WEATHER DISCUSSION: Low pressure will remain near the west coast today and tonight with onshore flow. Occasional showers will continue this morning in the wake of last night's storm and slowly diminish in the afternoon. Another weak band of showers is possible after midnight tonight. With the onshore flow and moisture, fog will be common on the upper slopes. especially in the morning. While there will still be smoke, much of it will be suppressed by last night's rain. Moist conditions will remain today with excellent humidity recovery tonight. Temperatures will be much colder today as well.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated...driven by dead and down fuels. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 1000 hr fuels are @ 9%. Timber Litter...Head ROS @ 10-12 ch/hr and FL @ 3-4 ft...Flanks ROS @ 1-2 ch/hr and FL @ 1-2 ft. Headfire FL's has been observed at 8-12' in shrub fuels. Single/group tree torching has occurred. Short crown fire spread has occurred on the Coon/Bear fire with inversion lifting and a Haines of 5.

ERC is predicted @ 63 today (down 5) and BI is predicted @ 56 (down 8)

......Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is around 10%.

Probability of Ignition (shaded) will be 40% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

With precipitation expected overnight and into the morning hours, the Fires will display low surface fire intensity (creeping/smoldering). The forecasted weather will remain with cooler temps and higher RH's for several days following. Heavier fuels will need multiple days to raise fuel moisture levels. Cloud/Smoke cover will shade fuels and decrease solar radiation...shortening burn period. Large fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has contributed to the growth of the Fires. The Fires will have the ability to make uphill runs as slope and winds become into alignment... caution on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. Spotting distances have been observed up to ¼ mile on the ridges.

Coon Fire: will continue to back/flank towards the South Fork Smith river. Good opportunity to improve lines and mop-up.

Bear Fire: will continue to back/flank north into the Siskiyou Fork, east towards Twin Peak/Doe Creek and south toward the South Fork Smith River...heads-up on head-fire runs on south facing slope across the Siskiyou Fork.

Peak Fire: will continue to back/flank with head-fire runs on slope reversal.

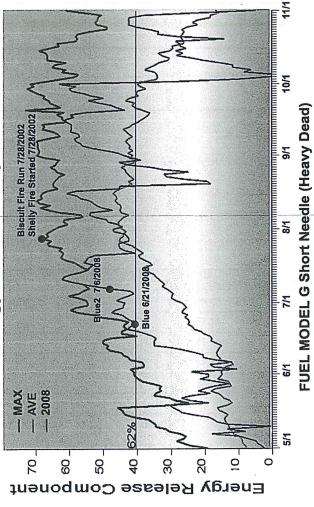

AIR OPERATIONS:

Air support may be limited due to clouds/fog and/or gusty winds.

Local Thresholds - WATCHOUT

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:
Maximum = Highest ERC by day for 1979-2010
Average = Shows Peak Fire Season
62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscujt fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM =11.
- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires'= 50 acres).
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.
 Graph Interpretation, Burning Index:

Graph interpretation, Burning index:
Maximum = Highest BI by day for 1979-2009
Average = Shows Peak Fire Season
55% = 55th Percentile means 55% of all days observed had a BI below 41.

INCIDENT SAFETY ANALYSIS 215a

Gasquet CA-SRF-001488 - Satruday, August 29, 2015

| 8. Location | 9. Hazard | 6. Control or Abatement Action (Engineering, Administrative, PPE, Avoidance, Education, etc) |
|-------------|--|--|
| All | Hazard Trees | ~ Follow "Hazard Tree Safety" guidelines, IRPG page 22. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights. |
| All | Vehicle Operations in Inclement Weather | Be alert for potential muddy and slick road surfaces. Avoid parking on soft shoulders along roads. Stay off secondary roads in wet conditions. Increase following distance on slick road surfaces. Send a scout to evaluate roads and work area prior to personnel engagement. |
| All | Air Operations | Follow "Aviation Watch-Out Situations" on page 44, IRPG. Don't plan on air resources for medical transport or resupply. Refer to page 57, IRPG for directing bucket drops. Ensure positive communication with all air resources. Beware of retardant on paved roads in fire area. |
| All | Chain Saw Operations | Follow "Hazard Tree Safety" guidelines, IRPG page 22 Look up, Look down, Look around for hazard tree indicators. Only fell and buck trees within your expertise, and training. Follow "Procedural Felling Operations" on page 79 in IRPG. Do not fall trees during high wind events. Ensure proper use of all required PPE. |
| All | Steep Terrain & Rolling Debris | Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access. Post lookouts (IRPG pg 6). |
| All | Driving & Traffic | ~ Practice "Defensive Driving" techniques traveling on all roads and city streets. |
| All | Firing Operations & Devices | Only personnel trained in the use of each device will be authorized to use firing equipmen Ensure all personnel are aware of firing operation that may affect them. Wear appropriate PPE. Ensure aerial/ground ignition plans have been adequately developed and personnel are briefed. |
| All | Injury & Medical Emergency | ~ Assist injured employee appropriate medical care. ~ Use EMT's on Division for initial care. ~ Follow medical protocol as outlined in ICS-206 & IRPG Pgs 99-108 |
| All | Poisonous Plants | ~ Identify and Avoid hazard areas. ~ Launder clothing. ~ Shower frequently. |
| ALL | Heavy Equipment Operations | Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment and increase it to 1 1/2 times tree height when in timber. Use a spotter when backing. Avoid working below heavy equipment. |
| All | Fatigue & Over Exertion | ~ Drink 1 quart of water each hour during and after work. ~ Rotate crews out of smoky areas. ~ Set a reasonable work pace and allow adequate rest breaks while on the project. ~ Stagger work crews start time to limit fatigue. ~ Use buddy system to monitor personnel of heat related and fatigue issues. ~ Follow work / rest guidelines. |

In Today's Medical Minute

The Wet Weather is Here!

Be careful out there today... It's raining and wet, so pay attention to the slip hazards that are all around you because they can lead to sprains and strains. The most common soft tissues injured are muscles, tendons, and ligaments. These injuries often occur during sports and strenuous activities resulting in sprains, strains, and contusions. Even with appropriate treatment, these injuries may require a prolonged amount of time to heal.

Sprains

A sprain is a stretch and/or tear of a ligament, a strong band of connective tissue that connect the end of one bone to another. Ligaments stabilize and support the body's joints. The areas of your body that are most vulnerable to sprains are your ankles, knees, and wrists. A sprained ankle can occur when your foot turns inward, placing extreme tension on the ligaments of your outer ankle.

Strains A strain is an injury to a muscle and/or tendons. Tendons are fibrous cords of tissue that attach muscles to the bone. Strains often occur in your foot, leg or back. Similar to sprains, a strain may be a simple stretch in your muscle or tendon, or it may be a partial or complete tear in the muscleand-tendon combination. Typical symptoms of a strain include pain, muscle spasm, muscle weakness, swelling, inflammation, and cramping.

The recommended treatment for a strains and sprains: Rice

R – Rest

1 - lce

C - Compression

E - Elevate

This should be followed by simple exercises to relieve pain and restore mobility. Surgery may be required for a more serious tear.

Just so you know...
