General Control Objectives for the Incident (include alternatives)

LEADERS INTENT:

The highest priority will be focused on minimizing risk to firefighters and the public, by continually using the risk management process. It is the expectation that every person assigned in any type of leadership role does a risk assessment and provides the appropriate mitigation measures prior to engaging in any activity.

INCIDENT OBJECTIVES:

- Adopt decisions and actions that thoughtfully consider firefighter and public safety especially with respect to communications, driving, aviation and mop-up.
- Maintain full integration under unified command ensuring stakeholder concerns are addressed for the complex.
- Coordinate closely with local resources to protect residences and timberlands from potential threat.
- Minimize suppression impacts to the wilderness characteristics of the Klamath National Forest through the use of natural barriers, trails, and existing fire scars.
- Utilize resources to maximize efficiency and minimize cost expenditures.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fires main influence is heavy dead and down and steep topography. The fire is burning in areas that haven't seen fire in 60 years. Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, white thorn and Manzanita. Brush LFMC at 120%. and Conifer 160%..Many large rock scree areas exist. The fire has been dependent upon slope and wind alignment. Group torching to short duration crown transition has developed with headfire. Spotting distance up to 1/3-1/2 mile with crown fire spotting out to 3 miles, rollout potential exists. Surface fire spread 6-12 ch/hr with headfire and around 1-3 ch/hr backing and flanking....Flame lengths 3ft Ros with crown involvement has been in excess of 40 ch/hr.....

FDFMC = 5-7% ..1000 hr fuels are at 7%..... PBI=90%

SPECIFIC:

Wallow Fire: Fire will continue to spread and threaten PCT. Surface fire to crown transition is likely today in many areas. Identify wind and slope alignment for aggressive fire spread with Eastern wind exposure.

BRANCH 1: Backing and flanking with rollout challenges give the fire the potential to promote head fire runs in Patterson drainage and Babs Fork Drainage progression to the West.

Spotting could impact fire spread toward H6. Surface fire transitioning to the crown has a high probability.

BRANCH 3: Fires at the top of Yellow Dog peak with spotting and rollout will enhance this fire movement potential today to 40N47 Rd. extending to Marble Mine..Fire progression thru Adkins Creek to Marble Mountains. Continued movement Thru Etna Mill creek toward Snoozers Sling. Surface fire transitioning to the crown has a high probability

Island Fire: Fire progression continuing to the due Alignment and Easterly wind exposure. Surface fire transitioning to the crown has a high probability

AIR OPERATIONS:

Smokey conditions throughout the morning and most of the day could limit aircraft use.

SAFETY

- High heat and low relative humidity...Fuels will be receptive to spread fire in vertical arrangement.
- Significant head fire potential today with surface fire transitioning into the crown.
- STOP = Stop Think Observe Predict
- Unstable atmosphere can lead to creating plume dominated fire behavior that can become aggressive.
- Know how much time it will take you to get to a safety zone.

FIRE DANGER -- West Side KNF

Maximum, Average, and 41th Percentile, based on 15 years data

Fire Danger Area:

- ♦ FDRAs: 200, 202, 204, 208
- ♦ NWS Zones: CA280 & CA281
- ♦ RAWS used: see below
- ♦ Meets NWCG Wx Station Standards

Fire Danger Interpretation:

- EXTREME -- Use extreme caution
- (Caution) -- Watch for change
- Moderate -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2000 - 2014

Average -- shows peak fire season over 15 years (2756 observations)
41th Percentile -- Only 41% of the 2756 days from 2000 - 2014 had an Energy Release Component below 55

Local Thresholds - Watch out:

- Combinations of any of these factors can greatly increase fire behavior:
- 20' Wind Speed over 4 mph, RH less than 22%.
- Temperature over 79, 1000-Hour Fuel Moisture less than 12

Years to Remember: 2013 2014

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

Large fires (>24sq) occur more frequently when ERC exceeds 55 and can readily increase in complexity
Multiple lightning ignitions can overwhelm suppression resources, as occurred in 2008.
Large fires were primarily human ignitions in 2013, and lightning ignitions in 2014.

Sawyers Bar, Somes Bar, Slater Butte, Blue Ridge, Oak Knoll, Slater Butte, Collins Baldy, Quartz Hill, Callahan #2 (2003-Present), and Dutch-Indy (2010-Present) RAWS data was used.

Hazards & Risks

Team Transition & Situational Awareness: Transition is upon us. Maintain a heightened situational awareness. Ensure you know who your new Team supervisors are. **If an assignment is not clear, ask for clarification.**

Existing hazards on the divisions: Steep terrain, roll out, ash pits, poor footing, heavy equipment, and **Extreme Fire Behavior** can continue to be a big concern. If a hazardous condition is identified, notify your Division and follow proper mitigation procedures.

Driving: The camp is becoming very crowded and with that comes a lot of traffic in the ICP area as well as around town. When driving in camp and around town, yield the right of way to residents, watch for pedestrian traffic, and follow the designated traffic plan.

Drive the posted speed limits!
