FIRE BEHAVIOR FORECAST

FORECAST NUMBER 32	TYPE OF INCIDENT: Wildland Fire
INCIDENT NAME: Salmon August Complex	OPERATIONAL PERIOD Day shift 9/20/17
DATE ISSUED: 19 September 2017	TIME ISSUED: 2200
UNIT: Klamath National Forest	SIGNED  Ken Loda, FBAN

INPUTS

WEATHER SUMMARY See the weather forecast preceding.

FUELS CONDITIONS

Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, whitethorn and manzanita, or areas of dead and down, and approximately 10-year old conifer and brush reproduction after previous fires. Brush live moisture is at 100%, conifers 150%. Fine dead fuel moisture is 25% or higher at 0700, and could get to 11% by mid-afternoon; 1000-hr fuels are at 14-16%.

OUTPUTS**GENERAL FIRE BEHAVIOR**

Excellent RH recovery continues to inhibit overnight burning. The fire's main factors are heavy dead and down fuels that are still dry, with steep topography.

The forecast weather is unlikely to support any fire behavior other than continued burnout of heavy fuels.

Spotting: Rollout potential exists in many areas. Spotting success is low, as the probability of ignition will be 0% at the start of shift and will go only to 10% during peak burning conditions.

SPECIFIC FIRE BEHAVIOR

Overall no fire spread potential throughout the day. Interior burnout of heavier fuels (1000- and 10,000-hours) will continue. All divisions have perimeter areas with steep slopes that can promote rollout.

SAFETY

SAFETY Watch for rollout, snags, and falling fire-loosened rocks. Erratic wind direction and very high gusts during the frontal passage, combined with a new wind direction (NW) for us, could destabilize snags that had been secure under a SW wind.

AIR OPERATIONS Low ceiling, general gusts, and erratic ridge-top winds could complicate or prevent operations most of the day.
