Incident Meteorologist

---

**WEATHER DISCUSSION:** High pressure will build over California on Saturday and Sunday, and a thermal trough will position itself over the area. This will bring much warmer and drier conditions, and an offshore flow will keep skies clear. This will also lead to gusty northeast winds during the overnight hours and poor humidity recoveries in the mountains.

---

**WEATHER FORECAST for Saturday:**

**WEATHER:** Clearing, but smoky.

**MAXIMUM TEMPERATURES:** 80 – 87 degrees valleys...74 – 80 degrees ridges.

**MINIMUM HUMIDITY:** 23 – 29 percent.

**20 FT WINDS:**

RIDGETOP – Northerly 5 to 10 mph.

SLOPE/VALLEY – Upslope/upvalley 3 to 8 mph.

**HAINES INDEX:** 4 (moderate).

**STABILITY/INVERSION:** Mixing height 8000 feet msl.

---

**OUTLOOK for Saturday Night:** Clear, but smoky. Low temperatures 55 – 60 degrees and maximum relative humidity 40 – 60%. Ridgetop winds northeast 10 to 15 mph with gusts to 25 mph. Haines Index: 4. Thermal belt 4000 – 5000 feet msl.

---

**OUTLOOK for Sunday:** Clear, but smoky. Highs temperatures 77 – 89 degrees and minimum relative humidity 21 – 27%. Ridgetop winds northerly 5 to 10 mph. Mixing height: 7500 feet msl. Haines Index: 4.

---

**EXTENDED FORECAST:** Hot and dry conditions will persist through Thursday.

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

Increased warming and drying bring excellent burning conditions. Additional solar heating, reduced RHs and lack of a marine layer should allow for an early start to the burn period. Expanded burn window should allow for more consumption as fuels have a longer timeframe to heat up and dry out. Spotting becomes a concern as brush understory becomes involved.

With line construction in incomplete burns, be positive that you are exposing the black edge and getting all the hot ash and embers inside your line.

#### SPECIFIC:

Timber Understory: Fire behavior in the Understory models should begin early. Warmer and drier conditions will expand the burn window. Expect more involvement of the understory brush and shrubs with increased intensity.

ROS: 5 to 10 ch/hr.

FL: 6 to 8 ft.

Timber Litter: Timber Litter fire behavior should be active early. Increased consumption of heavier fuels and understory may provide additional material for spots and roll out. Stay aware of rollout and upslope runs through incomplete burns.

ROS: 3 to 6 ch/hr.

FL: 2 to 3 ft.

Spotting becomes a concern with improved burn conditions. Know where your smoke is going and check for fallout.

### AIR OPERATIONS:

High pressure should hold down the marine layer and improve flying conditions.

## SAFETY

Be aware of fire in the standing timber and instability of trees and snags. Ash pits and stump holes become more of an issue the longer the fire burns in the fuel bed.

## Incident within an Incident Action Plan

### When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the initial actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

#### **Advise of the critical information needed:**

- Accident scene safety assessment and advise incoming personnel
- Number of injuries and their severity
- Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)
- Assist the injured as necessary without endangering yourself or other personnel
- Do not move trauma victims unless their safety is in jeopardy
- Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures

#### **Remain aware of surroundings and delegate personnel to monitor the main fire**

The **Division Supervisor** will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Comm and consider switching to designated Emergency Tactical (Incident Comm will notify the MEDL who will initiate the medical plan for injuries)
3. Order/delegate resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics, rescue equipment, patient transport needs, manpower)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators

## Incident within an Incident Action Plan

### Position Assignment Supportive Actions

#### Division Supervisor

- See items 1-6 on page one
- If unable to access accident/incident location, delegate command to a closer qualified resource

#### Medical Unit Leader

- Respond to Comm Unit as soon as possible
- Coordinate with Division Supervisor to ensure proper resources are rapidly ordered
- Assign a MEDL to the scene and other positions to support the response as needed
- Monitor condition updates of patient(s) and coordinate response with Operations

#### Communications Unit Leader

- Maintain clear radio traffic and monitor communications to support response
- Recommend appropriate security and investigative process
- Assess the need for critical Incident Stress Response

#### Safety Officer

- Provide for Safety personnel on scene as needed
- Recommend appropriate security and investigative process
- Assess the need for critical Incident Stress Response

#### Air Attack Supervisor

- Obtain coordinates of the emergency location
- Coordinate air-medical response
- Assist and support the designated Point of Contact with communications and coordination of the emergency response as necessary

#### IC, Command & General Staff

- Manage the emergency and direct specific responsibilities to individual positions to provide an appropriate response
- Notify the host unit and host dispatch center of the size-up information
- Constantly monitor and assess the appropriate response and adapt direction as needed
- Submit all documentation pertaining to the emergency to the Plans Chief

## Health & Safety Message

<b>Incident:</b> Gasquet Complex CA-SRF-001488	<b>Date/Op Period:</b> 8/15/15 0600-0600 DAY SHIFT
---	---

### Hazards & Risks

**Firefighter Health:** With multiple days of working on the fireline; cuts, abrasions, rashes and blisters are accumulating on your body. Prevent infections by washing your hands often, take daily showers, wash or change your clothes frequently and care for minor wounds each shift. Treatment early-on will help prevent larger medical problems later!

### **Fire Order # 6: Be Alert, Keep Calm, Think Clearly, Act Decisively**

As fatigue and complacency set in with multiple days on the fire, this fire order can be challenging to meet. Taking frequent rest breaks, eating plenty of fruits & vegetables, and staying hydrated can help alleviate the signs & symptoms of cumulative fatigue. Watch out for each other.

### **Watchout # 11: Unburned fuel between you and the main fire**

A lot of indirect fireline is being constructed on the fire. Use strategically placed lookouts to keep you informed on fire behavior and weather factors. Use hourly weather readings to monitor changing conditions. Give serious and realistic considerations to the location of escape routes and safety zones.

### **Final Reminders:**

Review medical plan and brief it to crews.  
 Look up, down & around for stuff that can hurt you.  
 Drive carefully & SLOW DOWN.  
 Work within the limits of your qualifications & abilities.  
 Evaluate risk & minimize guess work.
