**Weather:** Partly cloudy. Areas of smoke. Inversions lifting by 1200.

Ridges: Northwest to North 6-9 mph.

## FIRE BEHAVIOR

### GENERAL

Seasonal temperatures and relative humidity, along with light winds, will preclude any extreme fire behavior.

Energy Release Components are at very high levels for this time of year. September 1 ERC was 73.

Live fuel moistures are near critical levels with Manzanita and Ceanothus at 86%. 1000-hr fuels are locally at 5%.

### SPECIFIC FIRE BEHAVIOR

Expect the fire behavior to be low to moderate until early afternoon. Fire spread will be primarily backing and flanking with occasional torching and short uphill runs during the early portion of the operational period. Expect the possibility of moderate fire behavior early afternoon into the evening.

Timber fuel types: potential worst-case surface fire spread will be 5-10 chains/hour with flame length 4 to 6 feet. Torching trees and moderate crown runs are possible, with spotting distances up to 2/10 of a mile which can increase spread distances significantly. Probability of ignition will be 60-70% at the height of the burn period.

Brush areas: potential worst-case surface fire spread will be 20-30 chains/hour with flame length 4-8 feet. Occasional crown runs should be expected with spotting to 2/10 mile which could increase total spread distance significantly. Probability of ignition 60-70%.

Areas of concern include Middle Creek Drainage (Div H), Buckhorn Creek Drainage (Div M), and the fire perimeter located above the Klamath River (Div U and Y).

## AIR OPERATIONS

Air operations may be limited much of the day due to poor visibility caused by smoke.

Sunrise: 06:40

Sunset: 19:44

## SAFETY

- Evaluate safety zones and escape routes for anticipated fire behavior; post lookouts to monitor fire behavior and maintain situational awareness.
- Fire Behavior will increase after the inversion lifts. Evaluate fire and weather conditions and continue to reevaluate throughout the shift.

### SAFETY MESSAGE

#### Planning for Safety

- Working in high-risk environments requires effective planning to protect personnel from the hazards they may face.
- You should have tactical, safety and communication plans which work in concert with one another.
- Each plan should include primary, alternate, contingency, and emergency components which are known by all personnel.
- Changing from your primary plan should be a red flag that your safety may become compromised.

#### MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION MARIJUANA GROWS	HEAVY EQUIPMENT DANGER TREES DRY FUEL CONDITIONS
--	--	--

*Be sure all elements of your safety plan are in place prior to engagement*

#### Briefing Protocol

Brief your personnel using the IRPG checklist prior to engagement

Re-brief anytime your plan changes, unexpected changes compromise the plan or your safety, or anytime essential information becomes known and needs to be communicated

Ask questions to be sure essential content is understood

#### Weather Observations

Communicate the fire weather and fire behavior forecast to your personnel

Take local weather observations at your place of work

Communicate the local weather to all of your personnel  
Establish decision points to monitor weather issues that can compromise your safety

# ***TRAINING SPECIALIST MESSAGE***

A Training Specialist assigned to the incident.

All federal, state, and local government agency trainees working on position task books will need to register with the Incident Training Specialist in order to receive proper credit for your assignment.

TNSP availability will be established at Quarry Camp, however, it is to your advantage to complete the (quick) registration process sooner than later.

A Trainee Registration form is attached to the IAP and can be left at the Training Desk.

The TNSP Desk is located at ICP adjacent to the CTSP.
