WEATHER DISCUSSION: The cooling trend with higher humidity continues today with high temperatures about 5 degrees cooler than Monday and relative humidity up 5-10 percent. Good overnight humidity recovery should continue for the next few days. The most noticeable change comes Wednesday when a trough of low pressure brings a stronger cold front across the fire area. Cooler temps with cloudy skies and a widespread wetting rain is expected over the entire fire area for Wednesday with total rainfall of 0.25" to 0.75". Isolated locations may receive 1 – 2 inches of rain creating slick/muddy condition with possible hazards for heavy equipment/remote locations.

WEATHER SUMMARY: ***See attached Fire Weather Forecast***

Discussion: Cooling trend with higher humidity continues today. Areas of fog/smoke lifting after 1200.

Weather: Partly cloudy with a 20% chance of rain in the afternoon.

Max Temp: 68-73° at 1000 feet; 58-64° 4-5000 feet

Min RH: 40-45% at 1000 feet; 45-50% 4-5000 feet

FIRE BEHAVIOR

GENERAL

Expect the fire behavior to be minimal today due to cool temperature and high humidity. Fire spread will primarily be slow upslope, backing, and flanking with low flame lengths. Some isolated torching may occur. Ship Mtn. ERC for September 14 was 52, predicted for September 15 is 54.

SPECIFIC FIRE BEHAVIOR

Open timber with understory: potential worst-case surface fire spread (wind/slope alignment) will be 5-10 chains/hour with flame length 4-6 feet. Backing fire rate of spread to 2 chains/hour. Maximum spotting distance less than 1/10 mile. Probability of ignition at the peak of the burning period will be 30-40%.

Closed Timber with litter understory: potential worst-case surface fire spread will be 3-4 chains/hour with flame length 3-4 feet. Backing fire to 2 chains/hour. Spotting distance less than 1/10 mile. Probability of ignition will be 30-40%.

Areas of Concern:

Bear Fire: the fire will continue to burn at low spread rates in the Doe Flat/Devils Punchbowl area in Division I. Increasing southwest winds late this afternoon through Tuesday night/Wednesday morning may cause significant fire spread in this area.

Peak Fire: fire movement will include continued backing into Eightmile Creek and into Buck Creek in Division L. Exposed slopes northeast of the Feeder Fire in Division L may be impacted late today and overnight by increasing southwest winds.

AIR OPERATIONS

Air operations may be limited in the morning due to poor visibility caused by fog or low clouds.

Sunrise: 06:27

Sunset: 20:05

SAFETY

Pay attention to changes in weather during the day. Ensure someone is assigned to take weather observations on a regular basis and relay that information, as a minimum, to others on your assigned Division. Be especially aware of wind direction and speed.

SAFETY MESSAGE

Planning for Safety

- Working in high-risk environments requires effective planning to protect personnel from the hazards they may face.
- You should have tactical, safety and communication plans which work in concert with one another.
- Each plan should include primary, alternate, contingency, and emergency components which are known by all personnel.
- Changing from your primary plan should be a red flag that your safety may become compromised.

MAJOR HAZARDS AND RISKS

Be sure all elements of your safety plan are in place prior to engagement

Transition Day

- Today you may have a new supervisor.
- Please recognize that there may be new people on the incident who you can help during this transition by sharing your Situational Awareness and other information you have gathered to help make this transition seamless.
- The mission of NorCal Team 2 is to provide everything essential for you to safely and effectively accomplish the incident objectives.
- Please feel free to contact any team member about how we can most effectively support your needs.

Steps To Protect Yourself From Illnesses

- Wash your hands often
- Avoid touching your eyes, nose, or mouth, germs spread this way
- Try to avoid close contact with sick people
- Practice good health habits. Get plenty of sleep drink plenty of fluids, and eat healthy food
- Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it
- If you are sick with flu-like illness, separate that person from the rest of your crew and others, seek treatment at the medical unit.

Weed Wash: All vehicles must go through weed wash upon arrival at incident, before Demob and before traveling to the Bear Fire if they have been on the Peak, Feeder or Coon Fires. Weed wash is located at the fueling station

Fish Screens: Screens are required for water drafting, including portable pumps. Screens are available in supply.

Water Treatment: Treatment of water from all sources is required to prevent spread of Port Orford Cedar root rot.

- Treat water from all sources with 1 gallon bleach to 1,000 gallons water
- Do NOT treat water used with retardant

Dozer Use:

- All dozer lines and safety zones require archaeological clearance prior to construction.
- Dozer lines should use existing roads or skid trails where possible.

Please stay on roads or already disturbed sites

Do not drive in meadows

Limit snag falling, unless needed for safety or line protection.

Effective Water Bar Construction

When constructing waterbars, place them the right distance apart, at a diagonal to the fireline. They should divert, discharge and dissipate the energy of the flowing water. Be sure to make them deep enough to be durable and such that soil does not block the outlet.

Recommended Spacing for Fireline Waterbars	
Fireline Slope %	Maximum Distance (Feet)
1-5	200
6-20	125
21-40	60
41-60	40
> 60	25

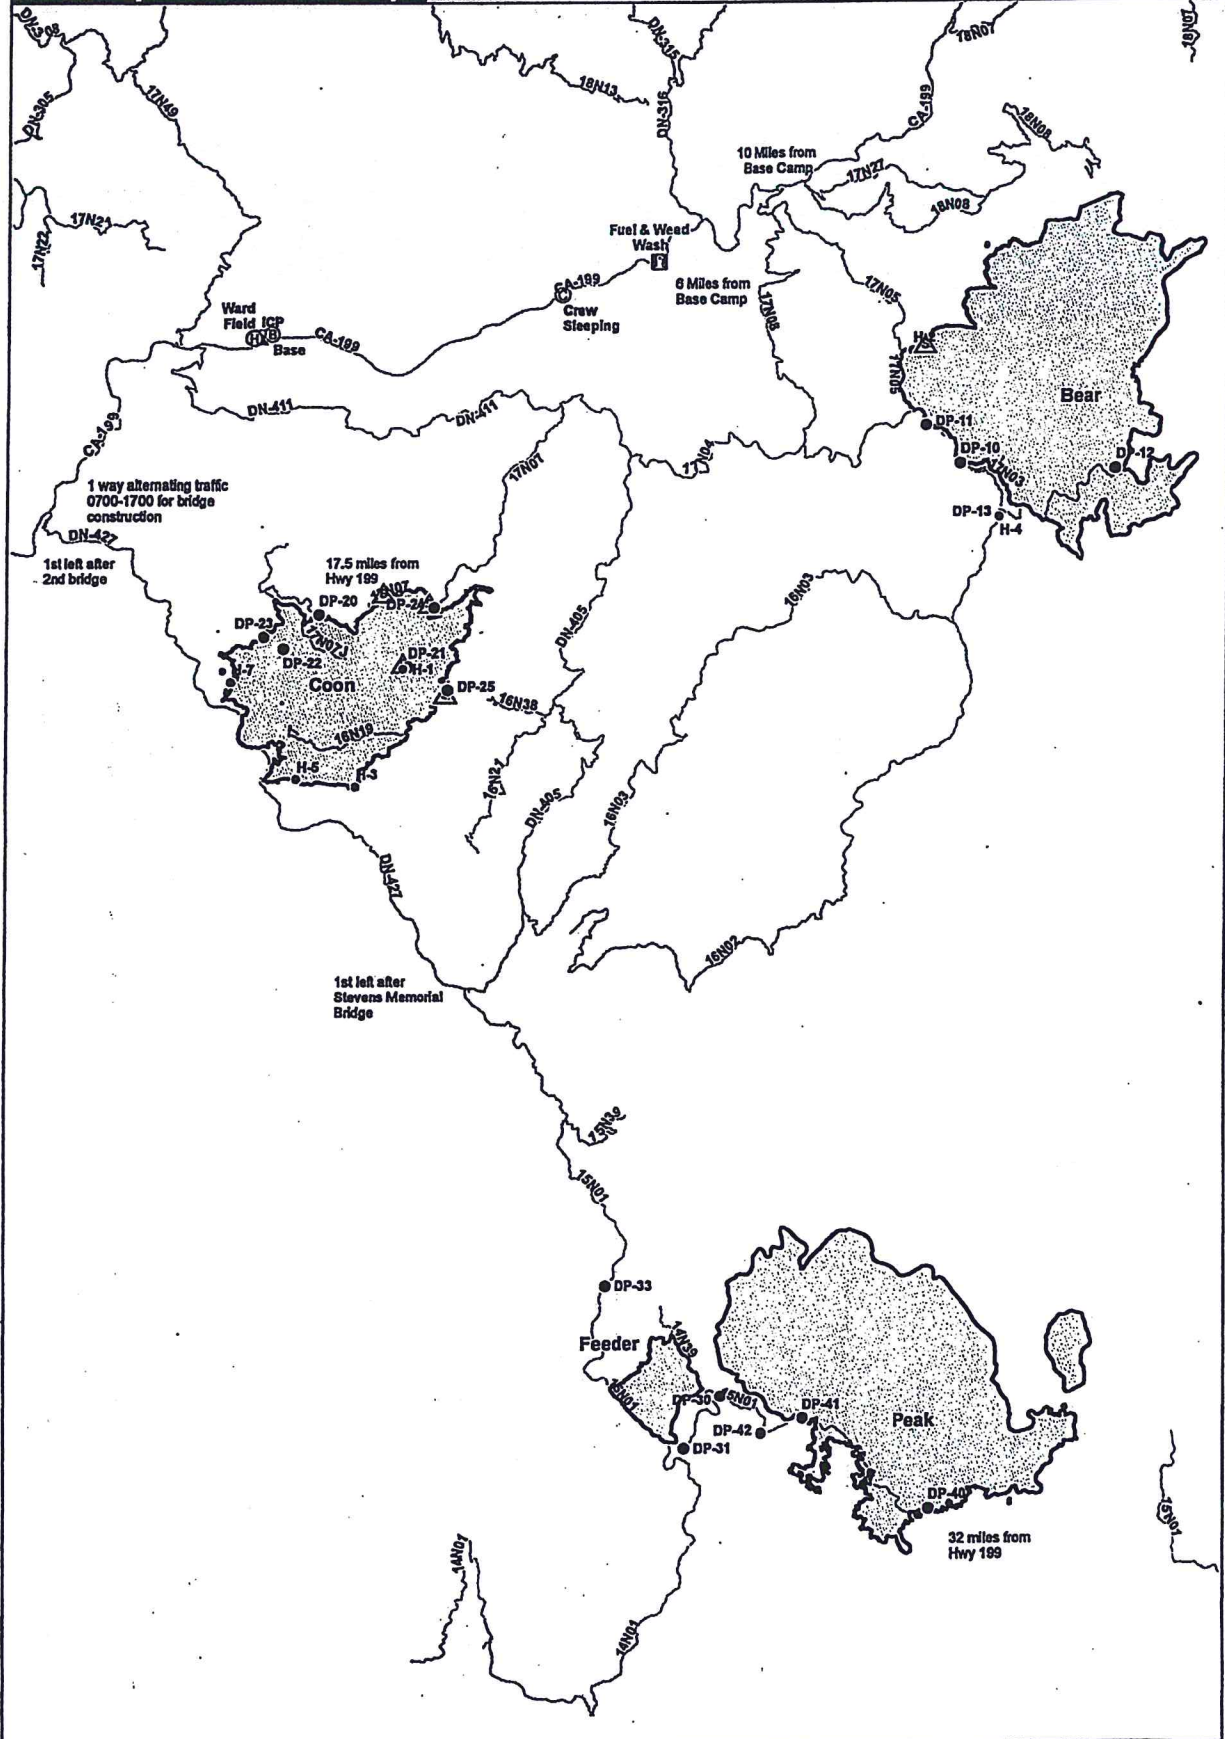

Waterbars may be closer. When in doubt, put in more.

Waterbars should be at least 2 pulaski (4-6") widths wide and 12-24" high for handlines
