Winds will be fairly light and from the northwest. The marine layer will be present overnight, but dry air aloft will move in with poor recovery likely on the mid and upper slopes in a return to thermal belts.

# **OUTPUTS**

### **FIRE BEHAVIOR**

### **GENERAL:**

The Fires main influence has been fuel and topography dominated...driven by dead and down fuels. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 4, 9, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated @ 90%. 100 hr fuels are @ 17 % and 1000 hr fuels are @ 12%. Timber Litter...Single/group tree torching has occurred. Short crown fire spread had occurred on the Coon/Bear fire with inversion lifting and a Haines of 5.

ERC is predicted @ 32 today (down 2) and BI is predicted @ 40 (down 9)

......Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83\*, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Scattered Tree Mortality is around 10%.

Probability of Ignition (shaded) will be 20% into receptive fuels for the better part of the operational period.

### **SPECIFIC**

### All Divisions:

With precipitation received yesterday and today, the Fires will display low surface fire intensity (creeping/smoldering). The forecasted weather will remain with cooler temps and higher RH's for several days following. Heavier fuels will need multiple days to lower fuel moisture levels. Cloud/Smoke cover will shade fuels and decrease solar radiation...shortening burn period. Large fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has contributed to the growth of the Fires. The Fires will have the ability to make uphill runs as fuels dry out and slope/winds become into alignment... caution on South, Southwest and Southeast slopes coupled with any southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. Spotting distances have been observed up to ¼ mile on the ridges.

Coon Fire: Good opportunity to hold and mop-up lines.

Bear Fire: will continue to back/flank north into the Siskiyou Fork, east towards Twin Peak/Doe Creek and south toward the South Fork Smith River...heads-up on head-fire runs on south facing slopes across the Siskiyou Fork towards Broken Rib Mountain.

Peak Fire: will continue to back/flank with head-fire runs on slope reversal.

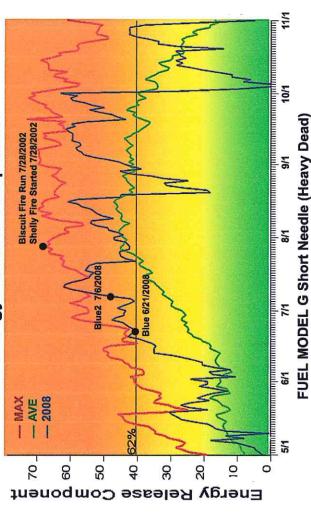

### AIR OPERATIONS:

Air support may be limited due to clouds/fog and/or gusty winds.

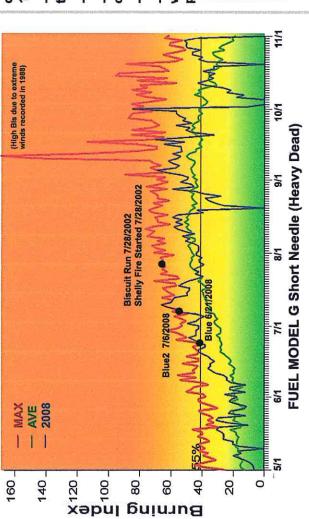

### SAFFTY

- Consider the potential for re-burning of available fuels

# Fire Danger Rating Area 110 Energy Release Component

# Fire Danger Rating Area 110 Burning Index

Fire Danger Area 110:

- \* Smith River National Recreation Area
- Six Rivers National Forest
  - NW CA Region 5

Weather Stations Used:

- \* 040101 Camp Six (NFDRS)
  - 040102 Gasquet (NFDRS)
- 040105 Ship Mountain (NFDRS)

# Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:
Maximum = Highest ERC by day for 1979-2010
Average = Shows Peak Fire Season
62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

# PAST EXPERIENCE / LOCAL KNOWLEDGE:

- -On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM =11.
- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires'= 50 acres).
- This area is ocean-influenced, expect abrupt changes in weather.
- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
- Average slope is 65-70%, Fires are topography-driven.
- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:
Maximum = Highest BI by day for 1979-2009
Average = Shows Peak Fire Season
55% = 55th Percentile means 55% of all days observed had a BI below 41.

DD/	HAZARDOUS ACTIONS /	
DIV	CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	Hazard Trees	Follow hazard tree safety guidelines IRPG P.22 Post lookouts, use a spotter in mop up areas Don't park under or near trees Establish trigger points to disengage Hazard zone is 2.5 diameter of tree
L G E F	Downhill Line Construction	IRPG P.9 Conducted only as a last resort Direct line when possible Decision made after proposed line is scouted by supervisor Coordinate LCES for all parties involved Line will not be next to a chute, must be anchored
G E L	Direct line construction	Ensure escape routes and safety zones Post lookouts Maintain crew spacing Flag snags and avoid
L F NC REHB	Heavy equipment operation	Ensure communication is established with operation Use hand signals if needed Maintain 50'-100' exclusion area around equipment and height of timber Use a spotter when backing Aviod working below heavy equipment operations
ALL	Driving	Keep speeds at or below posted speed limit. Use headlights at all times Use back up personnel Use chock blocks Avoid distractions, maintain spacing if multiple vehicles Always use seatbelts
NC SC	Indirect line construction	Post lookouts, identify escape routes and safety zones (IRPG pg. 7). Review "Strategy/Indirect Attack" (IRPG pg. 77). Establish trigger point
E G F NC SC	Steep terrain, rolling debris	IRPG P.6 Maintain spacing on the line, 8' to 10' Do not work above personnel Call out any object that rolls out, loudly Evaluate the need to place people in difficult in terrain
E F G L	Chain saw operations	Follow Hazard Tree safety guidelines IRPG P.22 Plan your cuts and use spotters Step back, pause and see if your cut is going as planned Always use all of your safety gear Stay alert for wind changes
F G W	Aircraft operations	Keep personnel out of drop zones. Use air-to-ground frequency to communicate with aircraft. Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective. Don't engage in "heli-mopping". Eliminate unnecessary pilot exposure

Vehicles traveling from the Peak, Feeder, or Coon Fires to the Bear Fire, <u>MUST</u> go through weed wash prior to traveling to the Bear Fire. Vehicles traveling from base camp to any fire on the complex and back to camp do not need to weed wash until leaving the incident. As standard protocol, all vehicles must go through weed wash upon arrival at incident.

Fish screens need to be used for water withdrawal, including portable pumps. Screens are available at Supply.

Weed washing station is located at the fuel station. Weed washing is required upon arrival and demobilization for all vehicles traveling to the fire areas.

Water Treatment for Port Orford Cedar Infection

- Treat water from all water sources as follows:
  - 1 gal bleach to 1000 gal water
- Do NOT use bleach-treated water to make retardant

# Dozer Usage

- All new dozer lines or safety zones need to have archeological surveys prior to ground disturbance
- Where possible, dozer lines should use existing roads or skid trails

Please stay on roads or already disturbed sites

Do not drive in meadow areas

Limit snag falling if not needed for safety or line protection

Direct any questions regarding Natural Resources through your Division Supervisor.

# **Effective Waterbars**

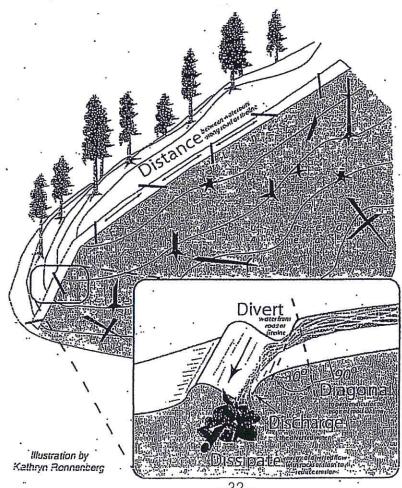

When locating and building water bars, place them the right distance apart, at a diagonal to the fireline, so that they divert, then discharge, then dissipate the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does not block the water bar outlet.

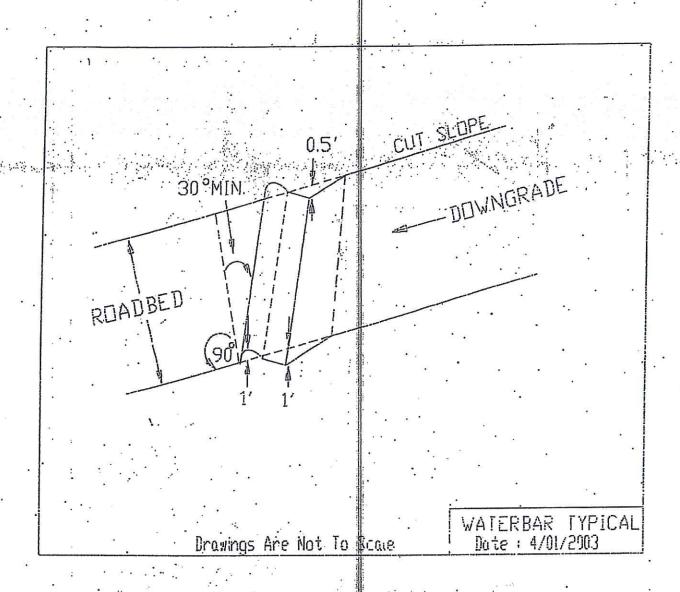

# Recommended spacing for waterbars on firelines.
