HOT and DRY THIS WEEKEND!!!

WEATHER DISCUSSION:

High pressure will continue to build over the region bringing above normal temperatures and low **after**noon humidity values. As high pressure strengthens, the overnight inversion will also strengthen leading to much lower humidity recoveries at the higher elevations. Winds are expected to remain generally light with a typical diurnal wind pattern. However, some afternoon gusts up to 10 mph will be **possible** along the Klamath River. The hottest and driest day will be Saturday with well above normal temperatures and low humidity values, but winds will remain light. Slightly cooler, but dry conditions expected Sunday.

<u>WEATHER TODAY (THURSDAY):</u> Sunny. Areas of smoke. Inversions lifting by early afternoon, except in areas under thicker smoke.

<u>OUTLOOK FOR SATURDAY AND SUNDAY:</u> High pressure over the area will lead to above normal temperatures along with low afternoon humidity values. Saturday is expected to be the warmest and driest day of the week with slight cooling Sunday. Sunny. Valley winds will remain upslope/upvalley 3-6 mph. Ridges NW 3-7 mph. Highs: Valleys 85-100. WEATHER SUMMARY:

Discussion: High pressure will continue to build over the region bringing above normal temperatures and low afternoon humidity. Expect moderate nighttime humidity recoveries.

Daytime: Max Temp: 88-94° in the valleys; 76-83° on ridges Min RH: 15-20% in the valleys; 17-27% on ridges Nighttime: Min Temp: 46-53° in the valleys; 46-53° on ridges Max RH: 60-70% in the valleys; 40-55% on ridges Winds (20 foot):

FIRE BEHAVIOR

GENERAL

Expect the fire behavior to be low to moderate until mid to late afternoon. Fire spread will be primarily backing and flanking with occasional individual and group tree torching during the early portion of the operational period. Expect the possibility of moderate fire behavior late afternoon into the evening, especially in the northern portion of the fire. After dark expect the fire behavior to diminish considerably.

Energy Release Components are at very high levels for this time of year. September 7 ERC was 72 and is expected to increase over the next several days.

SPECIFIC FIRE BEHAVIOR

Timber fuel types: potential worst-case surface fire spread will be 4-8 chains/hour with flame length 4 to 6 feet. Torching trees and short duration crown runs are possible, with maximum spotting distance to 1/10 of a mile. Backing rate of spread 2-3 chains/hour. Probability of ignition will be 70-80% at the height of the burn period.

Brush areas: potential worst-case surface fire spread will be 15-25 chains/hour with flame length 4 to 6 feet. Occasional short duration crown runs should be expected with maximum spotting distance to 1/10 mile which could increase total spread distance significantly. Probability of ignition 70-80%.

Overnight fire behavior (both Timber and Brush) will become backing, flanking, with occasional torching with spread rates less than 5 chains/hour and flame length to 4 feet. Spotting distance less than 1/10 mile, probability of ignition 20-30%.

AIR OPERATIONS

Air operations may be limited much of the day due to poor visibility caused by smoke, especially on the south side.

09/08 Sunrise: 06:47

Sunset: 19:34

09/09 Sunrise: 06:48

SAFETY

There is still a potential for torching and spotting near containment lines but the probability is low. Keep an eye out for undiscovered spots that may exist near recently burned areas. Take weather observations regularly and relay to Division personnel.

SAFETY MESSAGE

Mop Up is Hazardous Work!

- Injury and accidents are common during the mop up phase.
- Gather situational awareness in your work area and communicate it.
- Reduce risk by identifying and mitigating hazards.
- Stay focused on task, don't let the routine nature of the assignment allow your mind to wander resulting in a loss of situational awareness.
- Take frequent breaks, stay hydrated, and manage fatigue.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN	ROLLING MATERIAL	DRIVING
FATIGUE	DEHYDRATION	HAZARD TREES
SPOT FIRES	BUCKET DROPS	COMPLACENCY

Be sure all elements of your safety plan are in place prior to engagement

Hazard Tree Safety

Inspect area for hazard trees before starting work. Are there trees that have been falling, leaning, hung up, or have broken tops? Are there high risk species? How long has the fire been burning in the area?

Identify hazards and fell or avoid the hazard and flag.

Take down hazard trees only with qualified sawyers and then only if necessary.
