

GAP FIRE

Incident Action Plan

September 13th, 2016
0600 – 1800

MOP-UP & REPAIR

Conduct thorough briefings with your crew, utilize the appropriate PPE for your assignment, maintain proper spacing while working, and be alert for hazard trees, stump holes, ash pits and other hazards that may be present. Evaluate unburned islands and maintain your “situational awareness”.

MEDICAL EMERGENCIES

Base activities on these three questions

1. What are we going to do if someone gets hurt?
2. How will we get them out?
3. Time to get them to a hospital?

If the answers are insufficient, stop, reassess and consider alternate strategies and tactics!

**KEEP A HIGH LEVEL OF
SITUATIONAL AWARENESS**
Gap Fire: CA-KNF-007501 P5KN0B (0505)
Klamath National Forest

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period: DAY	
GAP	Date/Time From: 09/13/2016 0600 TUE	Date/Time To: 09/13/2016 1800 TUE
3. Objective(s):		
<p>MANAGEMENT OBJECTIVES</p> <ol style="list-style-type: none"> 1. Utilize strategies and tactics to provide for firefighter and public safety through hazard recognition and application of the risk management process. 2. Utilize Resource Advisors to identify and evaluate suppression repair work. 3. Maintain and improve cooperator, stakeholder, and community relationships. <p>OPERATIONAL OBJECTIVES</p> <ol style="list-style-type: none"> 1. Keep the fire within existing containment lines and implement approved suppression repair plan. 2. Continue implementing fire suppression repair in accordance with the agency approved plan. 		
4. Operational Period Command Emphasis:		
<ul style="list-style-type: none"> • LEADERS INTENT • Continue existing suppression strategies on the Gap fire. • Focus efforts on resource restoration through suppression repair and minimizing negative fire effects from interior burning. 		
General Situational Awareness:		
<p>5. Site Safety Plan Required? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/></p> <p>Approved Site Safety Plan(s) Located at:</p>		
6. Incident Action Plan (the items checked below are included in this Incident Action Plan):

FIRE WEATHER FORECAST

FORECAST NO: 14D
PREDICTION FOR: 24 hours
SHIFT DATE: Tuesday, September 13, 2016

INCIDENT NAME: Gap
UNIT: Klamath National Forest
SIGNED: *Shad Keene*
(240)-778-5304
Incident Meteorologist – Shad Keene

TIME AND DATE
FORECAST ISSUED: Mon Sep 12 @ 1900

...RED FLAG WARNING FOR GUSTY WINDS AND LOW HUMIDITIES THROUGH 11AM PDT THIS MORNING...
An upper low will move to the east today and ridgetop winds will diminish this afternoon. After that, the fire will be dominated by lighter, terrain-driven winds for the next several days. An upper ridge of high pressure will nudge temperatures higher each day with readings 10 degrees above normal expected by Friday and Saturday. A weak upper trough should lower temperatures and raise humidities on Sunday.

WEATHER TODAY (TUESDAY): Gusty east winds early on mid to upper slopes and ridges. Winds diminish mid-late morning. Warmer conditions than Monday. Mostly sunny with areas of smoke.

MAX TEMPERATURES / MIN RELATIVE HUMIDITY:

Valleys: 82 to 87 degrees / 10 to 16%
Ridges: 66 to 72 degrees / 15 to 20%

20 FOOT WINDS:

Slope/Valley: Early morning downslope/downvalley 5 to 10 mph, strongest in east to west drainages. Afternoon upslope/upvalley 4 to 8 mph with gusts to 12 mph.
Ridges: Morning east 10 to 15 mph with gusts to 25 mph. Afternoon northeast 8 to 12 mph.

HAINES....4 (Low) CWR (>=0.10")....0% LAL....1

WEATHER TONIGHT (TUESDAY NIGHT): Mostly clear with patchy smoke.

MIN TEMPERATURES / MAX RELATIVE HUMIDITY

Valleys: 39 to 45 degrees / 60 to 70%
Ridges: 50 to 55 degrees / 35 to 45%

20 FOOT WINDS:

Slope/Valley: Downslope/downvalley 3 to 5 mph.
Ridges: Northwest 5 to 10 mph.

CWR (>=0.10")....0% LAL....1

WEDNESDAY: Mostly sunny with areas of smoke. Temperatures trending warmer. Upslope/upvalley 4 to 8 mph with gusts to 12 mph most of the fire. Afternoon northwest ridgetop winds 6-12 mph with gusts to 18 mph. Highs 83-90 valleys, 68-74 ridges. Min RH: 10-20%.

OUTLOOK FOR THURSDAY AND FRIDAY:

An upper ridge of high pressure will build over the area, bringing hot and dry conditions. Winds will be terrain driven over most of the fire with north to northeast ridgetop winds 6-12 mph. Highs 80-98. Min RH: 10-20%

Yesterday Nearby RAWS:	Max/Min T	Max/Min RH	Peak Gust / Time
Collins Baldy 5476'	65 / 44	55 / 18	ENE 24 mph @ 0830
Slater Butte 4621'	62 / 46	54 / 23	ENE 24 mph @ 0850
Oak Knoll 1953'	81 / 45	57 / 13	S 19 mph @ 1420

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 26	TYPE OF FIRE: Wildland Fire
FIRE NAME: Gap Fire	OPERATIONAL PERIOD: 0600 – 1800, Sept. 13, 2016
DATE ISSUED: September 12, 2016	TIME ISSUED: 1900
UNIT: Klamath NF	SIGNED: <i>[Signature]</i> FBAN

WEATHER SUMMARY: ***See attached Fire Weather Forecast***

Discussion: RED FLAG WARNING THIS MORNING FOR GUSTY EAST WINDS AND LOW RH

Weather: Gusty east winds early on mid to upper slopes and ridges. Winds diminish mid to late morning. Warmer conditions than Monday. Mostly sunny with areas of smoke.

Max Temp: 82-87° in the valleys; 66-72° on ridges

Min RH: 10-16% in the valleys; 15-20% on ridges

Winds (20 foot):

Slope/Valley: Downvalley 5-10 mph becoming upslope/upvalley 4-8 MPH with gusts to 12 mph

Ridges: Morning east 10-15 mph with gusts 25 mph. Afternoon northeast 8-12 mph.

FIRE BEHAVIOR

GENERAL

Active fire behavior has diminished over the past two shifts; however, given the predicted weather forecast the probability for active fire behavior is still possible in available fuelbeds adjacent to a heat source.

Live fuel moistures are near critical levels with Manzanita at 86-94%; Ceanothus at 78-87%; 1000-hr fuels are at 5-6%.

Energy Release Component for the west side of the Klamath NF is currently above the 90th percentile

SPECIFIC FIRE BEHAVIOR

Fuels across the fire area will continue to burn out. Unburned fuels adjacent to heat sources could be impacted by the predicted east winds this morning.

DIVISION H: Interior islands that are holding residual heat and are in alignment with gusty east ridgetop winds could torch and throw spots to the west up to ¼ mile until around 1100. Probability of ignition in the morning until 1100 will be 20-30%.

DIVISION M: Interior islands that are holding residual heat and are in alignment with gusty northeast ridgetop winds could torch but embers will loft into the burn.

Timber fuel types: potential **worst-case** surface fire spread will be 5-15 chains/hour with flame length 4 to 8 feet. Torching trees and short duration crown runs are possible, with maximum spotting distance to 1/10 of a mile. Backing rate of spread 2-3 chains/hour. Probability of ignition will be 70-80% at the height of the burn period.

Brush areas: potential **worst-case** surface fire spread will be 15-25 chains/hour with flame length 4 to 8 feet. Occasional short duration crown runs should be anticipated if fire is established with maximum spotting distance to 1/10 mile, which could increase total spread distance significantly.

AIR OPERATIONS

Air operations should not effected by smoke today.

SAFETY

Gusty ridgetop winds could cause fire weakened trees to fall

MEDICAL PLAN (ICS 206 WF)

Medical Incident Report

Use items one through nine to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS DECLARE: "MEDICAL EMERGENCY" OR "NON-EMERGENCY MEDICAL TRANSPORT"

Ex: "Communications, Div. Alpha. Stand-by for a medical emergency on Div. Alpha" (If life threatening request designated frequency be cleared for emergency traffic.)

2. INCIDENT STATUS: *Provide incident summary and command structure.*

- **Nature of Injury/Illness** *Describe the injury (Ex: Broken leg with bleeding)* _____
- **Incident Name** *Geographic Name + "Medical" (Ex: Trout Meadow Medical)* _____
- **Incident Commander (Division Sup. or designee)** *Name of IC* _____
- **Patient Care** *Name of Care Provider (Ex: EMT Smith)* _____

3. INITIAL PATIENT ASSESSMENT: *Complete this section for each pt. This is only a brief, initial assessment. Provide additional pt. info after completing this report.*

- **Number of Patients:** _____ - **Male / Female:** _____ - **Age:** _____ - **Weight:** _____
- **Conscious?** YES NO = MEDEVAC! - **Breathing?** YES NO = MEDEVAC!
- **Mechanism of Injury** *What caused the injury?* _____
- **Location, Lat/Long** (Datum WGS84) *Ex: N 40° 42.45' x W 123° 03.24'* _____

4. SEVERITY OF EMERGENCY, TRANSPORT PRIORITY

SEVERITY	TRANSPORT PRIORITY
<input type="checkbox"/> URGENT-RED <i>Life threatening injury or illness.</i> <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i>	Ambulance or MEDEVAC helicopter. Evacuation need is IMMEDIATE.
<input type="checkbox"/> PRIORITY-YELLOW <i>Serious Injury or illness.</i> <i>Ex: Significant trauma, not able to walk, 2° – 3° burns not more than 1-2 palm sizes.</i>	Ambulance or consider air transport if at remote location. Evacuation may be DELAYED.
<input type="checkbox"/> ROUTINE-GREEN <i>Not a life threatening injury or illness. Ex: Sprains, strains, minor heat-related illness.</i>	Non-Emergency. Evacuation considered Route of Convenience.

5. TRANSPORT PLAN:

Air Transport: (Agency Aircraft Preferred)

- Helispot Short-haul/Hoist Life Flight Other

Ground Transport:

- Self-Extract Carry-Out Ambulance Other

6. ADDITIONAL RESOURCE/EQUIPMENT NEEDS:

- Paramedic/EMT(s) SKED/Backboard/C-Collar Crew(s) Burn Supplies Oxygen
- Trauma Bag Medication(s) IV/Fluid(s) Cardiac Monitor/AED
- Other (i.e. splints, rope rescue, wheeled litter)

7. COMMUNICATIONS:

- Run Medical Emergency on Command
- Coordinate with air ambulance on CALCORD tone 6

8. EVACUATION LOCATION:

- **Lat/Long** (Datum WGS84) *EX: N 40 42.45' x W 123 03.24'* _____
- **Patient's ETA to Evacuation Location:** _____
- **Helispot/Extraction Size and Hazards:** _____

9. CONTINGENCY: *If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead...*

REMEMBER:

- Confirm ETA's of resources ordered
- Act according to your level of training
- If air or ground ambulance is **DELAYED:** Package and transport patient to rendezvous with incoming Ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	MEDICAL EMERGENCIES	<ul style="list-style-type: none"> Review and understand Medical Plan in IAP. Base all operational activities on these three questions <ol style="list-style-type: none"> What are we going to do if someone gets hurt? How will we get them out of here? How long will it take to get them to a hospital? <p><i>If the answers are insufficient, stop, reassess and consider alternate strategies and tactics!</i> Review and brief your crews using page 2 in the IRPG.</p>
ALL	RED FLAG WARNING	<ul style="list-style-type: none"> Monitor the weather closely Post lookouts in areas where hazardous condition may occur due to high winds or extreme fire behavior. LOOK UP LOOK DOWN LOOK AROUND for fire weakened trees that may come down unexpectedly due to high winds. This may continue to occur after the wind event. Roads may become blocked and escape routes compromised. Utilize LCES in all your operational decisions. Ensure that you have multiple escape routes, have a contingency plan.
ALL	DANGER TREES	<ul style="list-style-type: none"> Identify, flag and communicate all high-risk DANGER TREES. Keep personnel out of the high-risk areas until the hazards have been mitigated. Establish lookouts when engaged in falling operations. Scout the work area for overhead hazards to ensure safe work areas. Re-assess the need to eliminate the hazard by felling if it is feasible. Keep personnel and the public away. Mitigate using only qualified felling personnel. If unable to mitigate the hazard; flag the area, restrict access and communicate the location to other personnel. Review and brief your crews using pages 22-23 and 79 in the 2014 IRPG.
ALL	DRIVING HAZARDS	<ul style="list-style-type: none"> SEAT BELTS ON...LIGHTS ON...BEFORE wheels turn! Reduce driving speeds to allow for reaction time. Roads within the burned areas have MANY hazards. Scout prior to committing travel through these areas. Mitigate if capable OR close road entirely until hazards have been mitigated. Washboard conditions are common on most of the native surface roads. Maintain adequate following distances. Reduce speed in Developed Areas. Be watchful of local traffic. Drive defensively! Expect the unexpected around every curve. Drive with your headlights on. Look before backing and use backers. On dusty/smoky roads, don't follow too closely behind traffic. Allow time for dust/smoke to clear. Establish one-way traffic or coordinate traffic flow if necessary. Don't drive when fatigued. Adhere to agency driving regulations and guidelines. Pedestrians could be anywhere, Keep speeds down.
ALL	HEAVY EQUIPMENT OPERATIONS DOZER/EXCAVATOR/CHIPPER	<ul style="list-style-type: none"> Maintain safe working distances; stay 100' in front of and 50' behind the operating equipment. If working in the timber increase these distances 2.5 times the canopy height. Make eye contact with operators and ensure all implements have been grounded before approaching equipment. Only operators are allowed on equipment. Avoid working below equipment, especially on steep slopes. Ensure the use of communications with operators; radio or pre-defined hand signals. Refer to and brief your crew using page 80 in the 2014 IRPG for further precautions for working around heavy equipment. When working with "chippers", conduct thorough safety briefings, review and sign approved JHA, only contract personnel should be feeding the chipper.
DIVS A,C,H,M U, Y, Z	MOP-UP	<ul style="list-style-type: none"> Conduct thorough briefing for all personnel (inside the rear cover of IRPG) Use all required PPE, including eye protection Maintain proper spacing and overhead clearance Be alert for danger trees, stump holes, and ash pits Minimize exposure to smoke and rotate personnel into clean air when practical Evaluate unburned islands and increase situational awareness
ALL	HYDRATION & HEAT RELATED ILLNESS	<ul style="list-style-type: none"> Pre-hydrate, Re-hydrate! Dehydration is preventable.....Drink a minimum of 250ml/hour; (¼ of canteen) Drink water & Electrolyte drinks before, during, and after shifts. (2 waters to 1 sports drink). Do NOT mix with water or dilute electrolyte drink. It must be consumed as is for the body to absorb properly. Low volumes of dark, concentrated urine or painful urination indicate a serious need for rehydration, & medical attention. Ensure your crews take an adequate water/electrolyte supply out to assignment and order more as needed. Take frequent snack breaks to keep blood sugar levels up. Pace work to avoid heat injuries Heat exhaustion is characterized by: Weakness, Extreme Fatigue, Nausea, Dizziness &

		<p>Headaches, clammy skin, persistent muscle cramps, decreased urine output.</p> <ul style="list-style-type: none"> • Cool patient as quickly as possible! <ul style="list-style-type: none"> ○ Move patient to a cooler location and provide cold water and sports drink. ○ Actively reduce core temperature through evaporation by fanning patient. ○ Cover head and neck with wet cloth, increase air movement. ○ Heat exhaustion is characterized by: Weakness, Extreme Fatigue, Nausea, Dizziness Headaches, clammy skin, persistent muscle cramps, decreased urine output. ○ Remove Patient from fireline and seek medical attention. • <u>Mental confusion may develop</u> This is a serious trigger point for the potential onset of Heat stroke. • Refer to Medical Plan for additional EMS care and Evacuation. 	
ALL	Logging Operations	<ul style="list-style-type: none"> • Be aware of logging traffic on roads; reduce speeds, communicate to others, identify alternate routes of travel to avoid logging operations. 	
ALL	AIR OPERATIONS	<ul style="list-style-type: none"> • Ensure resources are clear of "Target Area" during bucket or retardant use. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective and mirror flashes. • Consider risk vs gain • Ensure use of trained personnel when involved with longline operations. • Keep non-essential personnel away from dip sites (natural and/or man-made) • Ensure personnel receive a passenger briefing prior to flight.

Bees and Wasps

Firefighter Health & First Aid

In general bees sting to protect their hive and seldom sting when they are out foraging unless they feel threatened (like being swatted at or stepped on). On the other hand, a large number of bees or wasps foraging in one area may indicate a colony is nearby. If you intend to work or camp in the area, scout the area for bee/wasp habitat first.

Colonies vary in behavior over time, especially with changes in season, becoming more aggressive and easily agitated in the late summer and fall. You may pass the same colony for weeks and then one day provoke them unexpectedly.

• Look out for colonies:

Bees and wasps nest in a wide variety of locations, such as pipes, holes, behind shutters, under shingles, cracks and crevices within trees and rocks, and hanging from branches. Be alert for groups of flying bees entering or leaving an opening and listen for buzzing sounds. Be especially alert when climbing, digging fire line and moving logs. **DO NOT** put your hands where you can't see them.

Be particularly careful when using any heavy equipment that produces sound vibrations, such as chainsaws, weed eaters and pumps. **Keep escape routes in mind.**

!!! If you disturb a nest and are being attacked, run away. Use your shroud or shirt to protect your head neck and face. Swatting and waving your arms aggravates bees/wasps more!

• About Africanized and European honey bees:

Honey bees are about 5/8-inch long, brown, hairy insects with black encircling their abdomen, giving them a subtle striped appearance. All honey bees look alike. Only an expert can tell them apart.

The sting from a single Africanized honey bee is no more harmful than one from the common garden or European honey bee. Africanized honey bees are known as "killer bees" because they defend their nests more aggressively, with less provocation, and in larger numbers than the other honey bees, so there is a greater chance of receiving many stings.

Africanized honey bees are found in the southwest and are spreading across the south. You are more likely to be struck by lightning than being killed by Africanized bees.

• Considerations with all bees and wasps:

- 1) If a bee gets in the vehicle while you are driving. Stay calm, pull over and stop, let the bee out.
- 2) Keep trash away from your camp and keep it covered.
- 3) Look at what you are drinking and eating before you eat or drink. Bees and wasps are attracted to accessible food and water.

• If you get Stung:

The first thing you should do is remove the stinger. The end of a sting is barbed and will remain stuck in the skin even if the bee is removed. Muscles in the stinger allow it to continue pumping venom into the victim, even if it is no longer connected to the bee. Do not pull the stinger out with your fingers or tweezers because this will squeeze out more venom. Instead, scrape the stinger out with your fingernail, the edge of a credit card, a dull knife blade, or other straight edged object.

- **Two kinds of reactions are usually associated with bee stings and those of other stinging insects as well: (1) local or (2) systemic, allergic, or life-threatening.**

(1) Local Reactions:

A local reaction is usually characterized by pain, swelling, redness, itching, and a wheal surrounding the wound made by the stinger. Swelling can sometimes be locally severe. For instance, if stung on the finger, the arm may be swollen even up to the elbow. Swelling such as this is fairly common, even though it may be alarming. Swelling may be reduced by cooling the wound and/or taking an antihistamine such as Benadryl. Topical solutions such as calamine may also help alleviate pain.

(2) Systemic, Allergic, or Life-Threatening Reactions:

Allergic reactions can develop anywhere on the body and may include rash or hives, dizziness or headache, cramps, nausea, vomiting, swelling **not** in the general area of the sting, shortness of breath or difficulty swallowing, shock and unconsciousness. If you experience any of these symptoms, seek emergency medical assistance immediately. Symptoms can begin immediately following the sting or up to 30 minutes later and might last for hours.

- **If you know you are allergic:**

Anaphylaxis, if treated in time, usually can be reversed by epinephrine (adrenaline) injected into the body. Individuals who are aware that they are allergic to stings should carry epinephrine in either a normal syringe (sting kit) or an auto-injector (Epi-Pen) at all times when working outside **and communicate their allergy to supervisor/coworkers in case they become incapacitated**. Epinephrine is obtainable only by prescription from a physician.

- **Discussion Topics:**

- **Have you and your crew identified who is allergic to bee/wasp stings? Are they carrying their prescription Epi? Identify the Epi and its location to the rest of the crew.**
- **If you have an EMT on your crew/team, what are their protocols for treating stings and related allergic reactions?**
- **Discuss how you and your crew will safely flag or mark any identified nests/hives.**

The 5-D System for Effective Waterbars

When locating and building waterbars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart (feet)
1-5	200
6-20	125
21-40	60
41-60	40
>60	25

Waterbars should be at least 2 pulaski widths wide and 12-24 inches high.
