OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated...driven by dead and down fuels. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 1000 hr fuels are @ 9%. Timber Litter...Head ROS @ 10-12 ch/hr and FL @ 3-4 ft...Flanks ROS @ 1-2 ch/hr and FL @ 1-2 ft. Headfire FL's has been observed at 8-12 ft in shrub fuels. Single/group tree torching has occurred. Short crown fire spread has occurred on the Coon/Bear fire with inversion lifting and a Haines of 5.

ERC is predicted @ 66 today (same) and BI is predicted @ 63 (up 5)

.....Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is around 10%.

Probability of Ignition (shaded) will be 60% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

The Fires will continue to display moderate surface fire intensity with the possibility of single/group torching when inversion lifts and ventilation occurs. The forecasted weather will tread towards cooler temps and higher RH's at the lower elevations (under 3000')...heavier fuels have dried and will need multiple days to raise fuel moisture levels. Cloud/Smoke cover will shade fuels and decrease solar radiation...shortening burn period. Heavy fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has led to the growth of the Fires. The potential for single tree torching will remain a threat due to surface fire that has dried aerial fuels. The Fires will have the ability to make uphill runs as slope and winds become into alignment...caution on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to ¼ mile at the ridges.

Coon Fire: will continue to back/flank towards the South Fork Smith river. Good opportunity to improve lines and mop-up.

Bear Fire: will continue to back/flank south towards Siskiyou Fork, east towards Twin Peak/Doe Creek and south towards South Fork Smith River...heads-up on head-fire runs with slope reversal.

Peak Fire: early active burning-late into the evening due to higher elevation above the inversion and lower RH's.

*****Heads-up***:** if visibility improves and skies clear early...fire activity will increase sooner than yesterday.

AIR OPERATIONS:

Air support may be limited due to inversion and/or gusty winds.

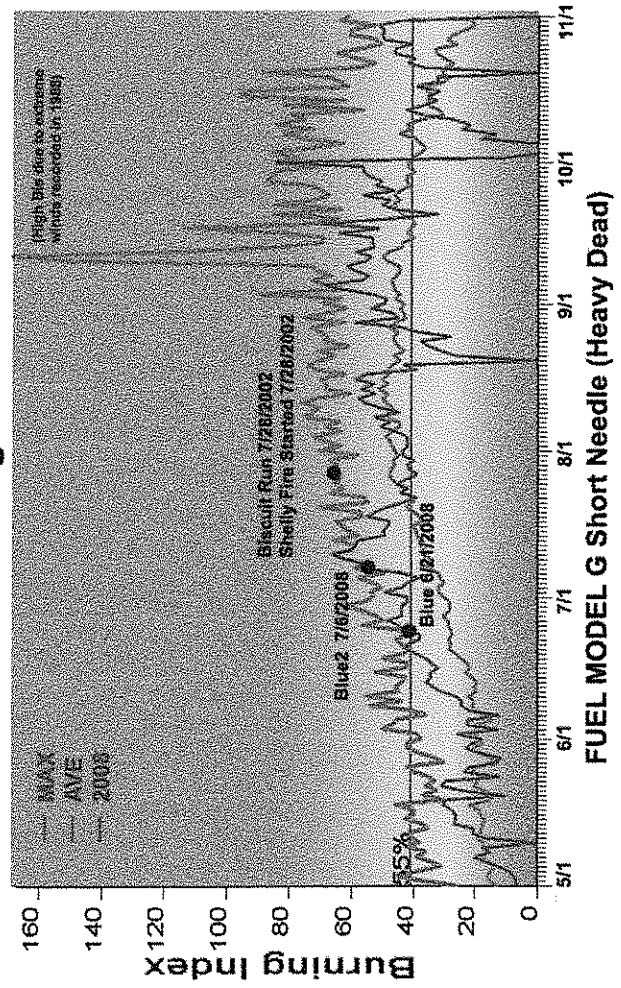

SAFETY

- Consider the potential for re-burning of available fuels

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010
 Average = Shows Peak Fire Season
 62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.
- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ("Large fires" = 50 acres).
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009
 Average = Shows Peak Fire Season
 55% = 55th Percentile means 55% of all days observed had a BI below 41.

In Today's Medical Minute

Poison Oak:

Poison oak has been and continues to be a problem out on the line here on the Gasquet Complex. Once skin contact has been made with poison oak, the oils (Urushiol) will transfer to the skin. The oils begin to penetrate in minutes. It is completely bound to the skin within 8 hours. It's the oil inside the plant that causes the allergic reaction to roughly 70% of the population.

You may develop any or all of the following:

- Red Rash
- Blisters
- Swelling

If you know you've been exposed, cleanse the area immediately with plain soap and water to remove the oil before it has a chance to bind to the skin. To remove the oil from your skin, scrub the area for several minutes, but do not break the skin, then rinse with cool water for several minutes. Once the area has been cleansed you may need to apply a topic ointment or seek further medical treatment with Frontline Medical.

Products That Help Remove oils from the Skin:

Tecnu
Tecnu Extreme
Zanfel
Poison Oak Soap
Cortaid Poison Cleanser
Dawn Dishwashing Liquid

Topical treatments for the rash

RhuliGel
Cortaid
Hydrocortisone Cream or Gel
Calamine Lotion
Caladryl Lotion
Benadryl Cream

Just so you know...

Thank you!

Human Resources Message

Correcting Biased Communication Patterns

With increased diversity there comes a need for increased sensitivity about how we talk to one another. We can offend someone by a slip of the tongue. Becoming more sensitive in our dealings with one another contributes to a better work environment.

The Human Resource Specialist (HRSP) is Alan Seago, and the HRSP Trainee is Sunny Santos. Alan's cell phone is (707) 315-6537; Sunny's is (707) 562-8659. They work in the same trailer as the Finance Chief, Comp Claims, and the CTSP Computer Specialist.
