OUTPUTS FIRE BEHAVIOR

GENERAL:

The fires main influence is heavy dead and down and steep topography. The fire is burning in pockets of fuel that haven't seen fire in 60 years. Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, white thorn and Manzanita. Brush LFMFC at 120%. Conifer 160%. Many large rock scree areas exist. The fire has been dependent upon slope and wind alignment. Group torching to short duration crown transition has developed with headfire. Spotting distance up to 1/4-1/2 mile with crown fire spotting out to 1 mile. Rollout potential exists. Surface fire spread 6-12 ch/hr with headfire and around 1-3 ch/hr backing and flanking.

Flame lengths 1-3ft, FDFMC=15-18% in the AM 10-15% by late afternoon, 1000 hr fuels are at 7-9%

SPECIFIC:

Wallow Fire: Fire spread potential will increase throughout the day. Potential to threaten control lines in the afternoon due to drying. Fire will continue to spread Northeast down Patterson Creek drainage and Southwest down Crapo and Morehouse drainages toward Forks of Salmon and Sawyer Bar Road. Surface fire to crown transition is possible in areas exposed to the wind. Identify wind and slope alignment for increased fire spread.

BRANCH 1: Surface fire spread. Rollout could still challenge control lines.

BRANCH 2: Northwest winds could cause the fire to challenge existing control lines as fuels dry out throughout the day. Surface fire spread transition to crown potential when aligned with wind/slope. Rollout could still challenge existing control lines.

BRANCH 3: Fire could challenge control lines at Snoozers Ridge and Etna Mill Creek as fuel dry out throughout the day. Rollout could still challenge existing control lines.

BRANCH 5: Fire will continue spread toward Tanner Peak, Little North Fork, Forks of Salmon, Sawyers Bar Road. Creeping and Backing down slope/canyon expected. Rollout can enhance this fire movement potential when aligned with wind or slope.

Deep Fire (DIV AA): North/Northwest winds will put fire in alignment with canyon/slope. Surface fire spread transition to crown possible as sun exposure dries fuels throughout the day.

Garden / Grizzly / Mary / Rush / Clair / Fourth: None to Minimal fire growth is anticipated.

AIR OPERATIONS:

Smokey conditions today could limit aircraft use throughout the operational period.

SAFETY

- Fuels will remain receptive to fire spread due to low 100 hour and 1000 hour time lag fuels moistures.
- 1 and 10 hour fuels will dry throughout the day as exposed to sun and wind.
- Keep situational awareness up for an increase in fire activity as fine dead fuel moistures drop.
- STOP = Stop Think Observe Predict.

Hazards & Risks

Weather Watches & Warnings: Definitions: a **weather watch** is issued when the risk of a hazardous weather or hydrologic (rain, hail, snow, flash flooding, etc.) event has increased significantly, but its occurrence, location or timing is still uncertain.

A **weather warning** is issued when a hazardous weather or hydrologic event is occurring, is imminent, or has a very high probability of occurring. A warning is used for conditions posing a threat to life or property.

Heed these watches & warnings and develop a contingency plan to seek shelter or evacuate the area in the event they occur.

Firefighter Health: With the smoky conditions in the fire area, there is an elevated risk of CO (carbon monoxide) exposure.

Signs & Symptoms might include: flu-like symptoms, shortness of breath, mental confusion, headache, dizziness, dimming of vision. Advanced stages can include unconsciousness, convulsions, and respiratory failure. Monitor your personnel and make attempts to rotate folks out of the smoke. If the above signs & symptoms persist, seek medical attention. Usually clear air or supplemental oxygen will lead to a quick recovery.

Heavy Equipment Operations: Working around heavy equipment such as dozers, graders, feller-bunchers, etc. presents unique hazards to firefighters. Refer to your IRPG, pg.80 for specific mitigation measures. A priority: Give them plenty of working room and remain a safe distance away. 100 ft. (+) in general and 2 ½ times the canopy height in timber country.

Watchout Situation of the Day: #3: Safety zones and escape routes not indentified.

RESOURCE ADVISOR MESSAGE

PLEASE WATCH OUT FOR:

Invasive plants: Species in the area include yellow star thistle, marlahand mustard (dyers woad), spotted knapweed and Scotch Broom. Weedy plants introduced from other countries and continents can take over and change our native ecosystems (think blackberry on the west coast, cheat grass on the east side). Invasive plants will be flagged with orange flagging with "INVASIVE SPECIES" written in black. If you're working around these species, please clean off your clothing and equipment afterward.

BASE CAMP RECYCLING REMINDER

Remember that the barrels labeled for recycling are for plastic bottles only (drinking water or sport drink bottles). Please do not place your trash in those barrels, as it creates much more time and expense for our local partners trying to help us conserve a portion of our waste stream. Thanks in advance for your support!

HUMAN WASTE MANAGEMENT ON BACKCOUNTRY DIVISIONS

DO's

On the line – Find an area at least 50' away from trails and 200' from streams and lakes and dig a hole, known as a cat hole, about 6" deep. Do your business and bury the evidence.

Spike camps – Utilize latrines to manage human waste. Dig a trench 18"-24" deep, about a shovel blade wide, and as long as you think you will need. Start at one end and "work" your way to the other. Use minimal dirt to cover your poo so that it lasts as long as possible. You can't make a latrine bigger after it's used, so plan ahead!

Recommendations for latrines - Keep a "bathroom key" in plain view, so that others know when it is occupied. Use a piece of pink flagging tied across the access and put it up when you go in. Flag your route to the latrine so you don't spend time looking when you need to go. Keep a couple rolls of TP and hand sanitizer near the latrine. A small tin can or similar is nice to have to scoop a little dirt when you're done. Keep any rocks you excavate during construction and place them on top when you finally backfill your latrine when it is full or your camp or crew moves on. If you are really fancy, take some logs and set up a sitting log or two for comfort.

DON'T's!!!

Don't go number 2 on the surface of the ground. Seriously. It is unsanitary and unprofessional.

Don't use cat holes around spike camps or other areas that will be impacted for a long time or by a lot of people. You will run out of room at some point, and you won't have a system for letting others know when you have to go.

Don't bury trash or anything other than TP along with your waste.

Keep it professional and keep our wilderness clean.

Thank you!

Human Resource Message

**Some talk to you
in their free
time and some
free their time
to talk to you.**

The 3 second rule happens to be one of the most powerful communication tools. The rule requires if you see someone you're interested in talking to, you have 3 seconds to walk up to them and start a conversation. The reason why it's so effective is because **if you wait any longer than 3 seconds, you'll probably end up over-thinking it and never say anything at all.** With only 3 seconds, you don't have enough time to let anxiety get the best of you. If you see someone you want to talk to, you must immediately go over and talk to them. Stop worrying about what to say. **Anything is better than nothing.** It's very simple, but extremely effective!
