OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated... driven by dead and down fuels. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 1000 hr fuels are @ 12%. Timber Litter... Head ROS @ 10-12 ch/hr and FL @ 3-4 ft... Flanks ROS @ 1-2 ch/hr and FL @ 1-2 ft. Headfire FL's has been observed at 8-12' in shrub fuels. Single/group tree torching has occurred. Short crown fire spread has occurred on the Coon/Bear fire with inversion lifting and a Haines of 5.

ERC is predicted @ 34 today (down 29) and BI is predicted @ 49 (down 7)

.....Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is around 10%.

Probability of Ignition (shaded) will be 20% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

With precipitation received yesterday and today, the Fires will display low surface fire intensity (creeping/smoldering). The forecasted weather will remain with cooler temps and higher RH's for several days following. Heavier fuels will need multiple days to raise fuel moisture levels. Cloud/Smoke cover will shade fuels and decrease solar radiation... shortening burn period. Large fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has contributed to the growth of the Fires. The Fires will have the ability to make uphill runs as fuels dry out and slope/winds become into alignment... caution on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. Spotting distances have been observed up to ¼ mile on the ridges.

Coon Fire: Good opportunity to hold and mop-up lines.

Bear Fire: will continue to back/flank north into the Siskiyou Fork, east towards Twin Peak/Doe Creek and south toward the South Fork Smith River... heads-up on head-fire runs on south facing slopes across the Siskiyou Fork towards Broken Rib Mountain.

Peak Fire: will continue to back/flank with head-fire runs on slope reversal.

AIR OPERATIONS:

Air support may be limited due to clouds/fog and/or gusty winds.

SAFETY

- Consider the potential for re-burning of available fuels
- **STOP...Stop Think Observe and Predict**

Fire Danger Rating Area 110 Energy Release Component

- Fire Danger Area 110:**
- * Smith River National Recreation Area
 - * Six Rivers National Forest
 - * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDERS)
- * 040102 Gasquet (NFDERS)
- * 040105 Ship Mountain (NFDERS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010
 Average = Shows Peak Fire Season
 62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

Fire Danger Rating Area 110 Burning Index

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.
- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ("Large fires" = 50 acres).
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009
 Average = Shows Peak Fire Season
 55% = 55th Percentile means 55% of all days observed had a BI below 41.

Rhabdo: An Overview...

Rhabdomyolysis, what is it? Rhabdo is a serious issue that occurs due to direct or indirect muscle injury. It's a result from the death of muscle fibers which are released into the bloodstream. This can lead to complications such as kidney failure. This occurs when the kidneys cannot remove waste and concentrated urine. However, prompt treatment often brings a good outcome. Here's what you need to know...

There are many causes of Rhabdo. The most common causes include:

- Extreme muscle strain, especially in someone who is an untrained athlete. This can happen in elite athletes too, however. And it can be more dangerous if there is more muscle mass to break down.
- A crush injury such as from an auto accident, fall, or building collapse
- A very high body temperature (hyperthermia) or heat stroke
- Bacterial infections leading to toxins in tissues or the bloodstream (sepsis)

Blood and urine tests are needed to look for products of muscle breakdown for a diagnosis of Rhabdo. Some common signs and symptoms include:

- Muscle pain, especially in the shoulders, thighs or lower back
- Muscle weakness or trouble moving arms or legs
- Abdominal pain
- Fever, with nausea or vomiting
- Confusion, dehydration, or loss of consciousness
- Dark red or brown urine; reduced or no urine output

Treatments:

See Frontline Medical if you suspect Rhabdo signs and symptoms. A trip to the hospital is required for testing and treatment. The key to full recovery is prompt medical care...

Just so you know...

Gasquet Complex

Vehicles traveling from the Peak, Feeder, or Coon Fires to the Bear Fire, **MUST** go through weed wash prior to traveling to the Bear Fire. Vehicles traveling from base camp to any fire on the complex and back to camp do not need to weed wash until leaving the incident. As standard protocol, all vehicles must go through weed wash upon arrival at incident.

Fish screens need to be used for water withdrawal, including portable pumps. Screens are available at Supply.

Weed washing station is located at the fuel station. Weed washing is required upon arrival and demobilization for all vehicles traveling to the fire areas.

Water Treatment for Port Orford Cedar Infection

- Treat water from **all** water sources as follows:
 - 1 gal bleach to 1000 gal water
- Do **NOT** use bleach-treated water to make retardant

Dozer Usage

- All new dozer lines or safety zones need to have archeological surveys prior to ground disturbance
- Where possible, dozer lines should use existing roads or skid trails

Please stay on roads or already disturbed sites

Do not drive in meadow areas

Limit snag falling if not needed for safety or line protection

Direct any questions regarding Natural Resources through your Division Supervisor.

Appendix A

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does not **block** the water bar outlet.

Recommended spacing for waterbars on firelines.

| Fireline slope % | Maximum Distance Apart (feet) |
|------------------|-------------------------------|
| 1-5 | 200 |
| 6-20 | 125 |
| 21-40 | 60 |
| 41-60 | 40 |
| >60 | 25 |

Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.
