Max temperature.....75° - 80° valleys, 58° - 65° ridges.

Min humidity.....20-30 % valleys, 25-35% upper ridges.

20-foot winds.....

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

The fires main influence is heavy dead and down and steep topography. The fire has burned in pockets of fuel that haven't seen fire in 60 years but is moving into more recent burn scars. Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, white thorn and Manzanita. Brush LPMC at 120%. Conifer 160%. Many large rock scree areas exist. The fire has been dependent upon slope and wind alignment. Group torching to short duration crown transition has developed with headfire. Spotting distance up to 1/4-1/2 mile with crown fire spotting out to 1 mile. Rollout potential exists. Surface fire spread 6-12 ch/hr with headfire and around 1-3 ch/hr backing and flanking.

Flame lengths 1-3ft, FDFMC=15-20% in the AM, 3-6% by late afternoon, 1000 hr fuels are at 7-9%

#### SPECIFIC:

**Wallow Fire:** Limited fire spread potential throughout the day. Limited Fire spread down Patterson Creek drainage. Continued fire spread potential Southwest down Crapo and Morehouse drainages toward Forks of Salmon and Sawyer Bar Road. Surface fire to crown transition is possible in areas exposed to the wind. Identify wind and slope alignment for increased fire spread.

**BRANCH 1:** Surface fire spread. Rollout could still challenge control lines.

**BRANCH 2:** Gusty winds could cause the fire to challenge existing control lines as fuels dry out throughout the day. Rollout could still challenge existing control lines.

**BRANCH 3:** Gusty winds could challenge control lines at Snoozers Ridge and Etna Mill Creek. Fuels will dry out throughout the day to support fire activity within control lines. Rollout could still challenge existing control lines.

**BRANCH 5:** Fire could continue spread toward Tanner Peak, Little North Fork, Forks of Salmon, Sawyers Bar Road. Creeping and Backing down slope/canyon expected. Rollout can enhance this fire movement potential when aligned with wind or slope.

**Deep Fire (DIV AA):** Gusty winds could challenge control lines. Surface fire spread transition to crown possible as sun exposure dries fuels throughout the day. Rollout can enhance this fire movement potential when aligned with wind or slope.

**Garden / Grizzly / Mary / Rush / Clair / Fourth:** None to Minimal fire growth is anticipated.

#### AIR OPERATIONS:

Clear skies with areas of smoke. Visual Flight Rules (VFR) conditions will need to be evaluated throughout the day.

## SAFETY

- Fuels will remain receptive to fire spread due to low 100 hour and 1000 hour time lag fuel moistures.
- Continued potential for rollout from heavy fuels.
- STOP = Stop Think Observe Predict.

## FIRE FIGHTER FATIGUE

- Fatigue management goes beyond counting hours on timesheets, it is individualized and overt.
- Cumulative fatigue is dangerous. It prevents sound decision-making, confounds situational awareness, and dulls reaction times. It is as problematic in the office as it is on the fireline.
- Cumulative fatigue is manifested in the explanations used when folks are asked to take a break, or take a day off..."I don't have time." "There is too much going on." "As soon as things calm down a bit."
- Fire fighters MUST assure their situational awareness is intact and that risks are assessed and mitigated before committing to an action.
- Our values are simple...firefighter and public safety are the number one concern to be addressed within the priorities of suppression. Please take the time to watch out for each other

## INCIDENT SAFETY ANALYSIS 215a

Salmon August Complex - Thursday, September 14, 2017

8. Location	9. Hazard	6. Control or Abatement Action (Engineering, Administrative, PPE, Avoidance, Education, etc)
ALL	Extreme Fire Behavior	Share weather observations with all personnel assigned to division. Establish "Trigger Points" to withdraw. Use "Risk Management" process prior to engaging in suppression actions found in the IRPG.
ALL	Hazard Trees	Follow "Hazard Tree Safety" guidelines in the IRPG. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights.
ALL	Air Operations	Follow "Aviation Watch-Out Situations" found in the IRPG. Don't plan on air resources for medical transport or resupply. Refer to IRPG for directing bucket drops. Ensure positive communication with all air resources.
AA	Spike Camp/Coyote	Keep a clean camp. Ensure communications are in place. Review and observe "Line Spike" considerations found in the IRPG.
ALL	Indirect Fireline	Post lookouts, identify escape routes and safety zones. Review "Strategy/Indirect Attack" found in the IRPG.
ALL	Steep Terrain & Rolling Debris	Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access. Post lookouts maintain LCES.
ALL	Spot Fires	Size up prior to engagement. Watch for multiple spot fires. Ensure LCES is in place. Maintain situational awareness at all times.
ALL	Communications	Maintain communication with aviation resources, and suppression organization. Ensure all know frequency and protocol for contacting resources. Utilize the ICS 205. Utilize human repeaters when working in dead spots.
ALL	Heavy Equipment Operations	Establish communications with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment and increase it to 1 1/2 times tree height when in timber. Use a spotter when backing. Avoid working below heavy equipment.
ALL	Fatigue & Over Exertion	Drink 1 quart of water each hour during and after work. Rotate crews out of smoky areas. Set a reasonable work pace and allow adequate rest breaks while on the project. Stagger work crews start time to limit fatigue. Use buddy system to monitor personnel of heat related and fatigue issues. Follow work / rest guidelines.

## INCIDENT SAFETY ANALYSIS 215a

ALL	Heat Related Illness (HRI)& Dehydration	<p>Drink fluids throughout operational period (6-8 qts/shift).            Maintain water/electrolyte ratio of 3 to 1.            Carry extra water on line and cache water at drop points.            Take frequent breaks, minimum of 10 minutes every hour.            Allow out of area resources time to acclimatize before expecting peak performance.            Recognize symptoms of HEAT RELATED ILLNESS which include:</p> <ul style="list-style-type: none"> <li>o Lack of energy</li> <li>o Headaches, dizziness</li> <li>o Lack of rest</li> <li>o No hunger, poor eating habits</li> <li>o Hot skin, and lack of sweating</li> </ul>
ALL	Environmental Hazards	<p>Be alert for rattlesnakes, watch footing and hand placement around rocks.            Check yourself for ticks. Watch for biting and stinging insects.            Be alert for bears, cougars and other wildlife.            Be aware of poison oak, seek treatment at the medical trailer if exposed.</p>
ALL	Firing Operations & Devices	<p>A written guideline shall be prepared and approved for major burning operations.            Conduct thorough briefing for all personnel.            Qualified personnel for all firing operation assignments.            Utilize Risk Mgmt. Process.            Establish LCES prior to implementing burning operations.            Assign an over-all Firing Boss to coordinate ignitions when simultaneous burning operations are planned for multiple locations.</p>
A,D	Pack Train Operations	<p>Do's, when pack mules are approaching you, move the crews preferably to the downhill side of the road.            Do's, take all tools to the same side of the road as the crews.            Don't, sneak up from behind a mule, make it known you are approaching the pack mule line.            Don't move up to quickly to the mules, mules startle easily.            Don't confront, feed or approach mules without permission from one of the mule team members.</p>
All	Chipper Operations	<p>Ensure JHA is provided and signed by operators.            Only qualified personnel will feed the chipper.            Ensure appropriate PPE is used including eye and hearing protection.</p>
All	UTV Operations	<p>Assure an ATV/UTV is the best tool for the job.            Use only Agency approved and inspected vehicle.            All personnel are in required PPE. Use restraints provided.            Check for brush debris buildup inside/outside ATV and remove if present.            Use proper tie downs (4 per load) and discuss load management to not overload vehicles.            Be sure fire extinguishers and first aid kit present. Have a way to fix a flat.</p>
All	Driving	<p>Drive slowly, watch for livestock and wildlife.            Utilize slow speeds when experiencing poor visibility due to smoky conditions.            Slow down when driving through local communities.            Watch for deteriorating road conditions.</p>
A,D,H, K,M	Mop-up & Repair	<p>Do not work above or below personnel during rehab/mop-up operations.            Alert crew personnel of rolling debris by yelling to affected individuals.            Position debris that could roll vertically on slope.            Wear eye protection.</p>
