WEATHER DISCUSSION: * HOT, DRY, AND UNSTABLE CONDITIONS WILL CONTINUE TODAY AND FRIDAY*****

Today and Friday will see high temperatures a degree or two warmer than the previous day and afternoon relative humidities lowering into the 14-23 percent range. As has been the case the past couple of days, poor humidity recoveries will start each operational period. The atmosphere will become unstable after about 1400 and allow smoke to rise in the vertical and now be transported to the north and northwest. The Haines Index will be a 5 today and a 6 on Friday. Watch for the morning inversion to trap smoke over the lower half of the fire and caused reduced visibilities before smoke lifts and disperses out.

WEATHER FORECAST (TODAY):

WEATHER: Sunny. Areas of smoke in the valleys through 1200 before lifting and gradually dispersing over the fire.
MAX TEMP: Elev. 1000 ft: 93-99 F Elev 4-5000 ft: 80-86 F
MIN RH: Elev. 1000 ft: 15-20% Elev 4-5000 ft: 17-23%

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire activity continues to grow as burning conditions improve. Green islands and areas of incomplete consumption could lead to reburns as heat builds up and ignites fuels previously dried. Single/group tree torching has occurred.

Live Fuel Moisture is estimated @ 90%. 100 hr fuels are @ 8 % and 1000 hr fuels are @ 12%.

ERC is predicted @ 59 today (up 3) and BI is predicted @ 55 (up 6)

Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83°, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Probability of Ignition will be 75% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

Select areas in Bear Basin continue to display significant activity. Expect activity to continue as RH drops towards 20%. Poor to only moderate RH recovery will allow activity to start earlier in the burn period. Be prepared for areas that were quiet to have smokes and need attention. Increased smoke production has led to a return of Smoke inversions early in the day, lifting out by midafternoon.

Fuel Type	Head ROS	Head Flame Length	Backing ROS	Backing Flame Length
Cover<50%	25-30 ch/hr	6-8 ft	1-2 ch/hr	1-2 ft
Cover>50%	10-15 ch/hr	7-9 ft	1 ch/hr	1-2 ft
Litter	6-10 ch/hr	3-4 ft	1 ch/hr	1 ft

Fire still has potential to run upslope when factors align. Be prepared if your line is above the fire. Roll out and run up are a common occurrence. Spotting may occur as fire tops out and is exposed to stronger Ridgetop winds. Up to ¼ mile has been observed. Previous areas of spotting need to be checked for sleepers.

Bear Fire: will continue to back/flank north up towards Wounded Knee and Broken Rib, east down Twin Peak/Doe Creek and south toward the South Fork Smith River...heads-up on head-fire runs on south facing slopes across the Siskiyou Fork towards Wounded Knee and Broken Rib.

Peak Fire: will continue to back/flank into Eight Mile creek. Limited activity except on the north side.

AIR OPERATIONS:

Smoke inversions in Bear Butte Basin will limit visibility below approx. 5,000 ft. May improve in the afternoon.

SAFETY

- Be heads up for unstable trees and snags while mopping up. Keep eyes up in crowns to look for widow makers and crown movement.
- Be aware of fire below you with unburned fuel between you and the fire.

Fire Danger Rating Area 110 Energy Release Component

Fire Danger Rating Area 110 Burning Index

Fire Danger Area 110:

- * Smith River National Recreation Area
- * Six Rivers National Forest
- * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDRS)
- * 040102 Gasquet (NFDRS)
- * 040105 Ship Mountain (NFDRS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010

Average = Shows Peak Fire Season

62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 and burned onto the SRF. On July 28 it doubled again to 15000+ ac. AIs on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FM = 11.

- Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ("Large fires" = 50 acres).

- This area is ocean-influenced, expect abrupt changes in weather.

- Watch out for East wind events which greatly influence fire activity and are common contributor to large fires.

- Average slope is 65-70%, Fires are topography-driven.

- Other Watchouts not related to weather: Heavy brush component; small fire will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.

Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 1979-2009

Average = Shows Peak Fire Season

55% = 55th Percentile means 55% of all days observed had a BI below 41.

Accident / Incident Within the Incident Action Plan

When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the initial actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

Advise of the critical information needed:

- **Accident scene safety assessment and advise incoming personnel**
- **Number of injuries and their severity**
- **Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)**
- **Assist the injured as necessary without endangering yourself or other personnel**
- **Do not move trauma victims unless their safety is in jeopardy**
- **Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures**

Remain aware of surroundings and delegate personnel to monitor the main fire

The Division Supervisor will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Communications. Incident Comm will notify the MEDL who will initiate the medical plan for injuries.
3. Order resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators

Health & Safety Message

Hazards & Risks

Ash Pit Hazards

With multiple days & weeks of smoldering tree stumps, ASH PITS become a real hazard to firefighters. Use extreme caution when walking and working in & around areas of stump holes. Do not direct water streams directly into the middle of the pit, but use fog stream to cool down, than mix in mineral soil. Root systems associated with the stump can also burn through so approach with caution.

Apparatus Maintenance & Safety

Your daily travels to and from the fireline create wear & tear on your fire apparatus. Continue to do your daily vehicle inspections and preventive maintenance checks to ensure tires, brakes, fluid levels, windshields, etc. are serviceable. This is not only for your safety, but your entire crew riding with you.

Personal Health

The medical unit is reporting a dramatic increase in folks complaining of cold & flu-like symptoms. Take preventive measures to protect yourself such as daily showers, hand washing, washing your PPE, avoid spitting in common areas and using disinfectant wipes to clean door handles, hand rails, etc.

Consume plenty of fluids to include juice drinks, fruits & vegetables.

COVER YOUR MOUTH WHEN YOU COUGH & SNEEZE!

Weed Wash: All vehicles must go through weed wash upon arrival at incident, before Demob and before traveling to the Bear Fire if they have been on the Peak, Feeder or Coon Fires. Weed wash is located at the fueling station

Fish Screens: Screens are required for water drafting, including portable pumps. Screens are available in supply.

Water Treatment: Treatment of water from all sources is required to prevent spread of Port Orford Cedar root rot.

Effective Water Bar Construction

When constructing waterbars, place them the right distance apart, at a diagonal to the fireline. They should divert, discharge and dissipate the energy of the flowing water. Be sure to make them deep enough to be durable and such that soil does not block the outlet.

Recommended Spacing for Fireline Waterbars	
Fireline Slope %	Maximum Distance (Feet)
1-5	200
6-20	125
21-40	60
41-60	40
> 60	25

Waterbars may be closer. When in doubt, put in more.
Waterbars should be at least 2 pulaski (4-6") widths wide and 12-24" high for handlines
