FORECAST ISSUED: 09/13/2015 2000

NAME OF FIRE: Gasquet Complex
SHIFT Day **UNIT:** CA-SRF
SIGNED: Eric Evenson
Incident Meteorologist

WEATHER DISCUSSION: Cooler temperatures and higher humidities are expected today as a cold front approaches the area this afternoon. There may be some isolated showers after 1500 but these will likely stay east of our fires. Gusty ridgetops are expected today, first from the northeast in the morning and then the northwest in the afternoon. Good humidity recoveries are expected tonight. The cooling trend with higher humidities continues Tuesday with high temperatures about 5 degrees cooler than yesterday and afternoon relative humidities up about 5 percent. The most noticeable change comes Wednesday when a trough of low pressure brings a stronger cold front across the fire area. A widespread wetting rain is expected over the entire fire area, especially Wednesday afternoon and night, with total rainfall of 0.25" to 0.75".

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Expect a downturn in activity as relative humidity stays up after decent recovery overnight. Large areas of residual heat may still want to move, but should exhibit lesser intensities. Spotting potential reduced.

Live Fuel Moisture is estimated @ 90%. 100 hr fuels are @ 7 % and 1000 hr fuels are @ 11%.

ERC is predicted @ 60 today (down 1) and BI is predicted @ 57 (up 2)

Local threshold for large growth: 20' winds over 8 mph, RH less than 33%, Temps over 83°, 1000 hr FM less than 14%, BI/ERC exceeds 41 (refer to Pocket Card in IAP).

Probability of Ignition will be 50% into receptive fuels for the better part of the operational period.

SPECIFIC

Bear Fire:

Fire still has potential to clean up pockets. Keep fire squared up as it moves south towards Twin Peaks to limit chances of slope runs and spotting. Fire at Buck Lake has the North wind to hold it in place. Expect activity to reduce as humidities stay higher through the day.

Fuel Type	Head ROS	Head Flame Length	Backing ROS	Backing Flame Length
Cover<50%	25-30 ch/hr	6-8 ft	1-2 ch/hr	1-2 ft
Cover>50%	10-15 ch/hr	7-9 ft	1 ch/hr	1-2 ft
Litter	6-10 ch/hr	3-4 ft	1 ch/hr	1 ft

Peak Fire:

Expect North side and spot to continue to back into Eight Mile Creek. Buck Creek side will continue to back into Buck Creek. Slope and Wind alignment could push west side to DP30 if green fuel is present. Winds may help early. Expect activity level to decrease with higher humidities through the day.

AIR OPERATIONS:

Smoke inversions in Bear Butte Basin will limit visibility below approx. 5,000 ft. May improve in the afternoon.

SAFETY

- Don't let the weather change fool you. Fire still has potential to run slopes if factors align. Continue to pay attention to the inversion, if present, and the wind shifting in the afternoon.

Fire Danger Rating Area 110 Energy Release Component

- Fire Danger Area 110:
- * Smith River National Recreation Area
 - * Six Rivers National Forest
 - * NW CA - Region 5

Weather Stations Used:

- * 040101 Camp Six (NFDRS)
- * 040102 Gasquet (NFDRS)
- * 040105 Ship Mountain (NFDRS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 8 mph; RH less than 33%; Temperature over 83; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 41 and when ERC exceeds 41.

Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 1979-2010
Average = Shows Peak Fire Season
62% = 62nd Percentile means 62% of all days observed had an ERC below 41.

Fire Danger Rating Area 110 Burning Index

PAST EXPERIENCE / LOCAL KNOWLEDGE:

- On July 27, 2002, the Sour Biscuit fire doubled in size to approx. 7,000 ac and burned onto the SRF. On July 28 it doubled again to 15000+ ac. Also, on July 28th, the Shelley fire started. On that day ERC = 68, BI = 63, and 1000FMI = 11.
 - Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires' = 50 acres).
 - This area is ocean-influenced, expect abrupt changes in weather.
 - Watch out for East wind events which greatly influence fire activity and are a common contributor to large fires.
 - Average slope is 65-70%, Fires are topography-driven.
 - Other Watchouts not related to weather: Heavy brush component; small fires will offer high resistance to control and exhaust crews quickly. Poison Oak prevalent in area.
- Graph Interpretation, Burning Index:**
Maximum = Highest BI by day for 1979-2009
Average = Shows Peak Fire Season
55% = 55th Percentile means 55% of all days observed had a BI below 41.

Accident / Incident Within the Incident Action Plan

When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the initial actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

Advise of the critical information needed:

- **Accident scene safety assessment and advise incoming personnel**
- **Number of injuries and their severity**
- **Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)**
- **Assist the injured as necessary without endangering yourself or other personnel**
- **Do not move trauma victims unless their safety is in jeopardy**
- **Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures**

Remain aware of surroundings and delegate personnel to monitor the main fire

The Division Supervisor will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Communications. Incident Comm will notify the MEDL who will initiate the medical plan for injuries.
3. Order resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators

Hazards & Risks

Human Factor Barriers to Situation Awareness

Please take time to review these factors (Pg. x, xi IRPG) that may interfere with our ability to comprehend the whole situational picture we may be faced with:

Low experience level with local factors

Distractions from primary task

Fatigue

Stress reactions

Hazardous attitudes

Firefighter Health: With multiple days of working on the fireline; cuts, abrasions, rashes and blisters are accumulating on your body. Prevent infections by washing your hands often, take daily showers, wash or change your clothes frequently and care for minor wounds each shift. Early treatment will help prevent larger medical problems later!

Watchout # 11: Unburned fuel between you and the main fire

Use strategically placed lookouts to keep you informed on fire behavior and weather factors. Use hourly weather readings to monitor changing conditions. Give serious and realistic considerations to the location of escape routes and safety zones.

Final Reminders:

Review medical plan and brief it to crews.

Drive carefully & SLOW DOWN.

Work within the limits of your qualifications & abilities.

Evaluate risk & minimize guess-work.

Camp Song

*We have been up here too darn long in Gasquet!
We've been through some wild weather that sure
got nasty,*

*The porta-potties get mighty drafty,
The food makes you happy as well as gassy,
Soon we'll all need rhinoplasty
From smoke that has made our voices raspy!*

*But through it all we've become a family,
Stayed classy and become a little crafty,*

Here in Good 'Ol Gasquet.

We love Gasquet!

Dozer Use:

- All dozer lines and safety zones require archaeological clearance prior to construction.
- Dozer lines should use existing roads or skid trails where possible.

Please stay on roads or already disturbed sites

Do not drive in meadows

Limit snag falling, unless needed for safety or line protection.

Effective Water Bar Construction

When constructing waterbars, place them the right distance apart, at a diagonal to the fireline. They should divert, discharge and dissipate the energy of the flowing water. Be sure to make them deep enough to be durable and such that soil does not block the outlet.

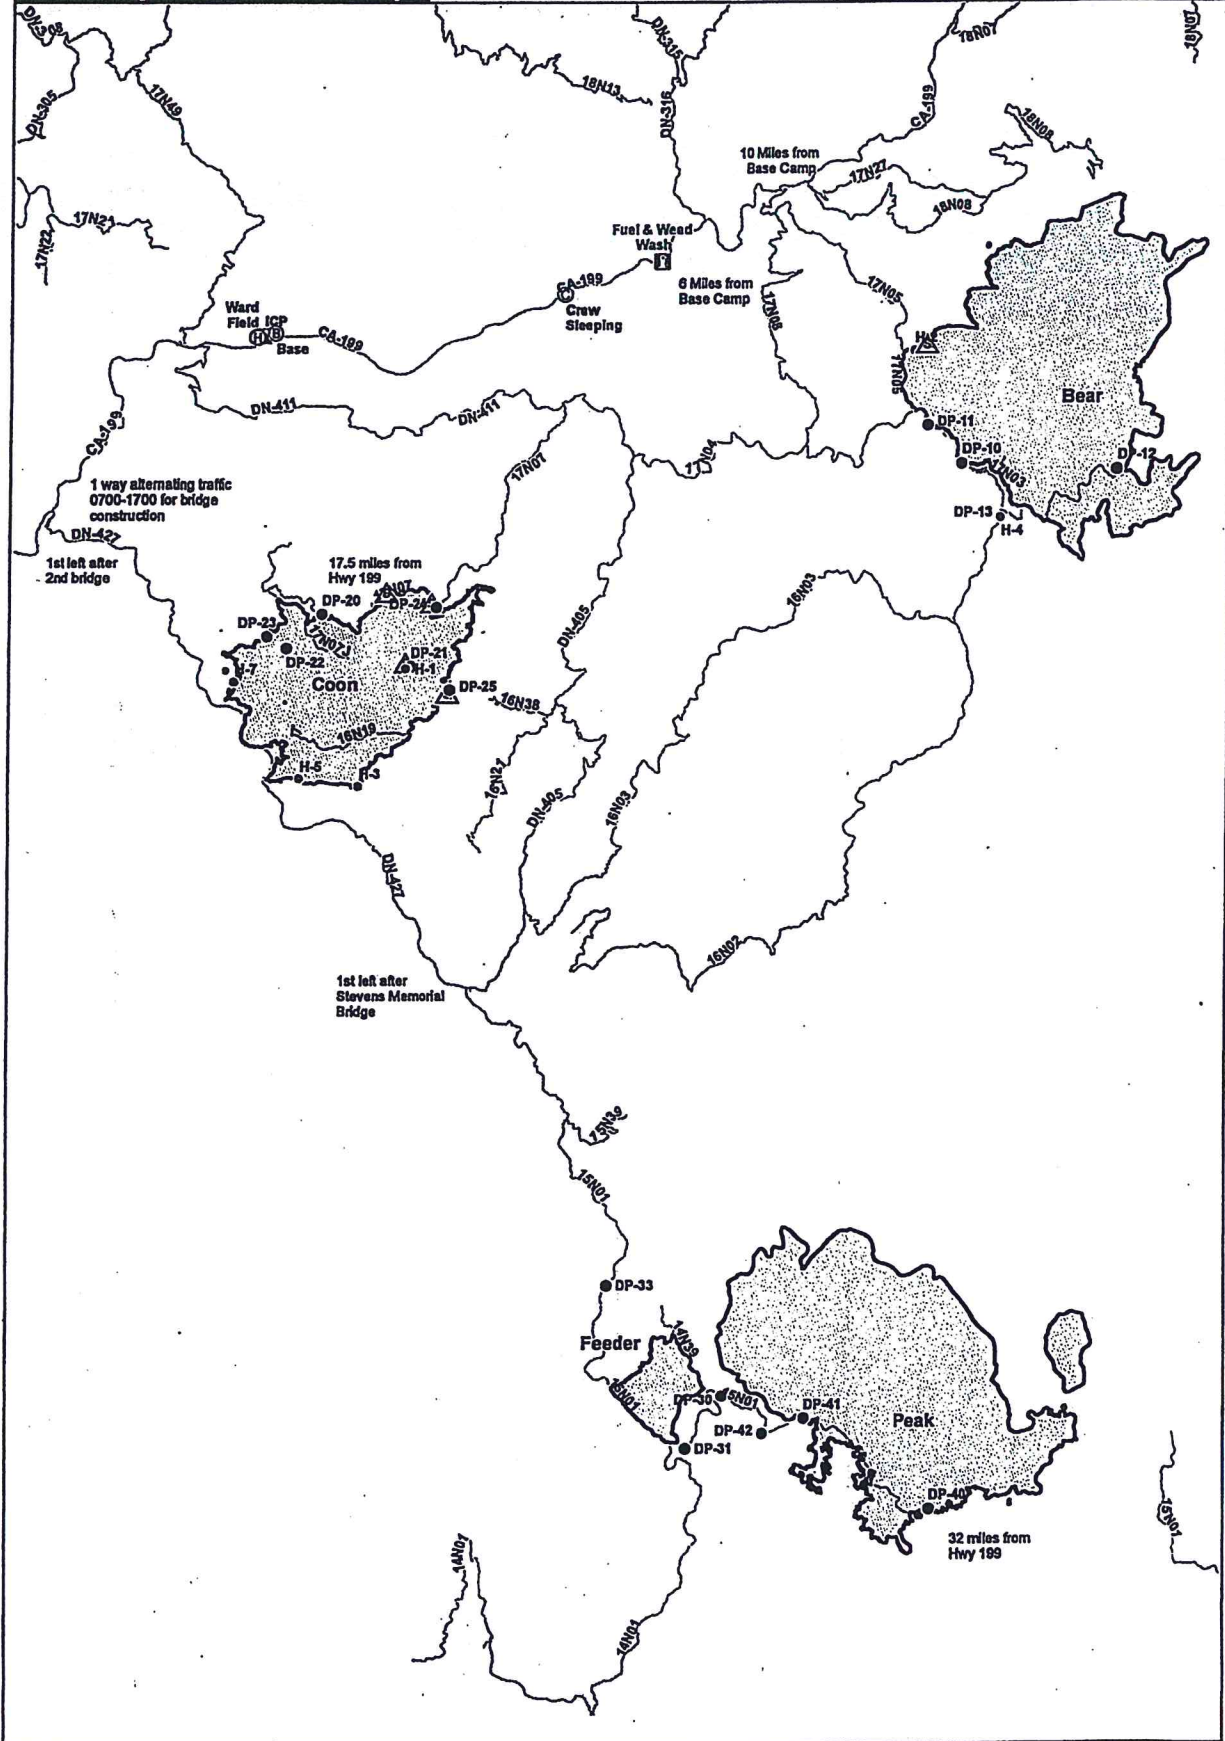

Recommended Spacing for Fireline Waterbars	
Fireline Slope %	Maximum Distance (Feet)
1-5	200
6-20	125
21-40	60
41-60	40
> 60	25

Waterbars may be closer. When in doubt, put in more.
Waterbars should be at least 2 pulaski (4-6") widths wide and 12-24" high for handlines
