OUTPUTS FIRE BEHAVIOR

GENERAL:
The fires main influence is heavy dead and down and steep topography. The fire is burning in areas that haven't seen fire in 60 years. Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, white thorn and Manzanita. Brush LFMC at 120%. Conifer 160%. Many large rock scree areas exist. The fire has been dependent upon slope and wind alignment. Group torching to short duration crown transition has developed with headfire. Spotting distance up to 1/4-1/2 mile with crown fire spotting out to 1 mile, rollout potential exists. Surface fire spread 6-12 ch/hr with headfire and around 1-3 ch/hr backing and flanking
....Flame lengths 4ftFDFMC = 3-5% ..1000 hr fuels are at 7%..... PBI=70%

SPECIFIC:
Wallow Fire: Fire will continue to spread and threaten PCT and Etna Summit. Fire will continue to spread Southwest down Crapo and Morehouse drainages toward Forks of Salmon, Quail Flats and Sawyer Bar Road throughout the day. Surface fire to crown transition is likely in many areas. Identify wind and slope alignment for aggressive fire spread with wind or slope exposure.
BRANCH 1: Surface fire spread transition to the crown has high potential. Rollout could still challenge control lines.
BRANCH 2: Surface fire spread transition to the crown has high potential. Rollout could still challenge control lines.
BRANCH 3: Fire progression to snoozers Ridge and Mule Bridge and Tanner Peak. Rollout could still challenge existing control lines.
BRANCH 5: Fire will continue to spread towards Forks of Salmon, Quail Flat, Sawyers Bar Road and the North Fork of the Salmon River. Creeping and Backing down slope/canyon expected. Rollout can enhance this fire movement potential when aligned with wind or slope.
Garden / Grizzly / Mary Fire / Rush Fire: None to Minimal fire growth is anticipated.

AIR OPERATIONS:
Smokey conditions throughout the morning and most of the day could limit aircraft use. Chance of isolated thunderstorms in the afternoon.

SAFETY

- Fuels will be receptive to spread fire due to low time lag fuels moistures.
- Chance of isolated thunderstorms in the afternoon.
- STOP = Stop Think Observe Predict.
- Keep situational awareness up for an increase in fire activity when aligned with wind or slope.

7. Special Instructions:					
* Protect rust resistant Sugar Pine Tree's in section 15 on Yellow Jacket Ridge.					
* Water drafting: utilize fish screens and avoid drafting from cold water tributary confluences from Salmon River. Utilize overhead fill stations when possible.					
* Consult a READ or ARCH prior to any ground or vegetation disturbance in order to mitigate resource damage and noxious weed transportation. Numerous cultural resources exist in this area, including vegetation associated with historic sites.					
* GPS all pump locations and provide coordinates to the Situation Unit and READ's.					
* All leaders and supervisors monitor A/G Command.					
* All dozers consult with READS before constructing lines and utilize ridges when constructing direct and indirect lines.					
* Prepare for spike camp at Forks of Salmon.					
* Avoid ground disturbance, including tree falling, in areas marked with white and orange stripped flagging.

Health & Safety Message

Incident: Salmon August Complex CA-KNF-006081	Date/Op Period: Day/Night Shift Tuesday, 9/5-6/17
---	---

Hazards & Risks

Communication Responsibilities: All firefighters have five communication responsibilities:

1. Brief others as needed.
2. Debrief your actions.
3. Communicate hazards to others.
4. Acknowledge messages.
5. Ask if you don't know.

Leader's Intent: All leaders of firefighters have the responsibility to provide complete briefings and ensure that their subordinates have a clear understanding of their intent for the assignments:

- Task = What is to be done
- Purpose = Why is it to be done
- End State = How it should look when done.

Effective communications between all personnel on the fire is a key element of fire line safety and addressed in the 10 Standard Fire Orders and the 18 Watch Out Situations. Learn and embrace them.

Fuel Geysers Part 2: Discuss in Briefings these geyser mitigation measures:

- Assume all gas powered equipment and fuel transport containers are pressurized. Treat them accordingly when opening, especially near any potential ignition source. Always wear PPE.
- When refueling, move at least 20 feet away from any ignition source.
- Let the saw cool five minutes.
- Turn the saw so the fuel cap is pointed away from you, cover it with a cloth and slowly open the cap to vent away from you.
- If any fuel gets on your clothing, do not go back to sawing without getting fuel free clothes/PPE on. Tell your supervisor.
- Be careful to reseal and close the fuel cap so its closes completely and the threads do not get crossed.
