WEATHER SUMMARY:

*** See attached Fire Weather Forecast***

Discussion: Northwest to north flow aloft will remain over the region through Sunday.

Weather: Sunny with a few clouds in the afternoon. Areas of smoke. Inversions lifting by during the afternoon.

Max Temp: 78-83° in the valleys; 70-75° on ridges **Min RH:** 18-23% in the valleys; 20-25% on ridges

Winds (20 foot):

Slope/Valley: North 3-5 mph through 0900, then upslope/upvalley 3-7 mph through the afternoon.

Ridges: North to northeast 5-10 mph. Gusts up to 15 mph.

FIRE BEHAVIOR

GENERAL

Seasonal temperatures and relative humidity, along with light winds, will reduce chances for extreme fire behavior.

Energy Release Components are at very high levels for this time of year. September 3 ERC was 75.

Live fuel moistures are near critical levels with Manzanita at 86-94%; Ceanothus at 78-87%; 1000-hr fuels are at 5-6%.

SPECIFIC FIRE BEHAVIOR

Expect the fire behavior to be low to moderate until mid to late afternoon. Fire spread will be primarily backing and flanking with occasional torching and short uphill runs during the early portion of the operational period. Expect the possibility of moderate fire behavior late afternoon into the evening.

Timber fuel types: potential worst-case surface fire spread will be 5-10 chains/hour with flame length 4 to 6 feet. Torching trees and short duration crown runs are possible, with spotting distances up to 2/10 of a mile which can increase spread distances significantly. Probability of ignition will be 70-80% at the height of the burn period.

Brush areas: potential worst-case surface fire spread will be 20-30 chains/hour with flame length 4 to 8 feet. Occasional short duration crown runs should be expected with spotting to 2/10 mile which could increase total spread distance significantly. Probability of ignition 70-80%.

Areas of concern include the southern fire perimeter located on the north side of the Klamath River (Div U and Y); Middle Creek Drainage (Div H) and Buckhorn Creek Drainage (Div M) located at the north end of the fire.

AIR OPERATIONS

Air operations may be limited much of the day due to poor visibility caused by smoke, especially on the south side.

Sunrise: 06:42

Sunset: 19:41

SAFETY

Moderate fire behavior will occur after the inversion lifts. Short duration crown runs and spotting should be expected. Set trigger points and evaluate fire and weather conditions and continue to reevaluate throughout the shift.

SAFETY MESSAGE

Safety Zones in the Timber

- Identifying effective safety zones in the timber fuel models can be difficult.
- Natural Safety Zones (large areas void of fuel) are generally the only option under worst-case scenario conditions.
- Previously burned areas often have re-burn potential, and can also be impacted by convective heat, and seldom have space for vehicles.
- Setting conservative decision points, withdrawing from the area placing time and space between you and the fire is often the best option.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN	ROLLING MATERIAL	HEAVY EQUIPMENT
FATIGUE	DEHYDRATION	HAZARD TREES
SPOT FIRES	BUCKET DROPS	POISON OAK

Be sure all elements of your safety plan are in place prior to engagement

Planning for Safety

Have multiple plans and make them know

P – Primary Plan (Offense)

Focused on firefighter safety and mission objectives

A – Alternate Plan (Offense)

A fall back plan that closely supports the primary

C- Contingency Plan (Defense)

Entirely focused on firefighter safety

E – Emergency Plan (Defense)

Entirely focused on individual firefighter survival

Radio Communications

- Use clear and concise language when transmitting
- Pause briefly before speaking when transmitting
- Wait for the repeater to click off before replying to a message
- Acknowledge messages to ensure they were received
- Keep spare batteries readily available
- When channels are busy, keep radio traffic to a minimum
- Always scan the command, tactical, and air to ground channels

Seek assistance from the communications unit is you have questions about radio operation
