## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER</b> 30	<b>TYPE OF INCIDENT:</b> Wildland Fire
<b>INCIDENT NAME:</b> Salmon August Complex	<b>OPERATIONAL PERIOD</b> Day shift 9/18/17
<b>DATE ISSUED:</b> 17 September 2017	<b>TIME ISSUED:</b> 2200
<b>UNIT:</b> Klamath National Forest	<b>SIGNED</b>  Ken Loda, FBAN

### INPUTS

**WEATHER SUMMARY** See the weather forecast preceding.

### FUELS CONDITIONS

Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, white thorn and manzanita. Brush live moisture is at 100%, conifers 150%. Fine dead fuel moisture is 15-20% at 0700, going to 4-7% by afternoon, 1000-hr fuels are at 7-9%.

### OUTPUTS

#### GENERAL FIRE BEHAVIOR

Very good RH recovery inhibited overnight burning. The fire's main factors are heavy dead and down fuels with steep topography. The recent fire activity has been most dependent upon slope and wind alignment.

Surface fire spread 5-11 ch/hr with headfire, up to 15 in gusts, and 1-2 ch/hr backing and flanking. Flame lengths 3-6 ft.

Spotting: Single-tree or group torching is possible in the right fuel settings. Spotting distance up to ¼-mile with group torching. Rollout potential exists in many areas. The probability of ignition will be 10% at the start of shift, going to 50% during peak burning conditions in shaded fuels and north aspects, 70% in other environments.

**Local Critical Thresholds:** We meet only one local critical thresholds: 1000-hour fuels under 12%.

#### SPECIFIC FIRE BEHAVIOR

**Deep Fire (DIV AA):** Fortunately this site is largely protected from most of the general winds. Interior burnout with surface fire is most likely. However, this fire setting is prime for rollout.

**Wallow Fire:** Overall limited fire spread potential throughout the day. Interior burnout will continue. All divisions have perimeter areas with steep slopes that can promote rollout. Surface fire with transition to torching is possible in areas exposed to the wind. Predicted winds will push activity on most of our uncontained perimeters back into the black.

**Division A:** We may see some fill-in on the south aspects, northeast of English Peak to the headwaters of Wooley Creek and the Pacific Crest Trail. That could be enhanced by our afternoon winds.

**Divisions K, M, P:** Afternoon winds could push burning conditions to the high end of the forecast on the ridges and upper slopes. Winds, and therefore direction of spread, are likely to be erratic particularly around Whiskey Butte.

### SAFETY

**SAFETY** Identify wind and slope alignment for increased fire spread. Watch for rollout, snags, and falling fire-loosened rocks.

**AIR OPERATIONS** General gusts and erratic ridge-top winds could complicate operations this afternoon.
