FIRE WEATHER FORECAST

FORECAST NO: 12D
PREDICTION FOR: 24 hours
SHIFT DATE: Sunday, September 11, 2016

INCIDENT NAME: Gap
UNIT: Klamath National Forest
SIGNED:

Incident Meteorologist – Andy Gorelow

TIME AND DATE
FORECAST ISSUED: Sat Sep 10 @ 2000 hours

WEATHER DISCUSSION:

An area of low pressure dropping southeast out of Washington and Idaho will bring cooler temperatures along with slightly higher humidity values to the fire. Temperatures will be about 10 degrees lower today with humidity values up about 5-10%. Northwest winds are also expected at the mid slopes with generally upslope/upvalley winds at the lower elevations. Northwest winds at the ridges will push smoke to the southeast, but speeds will generally be less than 10 mph. As the low drops further south Monday, gusty northeast winds will develop over the fire with gusts up to 20 mph possible at the ridges. No precipitation is expected.

WEATHER TODAY (SUNDAY): Mostly sunny in the morning, partly cloudy in the afternoon. Not as hot. Areas of smoke. Inversions lifting late morning.

MAX TEMPERATURES / MIN RELATIVE HUMIDITY:

Valleys: 85 to 90 degrees / 15 to 23%

Slope/Valley: Light wind through 1000 then northwest to north 4 to 7 mph at the mid and upper slopes with upslope/upvalley in the lower valleys.
Ridges: West to Northwest 5 to 10 with gusts to 15 mph.

HAINES....4 (Low) CWR (>=0.10")....0% LAL....1

WEATHER TONIGHT (SUNDAY NIGHT): Mostly clear. A deeper marine layer may bring higher RH recoveries at the upper elevations. Valley inversions developing after 2200.

MIN TEMPERATURES / MAX RELATIVE HUMIDITY

Valleys: 46 to 53 degrees / 70 to 80%
Ridges: 50 to 60 degrees / 65 to 75%

INPUTS

WEATHER SUMMARY: *** See attached Fire Weather Forecast***

Discussion: Area of low pressure dropping southeast out of Washington and Idaho will bring cooler temperatures with slightly higher humidity to the fire area.

Weather: Mostly sunny in the morning, partly cloudy in the afternoon. Areas of smoke. Inversions lifting early afternoon.

Max Temp: 85-90° in the valleys; 70-78° on ridges

Min RH: 15-23% in the valleys; 16-26% on ridges

Winds (20 foot):

Slope/Valley: Light wind through 1000, then NW 4-7 mph mid and upper slopes. Upslope/upvalley lower valleys.

Ridges: NW 5-10 mph with gusts to 15 mph afternoon.

FIRE BEHAVIOR

GENERAL

There is still a potential for torching and spotting along the Klamath River. Interior islands burning out in Divisions H and M may result in torching or short duration crown runs which may threaten containment lines due to spotting.

Live fuel moistures are near critical levels with Manzanita at 86-94%; Ceanothus at 78-87%; 1000-hr fuels are at 5-6%.

Energy Release Component for the west side of the Klamath NF is currently above the 90th percentile with the September 10 ERC at 81.

SPECIFIC FIRE BEHAVIOR

Expect the fire behavior to be low to moderate until mid to late afternoon. Fire spread will be primarily backing and flanking with occasional torching and short uphill runs during the early portion of the operational period. Expect the possibility of moderate fire behavior late afternoon into the evening.

Timber fuel types: potential worst-case surface fire spread will be 5-10 chains/hour with flame length 4 to 8 feet. Torching trees and short duration crown runs are possible, with maximum spotting distance to 1/10 of a mile. Backing rate of spread 2-3 chains/hour. Probability of ignition will be 70-80% at the height of the burn period.

Brush areas: potential worst-case surface fire spread will be 15-25 chains/hour with flame length 4 to 8 feet. Occasional short duration crown runs should be anticipated if fire gets established with maximum spotting distance to 1/10 mile which could increase total spread distance significantly. Probability of ignition 70-80%.

AIR OPERATIONS

Air operations may be limited much of the day due to poor visibility caused by smoke, especially the east and south areas of the fire.

Sunrise: 06:50

Sunset: 19:29

SAFETY

- Ensure to maintain situational awareness especially in regards to weather and fire behavior.
- Post lookouts to observe fire behavior changes and notify all personnel and adjoining forces when they occur.

HAZARD TREE FELLING – SECURE FELLING AREA

DISCUSSION: The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swamper, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct EVERYONE to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign Lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
