## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER</b> 31	<b>TYPE OF INCIDENT:</b> Wildland Fire
<b>INCIDENT NAME:</b> Salmon August Complex	<b>OPERATIONAL PERIOD</b> Day shift 9/19/17
<b>DATE ISSUED:</b> 18 September 2017	<b>TIME ISSUED:</b> 2200
<b>UNIT:</b> Klamath National Forest	<b>SIGNED</b>  Ken Loda, FBAN

### INPUTS

**WEATHER SUMMARY** See the weather forecast preceding.

### FUELS CONDITIONS

Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, whitethorn and manzanita. Brush live moisture is at 100%, conifers 150%. Fine dead fuel moisture is 20% or higher at 0700, going to 11% by afternoon; 1000-hr fuels are at 9-11%.

### OUTPUTS

#### GENERAL FIRE BEHAVIOR

Very good RH recovery continued to inhibit overnight burning. The fire's main factors are heavy dead and down fuels that are still very dry, with steep topography.

During the peak of the burning period (1400 to 1800) we could see surface fire spread of 2 ch/hr at a head, and less than 1 ch/hr backing and flanking. Flame lengths about 1 foot.

Spotting: Rollout potential exists in many areas. Potential spotting success is low, as the probability of ignition will be 0% at the start of shift, going to 20% during peak burning conditions.

**Local Critical Thresholds:** We meet only one local critical thresholds: 1000-hour fuels under 12%.

#### SPECIFIC FIRE BEHAVIOR

**Deep Fire (DIV AA):** Interior burnout with smoldering or creeping surface fire is most likely. Just stay alert as this fire setting is prime for rollout.

**Wallow Fire:** Overall no fire spread potential throughout the day. Interior burnout of heavier fuels (1000- and 10,000-hours) will continue. All divisions have perimeter areas with steep slopes that can promote rollout.

### SAFETY

**SAFETY** Watch for rollout, snags, and falling fire-loosened rocks.

**AIR OPERATIONS** General gusts and erratic ridge-top winds could complicate operations this afternoon.
