensity with the possibility of single/group torching when inversion lifts and ventilation occurs. The forecasted weather will tread towards cooler temps and higher RH's at the lower elevations (under 3000')...heavier fuels have dried and will need multiple days to raise fuel moisture levels. Cloud/Smoke cover will shade fuels and decrease solar radiation...shortening burn period. Heavy fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has led to the growth of the Fires. The potential for single tree torching will remain a threat due to surface fire that has dried aerial fuels. The Fires will have the ability to make uphill runs as slope and winds become into alignment... caution on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to ¼ mile at the ridges.

Coon Fire: will continue to back/flank towards the South Fork Smith river. Good opportunity to improve lines and mop-up.

Bear Fire: will continue to back/flank north into the Siskiyou Fork, east towards Twin Peak/Doe Creek and south toward the South Fork Smith River...heads-up on head-fire runs with slope reversal.

Peak Fire: early active burning-late into the evening due to higher elevation above the inversion and lower RH's. *****Heads-up*****: if visibility improves and skies clear early...fire activity will increase sooner than yesterday.

AIR OPERATIONS:

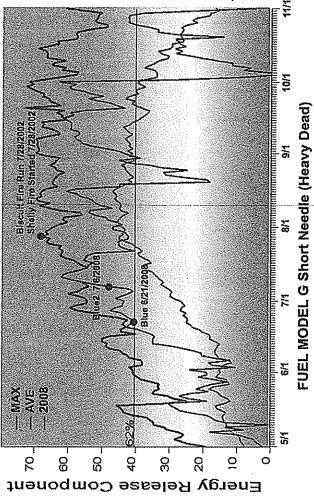

Air support may be limited due to inversion and/or gusty winds.

Local Thresholds - WATCHOUT:

behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become Combinations of any of these factors can greatly increase fire nore frequent when BI exceeds 41 and when ERC exceeds 41

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM =11.
- · Wildfires become a problem @ 50 acres on the Six Rivers NF due to opography, fuels, and accessibility ('Large fires'= 50 acres)
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area,

55% = 55th Percentile means 55% of all days observed had Maximum = Highest BI by day for 1979-2009 Graph Interpretation, Burning Index: Average = Shows Peak Fire Season

Twisp River Fire Fighter Fatalities and Injuries 72 Hour Report

Location: 4 miles northwest of Twisp, Washington

Date: 8/19/15

Activity: Initial Attack of Wildfire

Fatalities: 3

Injuries: 1

On August 19, 2015 at 1230, the Twisp River Fire was reported by the Okanogan County Sheriff's Office to the Northeast Washington Interagency Communications Center in Colville, WA. The fire was about two acres in size. Multiple resources, including Engine 642, from the Methow Valley Ranger District on the Okanogan-Wenatchee National Forest. Between 1445 and 1500, fire activ-

ity increased as winds and smoke shifted.

shifted

At 1500, dispatch was notified of an entrapment on the incident. At 1600, incident personnel reported fatalities and injuries and requested Life Flight. USFS firefighter Daniel Lyon, 25, was airlifted to Harborview Medical Center in Seattle, WA. Engine 642 was located on a

hillside about 40 feet below Woods Canyon Road. The engine was upright and burned over with three deceased USFS firefighters inside. The deceased firefighters were Tom Zbyszewski, 20, Andrew Zajac, 26 and Richard Wheeler, 31.

INCIDENT SAFETY ANALYSIS 215a

Gasquet CA-SRF-001488 - Friday, August 28, 2015

	Jusque	et CA-SRF-UU1488 - Friday, August 28, 2015
8. Location	9. Hazard	6. Control or Abatement Action (Engineering, Administrative, PPE, Avoidance, Education, etc)
All	Hazard Trees	 Follow "Hazard Tree Safety" guidelines, IRPG page 22. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights.
All	Vehicle Operations in Inclement Weather	 Be alert for potential muddy and slick road surfaces. Avoid parking on soft shoulders along roads. Stay off secondary roads in wet conditions. Increase following distance on slick road surfaces. Send a scout to evaluate roads and work area prior to personnel engagement.
All	Air Operations	 Follow "Aviation Watch-Out Situations" on page 44, IRPG. Don't plan on air resources for medical transport or resupply. Refer to page 57, IRPG for directing bucket drops. Ensure positive communication with all air resources. Beware of retardant on paved roads in fire area.
All	Chain Saw Operations	∼ Follow "Hazard Tree Safety" guidelines, IRPG page 22 ∼ Look up, Look down, Look around for hazard tree indicators. ∼ Only fell and buck trees within your expertise, and training. ∼ Follow "Procedural Felling Operations" on page 79 in IRPG. ∼ Do not fall trees during high wind events. ∼ Ensure proper use of all required PPE.
All	Steep Terrain & Rolling Debris	 Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access. Post lookouts (IRPG pg 6).
All	Driving & Traffic	~ Practice "Defensive Driving" techniques traveling on all roads and city streets. ~ Use spotters when backing. ~ Honk horn to alert personnel when backing. ~ Keep clutter off dash and inside cab. ~ Follow Driving LCES (Lights, Chock blocks, Emergency brake, Seat belts. ~ Always use headlights. ~ Yield to pedestrians and bicycles. ~ Observe posted speed limits. ~ Use the 3 second rule for following distance when driving. ~ Use chock blocks, turn wheels into hill. ~ Avoid distractions (eating, cell phones, radio). ~ Ensure that windshields are kept clean of dust and bugs.
All	Firing Operations & Devices	 Only personnel trained in the use of each device will be authorized to use firing equipment. Ensure all personnel are aware of firing operation that may affect them. Wear appropriate PPE. Ensure aerial/ground ignition plans have been adequately developed and personnel are briefed.
All	Injury & Medical Emergency	~ Assist injured employee appropriate medical care. ~ Use EMT's on Division for initial care. ~ Follow medical protocol as outlined in ICS-206 & IRPG Pgs 99-108
Ali	Poisonous Plants	∼ Identify and Avoid hazard areas. ∼ Launder clothing. ∼ Shower frequently.
ALL	Heavy Equipment Operations	 Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment and increase it to 1 1/2 times tree height when in timber. Use a spotter when backing. Avoid working below heavy equipment.
All	Fatigue & Over Exertion	 Drink 1 quart of water each hour during and after work. Rotate crews out of smoky areas. Set a reasonable work pace and allow adequate rest breaks while on the project. Stagger work crews start time to limit fatique.
ALL	Wildlife & Livestock	 Use buddy system to monitor personnel of heat related and fatigue issues. Follow work / rest guidelines. Watch out for wildlife & livestock inside fire area and along roadways. Clean up all debris and trash during each operational period.

<u>In Today's Medical Minute</u>

Feeling the Flu?

Not feeling well? Maybe you have a cold, or maybe it's the flu...

The main difference in cold symptoms and the flu is onset. Colds develop over time and have a lower severity of symptoms, whereas, flu symptoms are normally more intense and develop fever. The common cold is not normally associated with fever and they tend to resolve faster when adequate treatment and rest is available.

The flu usually starts suddenly and may include the following symptoms: Fever, Headache, General weakness, Cough, Sore throat, Runny or stuffy nose, body aches, in some cases, diarrhea and vomiting.

During the time you have symptoms, <u>you are contagious</u>. Please wash your hands often. Use Disinfecting Wipes to clean the common areas you are working in; Crew Buggy, Engine Cab, and or work station. If you are sneezing and you are traveling or working in a common space (Engine Cab or Crew Buggy) use a mask so that you do not infect your fellow firefighters.

The flu usually spreads from person to person in respiratory droplets when people who are infected, cough or sneeze. People occasionally may become infected by touching something with influenza virus on it and then touching their mouth, nose or eyes.

See the Medical Unit if:

You notice an inability to swallow.

You have a sore throat for more than five days.

You have an earache.

You have a stiff neck or sensitivity to bright lights.

Your throat hurts and you think you have a fever.

Your cold symptoms worsen after the third day. You may have a bacterial infection.

What You Can do for Fast Relief from the Flu?

Most cold and flu drugs attack symptoms, not the specific viruses. They don't cure, but can bring relief, or shorten your illness. Rest, Nutrition, and Hygiene are all important in reducing the spread and impact of colds on your crew.

Protect yourself and others against influenza. Get a flu vaccination each year.

Just so you know...

Finance Message

Due to lack of resources nationwide and the inability to obtain new resources to replace those that are reaching their maximum length of assignment, the following guidelines apply:

HEALTH, READINESS, AND CAPABILITY MUST BE CONSIDERED PRIOR TO ASSIGNING INCIDENT PERSONNEL TO BACK TO BACK ASSIGNMENTS. THE HEALTH AND SAFETY OF INCIDENT PERSONNEL AND RESOURCES WILL NOT BE COMPROMISED UNDER ANY CIRCUMSTANCES.

Federal employees, Local and out of state cooperating agencies

- 1. Obtain written approval from DIVS for extension or crew swap
- 2. Obtain written approval from home unit supervisor
- 3. See Resources Unit at ICP 4-5 days prior to 14th working day
- 4. If approved to extend, obtain extension form from DMOB
 - Extension options:
 - i. Extend to 21 days (exclusive of travel to and from incident. Time spent in staging and preposition status count towards the 21 day assignment.)
 - ii. Extend to 30 days. Inclusive of mandatory days off and exclusive of travel. (must have 2 days R&R between day 15-21)
- 5. For crew swap, bring 213 (general message) to DMOB with Operations signature, method of travel, names of <u>all personnel</u> (as it appears on their driver's license) that are replacing existing crew, and home dispatch unit contact information.
 - Note crew swap on time documents and provide to finance
 - Replacement crew must arrive on 14th day of the existing crews work assignment and be available to work the following day

Private contractors

Obtain written approval from Operations on 213 (general message) and bring to Resources Unit.

- After working 14 days you must take at least 2 days R&R unpaid and can return to incident for an additional 14 day assignment.
- At any time between day 1-14 you can swap personnel and provide information of new crew members to Check-In and Finance.

Gasquet Complex

Vehicles traveling from the Peak, Feeder, or Coon Fires to the Bear Fire, <u>MUST</u> go through weed wash prior to traveling to the Bear Fire. Vehicles traveling from base camp to any fire on the complex and back to camp do not need to weed wash until leaving the incident. As standard protocol, all vehicles must go through weed wash upon arrival at incident.

Fish screens need to be used for water withdrawal, including portable pumps. Screens are available at Supply.

Weed washing station is located at the fuel station. Weed washing is required upon arrival and demobilization for all vehicles traveling to the fire areas.

Water Treatment for Port Orford Cedar Infection

- Treat water from all water sources as follows:
 - o 1 gal bleach to 1000 gal water
- Do NOT use bleach-treated water to make retardant

Dozer Usage

- All new dozer lines or safety zones need to have archeological surveys prior to ground disturbance
- Where possible, dozer lines should use existing roads or skid trails

Please stay on roads or already disturbed sites

Do not drive in meadow areas

Limit snag falling if not needed for safety or line protection

Direct any questions regarding Natural Resources through your Division Supervisor.
