INCIDENT Weather Forecast

FORECAST NO: 10

NAME OF FIRE: Gasquet Complex

PREDICTION FOR: Day Shift

SHIFT DATE: 8/21/2015

SIGNED: *Rachel Cobb*

TIME AND DATE

Rachel Cobb

FORECAST ISSUED: 1900 8/20/2015

Incident Meteorologist

WEATHER DISCUSSION: A northwesterly flow aloft will remain over the area on Friday. Due to a weak disturbance that will have moved through this flow, better mixing will allow for better clearing and solar heating. Mixing heights will therefore be higher this afternoon, leading to increased fire activity. The inversion is expected to lift around 1100. Gusty northeast winds will also be possible today, especially along exposed ridges. High pressure will return Saturday, but the thermal trough will move inland, so westerly winds will bring the marine layer back into western portions of the area.

WEATHER FORECAST for Friday:

WEATHER: Partly cloudy and smoky.

MAXIMUM TEMPERATURES: 75 – 85 degrees.

RELATIVE HUMIDITY: 20 – 25 percent.

20 FT WINDS:

RIDGETOP – Northeast 6 to 11 mph with gusts to 20 mph.

SLOPE/VALLEY – Downslope/downvalley 3 to 8 mph becoming upslope/upvalley.

HAINES INDEX: 3 (low).

STABILITY/INVERSION: Inversion lifting around 1100. Mixing height 6000 feet msl over the Coon Fire, 8000 feet msl over the Bear and south fires.

OUTLOOK for Friday Night: Partly cloudy and smoky. Low temperatures 55 – 60 degrees and maximum relative humidity 35 – 65%. Ridgetop and canyon winds will be easterly 10 to 15 mph with gusts to 25 mph. Haines Index: 4. Thermal belt 3000 - 5000 feet msl.

OUTLOOK for Saturday: Partly cloudy and smoky. Highs temperatures 75 – 85 degrees and minimum relative humidity 20 – 25%. West winds 4 to 8 mph. Inversion lifting around 1100. Mixing height: 3500 - 9500 feet msl. Haines Index: 4.

EXTENDED FORECAST: A low pressure system will bring cooler temperatures and higher humidity through next week.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated...driven by dead and down fuels. Fuels burning consist of Shrubs, Litter and Timber/Heavy Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 1000 hr fuels are @ 10%. Headfire has displayed ROS @ 10-16 chains/hr with flame lengths of 8-12 feet. Single/group tree torching has occurred. Short crown fire spread has occurred on the Coon fire with inversion lifting and a Haines of 5. Heavy fuels are holding large amounts of heat. ERC is predicted @ 68 today (up 1) and BI is predicted @ 54 (down 2)

.....Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is under 5%.

Probability of Ignition (shaded) will be 70% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

The Fires will continue to display moderate surface fire intensity with the possibility of single/group torching when inversion lifts and ventilation occurs. The forecasted weather will remain in a period of warmer temperatures and lower humidity...which have dried fuels even further from the previous days. Lighter fuels (1 hr and 10 hr) will continue to lose moisture and burn more readily. Heavy fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has led to the growth of the Fires. The potential for single tree torching will remain a threat due to surface fire that has dried aerial fuels. Increased fire activity will occur in the afternoon as solar heating and lifting of inversion becomes a factor. The Fires will have the ability to make uphill runs as slope and winds become into alignment. Be particularly cautious on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to ¼ mile at the ridges.

Coon Fire: will continue to back and flank towards the South Fork Smith river/Deer creek...west/south and southeast towards Gordon creek. Heads up on fire stacking up and moving with head fire with slope reversal.

Bear Fire: will continue to back/flank with uphill runs north-westerly towards the Bear Dipsite and 17N05 road, also southerly toward the 16N02 road.

*****Heads-up***:** if visibility improves and skies clear early...fire activity will increase sooner than yesterday.

AIR OPERATIONS:

Air support may be limited due to inversion and/or gusty winds.

SAFETY

- Identify your vulnerability on an advancing fire front when working hotspots
- Consider the potential for re-burning of available fuels
- Evaluate the Fire's potential for upslope runs
- **STOP...Stop Think Observe and Predict**

Fire Danger Rating Area 110 Energy Release Component

- Fire Danger Area 110:**
- * Smith River National Recreation Area
 - * Six Rivers National Forest
 - * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDERS)
- * 040102 Gasquet (NFDERS)
- * 040105 Ship Mountain (NFDERS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010
 Average = Shows Peak Fire Season
 62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

Fire Danger Rating Area 110 Burning Index

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.
- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ("Large fires" = 50 acres).
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009
 Average = Shows Peak Fire Season
 55% = 55th Percentile means 55% of all days observed had a BI below 41.

GASQUET COMPLEX -SAFETY MESSAGE

Safety is everyone's business...
The person in the mirror is in charge of your safety!

INCIDENT: GASQUET COMPLEX

DATE: 08/21-22/15

TIME: 0600-0600

Major Hazards and Risks:

- **Cumulative fatigue (get your rest/watch out for each other)**
- **Dehydration (whether on fire line or in camp). Dehydration is preventable.**
- **Long drive to work assignment on narrow roads.**
- **Keep speeds down: in camp, in town, on Hwy 199 and on roads to fire line.**
- **Don't be a distracted driver!(distraction proof your vehicle).**
- **Snags continue to be a major hazard, ID them, have fallers drop them if possible.**
- **If on night shift...working/driving at night, hiking in rough, steep terrain and rollout.**

Fire Order of the Day – Fight fire aggressively, having provided for safety first.

Narrative:

Steep terrain makes hiking rough, even more so at night! Watch out for rolling rocks and maintain proper spacing between crew members. Hydrate early and often. Double check your communications with your supervisor. Don't let your guard down and pay strict attention to your fire weather and fire behavior forecasts. If you receive instructions that are not clear to you, follow up by discussing it with your supervisor.

Training:

Use 5 at 2 program. Take 5 minutes at 1400 to discuss values at risk. Use 6 Minutes for Safety handout to train on.

Report Injuries

Let's face it; nobody likes to admit they are hurt or sick. But the right thing to do is to report it to your boss. It's okay, don't let peer pressure keep you from doing the right thing. Recently some firefighters did not let their boss know that they got burned on a prescribed fire. It could just as easily been this fire with as much firefighting and burnout operations we have been doing. Anyway, should you get any injury of any size and type, please let your boss know. Here is info out of Lessons Learned:

The Importance of Reporting Injuries.

It is in the employee's best interest to report injuries as soon as possible, no matter the extent of the injury.

Personal Perception. Individual employee perceptions of what a reportable injury looks like can differ greatly.

No Injury is Too Minor to Make Known.

Stress to employees that all injuries need to be brought to the supervisor's attention at which point a decision can be made on the severity of the injury and whether medical treatment is needed.

Fatigue Management

Monitor incident personnel for signs of fatigue; and adhere to work-rest guidelines, as feasible.

Things that contribute to Fatigue:

- **Carbon Monoxide/Smoke**
- **Dehydration**
- **Heat Stress**
- **Multiple days on assignment, multiple fires**
- **Poor fitness level can reduce resistance to fatigue**
- **24 hours awake affects your decision making capability like .10 blood alcohol content**

Important Message

With the tragedy yesterday in Washington, to members of our extended family, we just wanted to remind you of some important information: We know that this type of incident is obviously felt by the families, friends, and coworkers of the fallen and injured. It is also felt by our families and friends. This may sound strange, but how many times has your assignment changed and you didn't have the chance to let them know until after the change occurred? Do they know you are still on the same fire as yesterday? Always remember that the dangers that we see as part of our daily job are seen by outsiders (family and friends) as very frightening and life changing. Please take the time to contact those close to you and let them know that you are safe and doing fine. One simple phone call, email, or text message can mean the world to those who care about you.

Thank you

Recommendations from the Centers of Disease Control and Prevention

Handwashing is like a "do-it-yourself" vaccine—it involves five simple and effective steps (Wet, Lather, Scrub, Rinse, Dry) you can take to reduce the spread of diarrheal and respiratory illness so you can stay healthy. Regular handwashing, particularly before and after certain activities, is one of the best ways to remove germs, avoid getting sick, and prevent the spread of germs to others. It's quick, it's simple, and it can keep us all from getting sick. Handwashing is a win for everyone, except the germs.

Washing hands with soap and water is the best way to reduce the number of germs on them in most situations. If soap and water are not available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.

Water Treatment for Port Orford Cedar Infection

- Treat water from **all** water sources as follows:
 - 1 gal bleach to 1000 gal water
- Do **NOT** use bleach treated water to make retardant

Dozer Usage

- All new dozer lines or safety zones need to have archeological surveys prior to ground disturbance
- Where possible, dozer lines should use existing roads or skid trails

Please stay on road or already disturbed sites

Do Not drive in meadow areas

Limit snag falling if not needed for safety or line protection

Direct any questions regarding Natural Resources through your Division Supervisor.
