3. Objective(s):		
Leader's Intent:		
A full suppression strategy will be implemented for the Gap Fire through a combination of direct and indirect line construction. Efforts will be made to eliminate the spread of the fire onto private property where feasible and to minimize the fire effects across the landscape through the application of a well-planned fire suppression response.		
Management Objectives:		
<ul style="list-style-type: none"> • Ensure that strategies and tactics provide for firefighter and public safety through the application of sound risk management principles. • Ensure that all suppression actions are commensurate with the values at risk. • Minimize undesirable suppression impacts by employing only tactics that have the highest probability of success while minimizing firefighter exposure. • Establish and strengthen cooperator, partner, and stakeholder relationships. 		
4. Operational Period Command Emphasis:		
Keep the fire:		
<ul style="list-style-type: none"> • North of Highway 96. Contain any spot fires and develop contingency lines. • South of the Siskiyou Crest to keep the fire out of another major watershed. • East of Seiad Creek by keeping the fire within existing containment lines. • West of the footprint of the 2014 Beaver Fire to minimize size and reduce the threat to private property.

INPUTS

WEATHER SUMMARY: ***See attached Fire Weather Forecast***

Discussion: Northerly flow aloft will remain over the region through Monday. Good humidity recovery at night.

Weather: Clear. Areas of smoke. Inversions developing by 2200.

Min Temp: 37 - 43° in the valleys; 35-43° on the ridges

Max RH: 85 - 90% in the valleys; 80 - 90% on the ridges

Winds (20 foot):

Slope/Valley: Upslope/upvalley 3 – 6 mph with possible gusts to 10 near the Klamath River until 2000 then downslope/down valley 3 – 6 mph overnight.

Ridges: North 4 – 7 mph with gusts to 10 mph transitioning to a northeast direction after midnight.

FIRE BEHAVIOR

GENERAL

Seasonal temperatures and relative humidity, along with light winds, will reduce chances for extreme fire behavior.

Energy Release Components are at very high levels for this time of year. September 3 ERC was 75.

Live fuel moistures are near critical levels with Manzanita at 86-94%; Ceanothus at 78-87%; 1000-hr fuels are at 5-6%.

SPECIFIC FIRE BEHAVIOR

Expect the fire behavior to be moderate late afternoon into the evening. Fire behavior will diminish late with backing and flanking spread, occasional torching, and short-range spotting.

Timber fuel types: potential worst-case surface fire spread will be 5-10 chains/hour with flame length 4 to 6 feet. Torching trees and short duration crown runs are possible, with spotting distances up to 2/10 of a mile which can increase spread distances significantly. Probability of ignition will be 70-80% at the height of the burn period.

Brush areas: potential worst-case surface fire spread will be 20-30 chains/hour with flame length 4 to 8 feet. Occasional short duration crown runs should be expected with spotting to 2/10 mile which could increase total spread distance significantly. Probability of ignition 70-80%.

Overnight fire behavior (both Timber and Brush) will become backing, flanking, torching, occasional upslope runs with spread rates less than 5 chains/hour and flame length to 4 feet. Spotting distance less than 1/10 mile, probability of ignition 20-30%.

The primary area of concern is the southern fire perimeter located on the north side of the Klamath River (Div U and Y).

AIR OPERATIONS

Air operations may be limited due to poor visibility caused by smoke, especially on the south side of the fire.

Sunset: 19:41

Sunrise: 06:43

SAFETY

Smoky conditions overnight, especially toward early morning, may result in hazardous conditions: spots may not be readily observed until a considerable size due to reduced visibility; vehicle operation can be hazardous during the night; other hazards such as snags may not be readily visible.

SAFETY MESSAGE

Safety Zones in the Timber

- Identifying effective safety zones in the timber fuel models can be difficult.
- Natural Safety Zones (large areas void of fuel) are generally the only option under worst-case scenario conditions.
- Previously burned areas often have re-burn potential, and can also be impacted by convective heat, and seldom have space for vehicles.
- Setting conservative decision points, withdrawing from the area placing time and space between you and the fire is often the best option.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT HAZARD TREES POISON OAK
--	---	---

Be sure all elements of your safety plan are in place prior to engagement

Planning for Safety

Have multiple plans and make them know

P – Primary Plan (Offense)

Focused on firefighter safety and mission objectives

A – Alternate Plan (Offense)

A fall back plan that closely supports the primary

C- Contingency Plan (Defense)

Entirely focused on firefighter safety

E – Emergency Plan (Defense)

Entirely focused on individual firefighter survival

Radio Communications

- Use clear and concise language when transmitting
- Pause briefly before speaking when transmitting
- Wait for the repeater to click off before replying to a message
- Acknowledge messages to ensure they were received
- Keep spare batteries readily available
- When channels are busy, keep radio traffic to a minimum
- Always scan the command, tactical, and air to ground channels

Seek assistance from the communications unit if you have questions about radio operation
