## INCIDENT Weather Forecast

FORECAST NO: 11

NAME OF FIRE: Gasquet Complex

PREDICTION FOR: Day Shift

SHIFT DATE: 8/22/2015

SIGNED: *Rachel Cobb*

TIME AND DATE

FORECAST ISSUED: 1900 8/21/2015

Rachel Cobb

Incident Meteorologist

---

**WEATHER DISCUSSION:** High pressure will be over the area on Saturday, but the thermal trough will have moved inland, so westerly winds will prevail during the afternoon. This will bring marine air inland, resulting in lower daytime temperatures and higher relative humidity. The high pressure ridge will shift eastward on Sunday and the area will be under a southwest flow. This will continue the gradual cooling and moistening trend.

---

**WEATHER FORECAST for Saturday:**

**WEATHER:** Mostly clear but smoky.

**MAXIMUM TEMPERATURES:** 73 – 83 degrees.

**RELATIVE HUMIDITY:** 20 – 30 percent.

**20 FT WINDS:**

**RIDGETOP** – Easterly 7 to 12 mph with gusts to 25 mph shifting westerly 3 to 8 mph in the afternoon.

**SLOPE/VALLEY** – Downslope/downvalley 3 to 8 mph becoming upslope/upvalley.

**HAINES INDEX:** 4 (low).

**STABILITY/INVERSION:** Inversion lifting around 1100. Mixing heights will be 3500 feet msl over the Coon Fire, 7000 feet msl over the Feeder and Peak fires, and 9000 feet msl over the Bear Fire.

---

**OUTLOOK for Saturday Night:** Mostly clear but smoky. Low temperatures 58 – 63 degrees and maximum relative humidity 40 – 70%. Easterly winds 3 to 6 mph. Haines Index: 2. Thermal belt 3000 - 4000 feet msl.

---

**OUTLOOK for Sunday:** Mostly clear but smoky. Highs temperatures 70 – 80 degrees and minimum relative humidity 25 – 35%. West-southwest winds 3 to 7 mph. Inversion lifting around 1100. Mixing height: 3000 - 7500 feet msl. Haines Index: 3.

---

**EXTENDED FORECAST:** A low pressure system in the east Pacific will continue to cause increased cloud cover, mild temperatures and moderate relative humidity through next week.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER: 19</b>	<b>TYPE OF FIRE: Wildfire</b>
<b>FIRE NAME: Gasquet Complex</b>	<b>OPERATIONAL PERIOD: 8/22-23/15 0600-0600</b>
<b>DATE ISSUED: 8/21/15</b>	<b>TIME ISSUED: 1800 hrs</b>
<b>UNIT: SRF, Smith River NRA</b>	<b>SIGNED: Richard Gonzales, FBAN</b> 

### INPUTS

#### WEATHER SUMMARY:

See Weather Forecast for specific information

Sky: Partly Cloudy and Smoky ... Temps near 83° ...RH around 20%....

Winds (20')... Valley/Slope: upslope/upvalley 3-8 mph...Ridge: morning gusty East winds, afternoon West 3-8 mph

LAL 1... Haines 4

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

The Fires main influence has been fuel and topography dominated...driven by dead and down fuels. Fuels burning consist of Shrubs, Litter and Timber/Heavy Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 1000 hr fuels are @ 10%. Headfire has displayed ROS @ 10-16 chains/hr with flame lengths of 8-12 feet. Single/group tree torching has occurred. Short crown fire spread has occurred on the Coon fire with inversion lifting and a Haines of 5. Heavy fuels are holding large amounts of heat. ERC is predicted @ 67 today (down 1) and BI is predicted @ 58 (up 4)

.....Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83\*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is under 5%.

Probability of Ignition (shaded) will be 70% into receptive fuels for the better part of the operational period.

### SPECIFIC

##### All Divisions:

The Fires will continue to display moderate surface fire intensity with the possibility of single/group torching when inversion lifts and ventilation occurs. The forecasted weather will remain in a period of warmer temperatures and lower humidity...which have dried fuels even further from the previous days. Lighter fuels (1 hr and 10 hr) will continue to lose moisture and burn more readily. Heavy fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has led to the growth of the Fires. The potential for single tree torching will remain a threat due to surface fire that has dried aerial fuels. Increased fire activity will occur in the afternoon as solar heating and lifting of inversion becomes a factor. The Fires will have the ability to make uphill runs as slope and winds become into alignment. Be particularly cautious on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to ¼ mile at the ridges.

**Coon Fire:** will continue to back and flank towards the South Fork Smith river/Deer creek...west/south and southeast towards Gordon creek. Heads up on fire stacking up and moving with head fire with slope reversal.

**Bear Fire:** will continue to back/flank with uphill runs north-westerly towards the Bear Dipsite and 17N05 road, also southerly toward the 16N02 road. Watch out for drainages that align with easterly winds...upslope runs.

**\*\*\*Heads-up\*\*\*:** if visibility improves and skies clear early...fire activity will increase sooner than yesterday.

#### AIR OPERATIONS:

Air support may be limited due to inversion and/or gusty winds.

### SAFETY

- Identify your vulnerability on an advancing fire front when working hotspots
- Consider the potential for re-burning of available fuels
- Evaluate the Fire's potential for upslope runs
- **STOP...Stop Think Observe and Predict**

## Fire Danger Rating Area 110 Energy Release Component

## Fire Danger Rating Area 110 Burning Index

### Fire Danger Area 110:

- \* Smith River National Recreation Area
- \* Six Rivers National Forest
- \* NW CA - Region 5

### Weather Stations Used:

- \* 040101 Camp Six (NFDERS)
- \* 040102 Gasquet (NFDERS)
- \* 040105 Ship Mountain (NFDERS)

### Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

#### Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010  
Average = Shows Peak Fire Season  
62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

### PAST EXPERIENCE / LOCAL KNOWLEDGE:

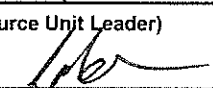

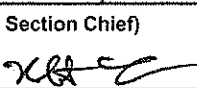

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.
- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires' = 50 acres).
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

#### Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009  
Average = Shows Peak Fire Season  
55% = 55th Percentile means 55% of all days observed had a BI below 41.

# GASQUET COMPLEX-SAFETY MESSAGE

We are ALL Accountable and Responsible for SAFE behaviors

SATURDAY AUGUST 22/23, 2015

0600-0600

## MAJOR HAZARDS

- Cumulative fatigue (get your rest/watch out for each other).
- Dehydration (whether on fire line or in camp). Dehydration is preventable.
- Long drive to work assignment on narrow windy roads. Roads to Coon Fire are dusty too.
- Fresh retardant on steep paved roads in the fire area.
- Keep speeds down: in camp, in town, on Hwy 199 and on roads to fire line.
- Don't be a distracted driver!(distraction proof your vehicle).
- Snags continue to be a major hazard, ID them, have fallers drop them when possible.
- If on night shift...working/driving at night, hiking in rough, steep terrain/rollout and burning ops.

## Fire Order of the Day –Know what the fire is doing at all times!

- **Snags** – Maintain situational awareness when working in heavily timbered areas. Post lookouts where needed and conduct risk analysis when engaging in these types of situations.
- **Check your People** – Ensure crews are staying hydrated, drink 3 to 1 ratio of water to sports drink. Take plenty of water and Gatorade with you.
- **Post Lookouts:** Steep, rugged terrain with lots of timber. Vantage points may be difficult to obtain. Post multiple look outs and establish TRIGGER POINTS.
- **Communications:** Review 205 for changes and if necessary set up human repeaters to assist with consistent radio communications. Communication problems should be noted and passed along to DIVS.

## Miscellaneous Safety Issues from Others:

(as told to your incident safety officer)

- Residents stopped Div. C and complained of fire vehicles speeding on the French Hill Road.
- Div. C stated that French Hill Road to DP 24 needs dust abatement (OPS, Ground Support and County Roads are working on getting that fixed.
- AIR OPS let Safety know that retardant drops supporting burning operations are getting on paved roads causing a slipping hazard for vehicles.
- People sleeping in the parking areas.
- One DIVS let us know that a rooster woke him up at 0300 here at base and he wanted to wring it's neck. He said he would pay the owner \$100 for the rooster and then take it on a long drive and let it out.

## Driving Safety:

- Watch speeds on roads, there are tight turns, steep drop offs and fire traffic.
- Potentially unstable shoulders due to excessive driving of fire equipment.
- Fast citizen vehicles on Hwy 199.
- Utilize a traffic pattern as needed.
- Start the day with a clean windshield and side mirrors. Drive with your lights on.
- Stay alert of your surroundings; take note of turn outs and possible safety zones.

If you have safety concerns, we are listening!

## **In Today's Medical Minute**

### Wound Care:

Skin wounds do happen. Knowing how to care for wounds can spare you from infection down the road. Skin wounds need thorough cleaning to reduce the risk of infection and scarring to promote healing. Follow these quick and easy steps the next time.

Try to stop the bleeding before cleaning the wound. Mild to moderate bleeding during the cleaning usually occurs. Wash the wound with a large amount of soap and water to remove all the dirt, debris, and bacteria from the wound. A mild soap, such as Ivory dishwashing soap, is best. After cleaning, stop the bleeding by applying direct pressure and elevating the wound if necessary. If some dirt or other debris remains in the wound, repeat the cleaning process. If need be, use clean tweezers to remove debris and then clean it again. Once clean, cover the wound and then clean your hands.

The idea behind cleaning the wound is to avoid infection and to promote the healing process. Infections such as Staph bacteria, including MRSA, are some of the most common causes of skin infections in the United States. Most of these skin infections are minor (such as pustules and boils) and can be treated without antibiotics. However, staph bacteria also can cause serious infections (such as surgical wound infections, bloodstream infections, and pneumonia). So keep the wound clean! Keep it covered! And keep your hands clean. These simple steps should help cut down your risk of skin infections and the possibility of infecting others.

Thank you!

## Resource Advisors

August 19, 2015

### Water Treatment for Port Orford Cedar Infection

- Treat water from **all** water sources as follows:
  - 1 gal bleach to 1000 gal water
- Do **NOT** use bleach treated water to make retardant

### Dozer Usage

- All new dozer lines or safety zones need to have archeological surveys prior to ground disturbance
- Where possible, dozer lines should use existing roads or skid trails

Please stay on road or already disturbed sites

Do Not drive in meadow areas

Limit snag falling if not needed for safety or line protection

Direct any questions regarding Natural Resources through your Division Supervisor.
