OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fire has been topography dominated. Fuels burning consist of Shrubs, Timber Litter and Heavy Dead/Down (FM 6, 9, 10). Large dense stands of mixed Conifer are present throughout. Single/group tree torching has occurred. Live Fuel Moisture is estimated @ 90%. 100 hr fuels are @ 13 % and 1000 hr fuels are @ 14%.

ERC is predicted @ 49 today (up 9) and BI is predicted @ 67 (up 12)

Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83°, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Probability of Ignition will be 60 to 70% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

Fuels continue to dry out and warm up. Fine fuels will respond and start to carry fire. Expect more activity as RH drops **below 30%**. Steeper slopes may respond more quickly as they receive more solar radiation. Be prepared for areas that were quiet to have smokes and need attention.

Fuel Type	Head ROS	Head Flame Length	Backing ROS	Backing Flame Length
Cover<50%	25-30 ch/hr	6-8 ft	1-2 ch/hr	1-2 ft
Cover>50%	10-15 ch/hr	7-9 ft	1 ch/hr	1-2 ft
Litter	6-10 ch/hr	3-4 ft	1 ch/hr	1 ft

Fire will run upslope when factors align. Be prepared if your line is above the fire. Roll out and run up are a common occurrence. Spotting may occur as fire tops out and is exposed to stronger Ridgetop winds. Up to ¼ mile has been observed.

Bear Fire: will continue to back/flank north into the Siskiyou Fork, east towards Twin Peak/Doe Creek and south toward the South Fork Smith River...heads-up on head-fire runs on south facing slopes across the Siskiyou Fork towards Wounded Knee and Broken Rib.

Peak Fire: will continue to back/flank into Eight Mile creek. Limited activity except on the north side.

AIR OPERATIONS:

Air support will have early opportunity...depending upon smoke conditions.

SAFETY

- Be prepared for increased activity in areas that were quiet.
- Be concerned with long term fire in forest fuels. Stability can be an issue.

Fire Danger Rating Area 110 Energy Release Component

Fire Danger Rating Area 110 Burning Index

Fire Danger Area 110:

- * Smith River National Recreation Area
- * Six Rivers National Forest
- * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDRS)
- * 040102 Gasquet (NFDRS)
- * 040105 Ship Mountain (NFDRS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010

Average = Shows Peak Fire Season

62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelly fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.

- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ("Large fires" = 50 acres).

- This area is ocean-influenced, expect abrupt changes in weather.

- Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.

- Average slope is 65-70%, Fires are topography-driven.

- Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009

Average = Shows Peak Fire Season

55% = 55th Percentile means 55% of all days observed had a BI below 41.

Accident / Incident Within the Incident Action Plan

When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the initial actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

Advise of the critical information needed:

- **Accident scene safety assessment and advise incoming personnel**
- **Number of injuries and their severity**
- **Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)**
- **Assist the injured as necessary without endangering yourself or other personnel**
- **Do not move trauma victims unless their safety is in jeopardy**
- **Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures**

Remain aware of surroundings and delegate personnel to monitor the main fire

The Division Supervisor will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Communications. Incident Comm will notify the MEDL who will initiate the medical plan for injuries.
3. Order resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators

---------------------------------------------------	-------------------------------------------------------------

Hazards & Risks

Fire Order # 1: Keep informed on fire weather conditions & forecasts.

The weather forecast is calling for changing conditions. Designate someone to take hourly weather readings and broadcast them across the Divisions. Pay attention to the afternoon trends and keep in mind the 40% RH fire behavior trigger point.

Watch Out Situations # 14 & # 15: Weather getting hotter & drier; Wind increases or changes direction.

Stay alert to changing weather conditions; not only for fire behavior reasons but for firefighter health and fatigue issues. **STAY HYDRATED & TAKE REST BREAKS!**

Forest Visitors, Hunters & Public Safety

The Labor Day holiday weekend is upon us. Be extra diligent to folks on the highway, forest roads & trails out and about. Hunters are also venturing into the woods; stay low, keep moving and zig-zag ☺

Weed Wash: All vehicles must go through weed wash upon arrival at incident, before Demob and before traveling to the Bear Fire if they have been on the Peak, Feeder or Coon Fires. Weed wash is located at the fueling station

Fish Screens: Screens are required for water drafting, including portable pumps. Screens are available in supply.

Water Treatment: Treatment of water from all sources is required to prevent spread of Port Orford Cedar root rot.

- Treat water from all sources with 1 gallon bleach to 1,000 gallons water
- Do **NOT** treat water used with retardant

Dozer Use:

- All dozer lines and safety zones require archaeological clearance prior to construction.
- Dozer lines should use existing roads or skid trails where possible.

Please stay on roads or already disturbed sites

Do not drive in meadows

Limit snag falling, unless needed for safety or line protection.

Direct questions regarding Natural Resources through your Division Supervisor

Effective Water Bar Construction

When constructing waterbars, place them the right distance apart, at a diagonal to the fireline. They should divert, discharge and dissipate the energy of the flowing water. Be sure to make them deep enough to be durable and such that soil does not block the outlet.

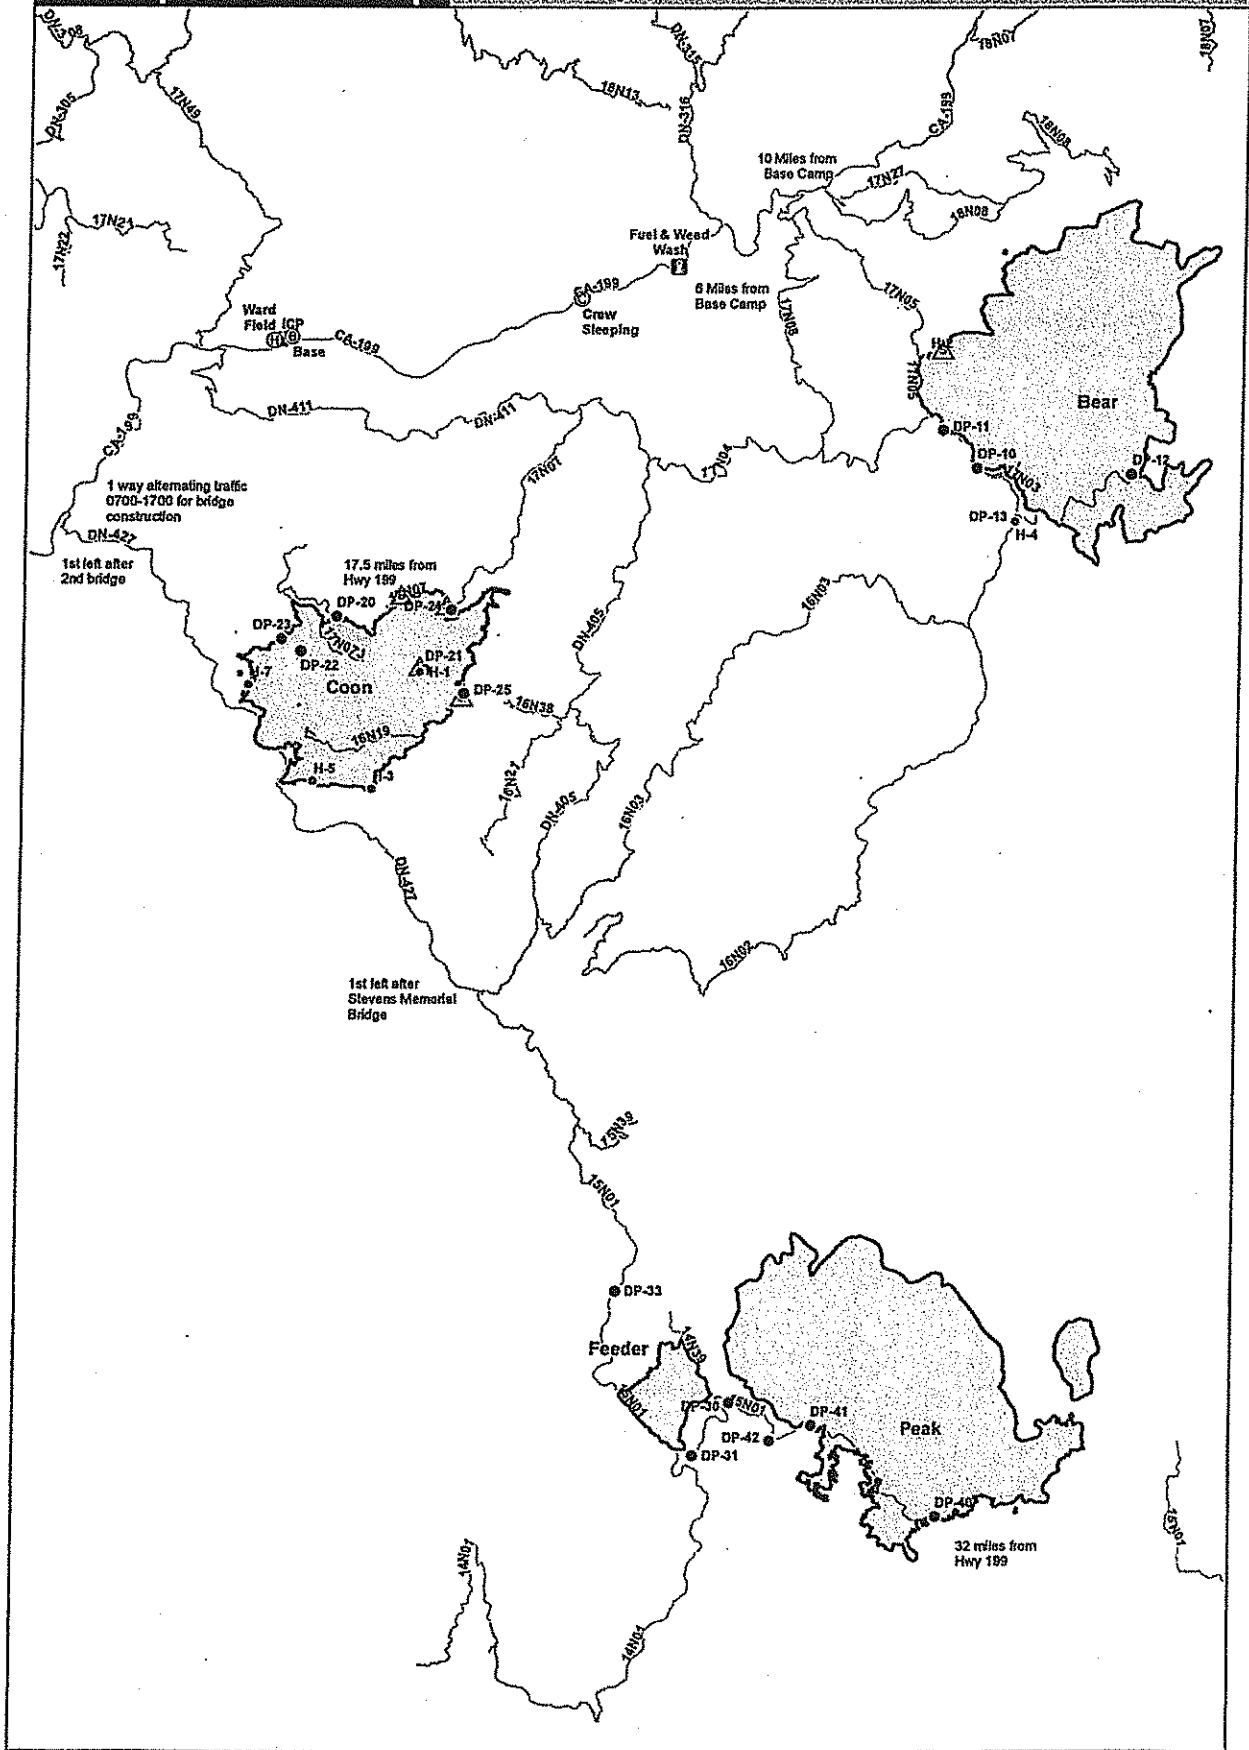

Recommended Spacing for Fireline Waterbars	
Fireline Slope %	Maximum Distance (Feet)
1-5	200
6-20	125
21-40	60
41-60	40
> 60	25

Waterbars may be closer. When in doubt, put in more.
Waterbars should be at least 2 pulaski (4-6") widths wide and 12-24" high for handlines
