<b>1. Incident Name:</b>		<b>2. Operational Period:</b> DAY	
SALMON AUGUST COMPLEX		Date/Time From: 09/22/2017 0700 FRI	Date/Time To: 09/22/2017 2000 FRI
<b>3. Objective(s):</b>			
<b>LEADERS INTENT:</b>			
The highest priority is to minimize risk to firefighters and the public by continually using the risk management process. It is expected that every person assigned in a leadership role does a risk assessment and provides appropriate mitigation measures prior to engaging in any activity.			
<b>INCIDENT OBJECTIVES:</b>			
<ul style="list-style-type: none"> <li>• Firefighter and public safety take precedence over all other incident objectives.</li> <li>• Adopt decisions and actions that thoughtfully consider firefighter exposure especially with respect to communications, driving, aviation, and mop-up.</li> <li>• Coordinate closely with local cooperators to protect private property, resources and infrastructure within and adjacent to the planning area.</li> <li>• Maintain and strengthen relationships with partner agencies, organizations, tribes, and the community.</li> <li>• Minimize suppression related impacts to wilderness characteristics through use of natural barriers, trails, and existing fire scars.</li> <li>• Implement suppression repair actions to the standards identified in the Salmon August Repair Plan (September 18, 2017).</li> </ul>			
<b>4. Operational Period Command Emphasis:</b>			
Deep Fire is operational priority number 1, implemetation of suppression repair on the Wallow Fire is priority number 2.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER</b> 34	<b>TYPE OF INCIDENT:</b> Wildland Fire
<b>INCIDENT NAME:</b> Salmon August Complex	<b>OPERATIONAL PERIOD</b> Day shift 9/22/17
<b>DATE ISSUED:</b> 21 September 2017	<b>TIME ISSUED:</b> 2200
<b>UNIT:</b> Klamath National Forest	<b>SIGNED</b>  Ken Loda, FBAN

### INPUTS

**WEATHER SUMMARY** See the weather forecast preceding.

### FUELS CONDITIONS

Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, whitethorn and manzanita, or areas of dead and down, and approximately 10-year old conifer and brush reproduction after previous fires. Brush live moisture is at 100%, conifers 150%. Fine dead fuel moisture will be 25% or higher at 0700, and could get to 8% by mid-afternoon; 1000-hr fuels are at 15-17%.

### OUTPUTS

#### GENERAL FIRE BEHAVIOR

☺☺☺ Another good day for mop-up and repair ☺☺☺

Very good RH recovery continues to inhibit overnight burning. The fire's main behavior factors are heavy dead and down fuels that are still dry, with steep topography.

The forecast weather will support continued burnout of heavy fuels, and could support low intensity creeping fire behavior.

Spotting: Rollout potential exists in many areas. However, spotting success will be low, as the probability of ignition will be 0% at the start of shift and will go only to 40% during peak burning conditions.

#### SPECIFIC FIRE BEHAVIOR

Interior burnout of heavier fuels (1000- and 10,000-hours) will continue. The continued warming and drying may reveal a few more today. At elevations below 5500' during the peak burning period (1400 to 1800) we might see 2 ch/hr spread and 1' flame lengths around the heavies still burning.

### SAFETY

**SAFETY** Continue to watch for rollout, snags, and falling fire-loosened rocks.

**AIR OPERATIONS** There are no weather or fire behavior concerns that should affect air operations today.

## HEALTH AND SAFETY MESSAGE

***SAFETY*** starts with ***YOU***

We are **ALL** accountable for **SAFE** behaviors

INCIDENT: Salmon August Complex

DATE: 09/22/2017

Operational Period: Day

### Major Hazards and Risks:

Driving

Snags

Fatigue

### Fire Order of the Day – Retain control at all times

#### Narrative:

If your mind wanders, for even a moment, while driving the roads in and around the fire the consequences can be fatal. If you get a call or need to look at a map pull the vehicle over until you can drive without distraction, or drive with a partner. Animals move fast and are unpredictable...they do a lot of damage. The drop offs, really drop off and the shoulders in places are real soft.

Snags are everywhere on this fire and if burnt trees are not around, then certainly live ones are. Keep your head on a swivel at all times when out on the fire line. Before you take a break make sure to scout your area. It seems every tree may fall, the question is when.

It's been a long season and possibly it could continue. Pace yourself. With the steep terrain on this fire and the need for attention to detail with rolling material, slippery footing, snags and narrow winding roads it may be a situation where work assignments take a bit longer to complete. Get proper rest. Take breaks and continue to hydrate and eat...and above all else – keep a close eye on your fellow firefighters.

### SNAG S.O.P.

- Identify snags, hazard trees and unstable rocks (Look up, look down, look around).
- Identify kill zone and inform others – 2 ½ tree length. (Flag, describe or post lookouts to keep others out). Consider wind and weather.
- Felling of snags and hazard trees will proceed line construction and mop-up.
- Felling by QUALIFIED FALLERS ONLY.
- Secure, eliminate or avoid unstable material on slopes.
- Remember logs can/do roll, spin, slide & shift.
- Do not work below dozers or other firefighters.
- Rocks can/do roll, slide & bounce
- No class B/C felling after dark.
- Establish drop points, rest areas, sleeping and parking areas free of snags.

Remain alert to noise or movement – it could signal immediate danger. Face your danger to decide escape.

## Short-Haul Operations

### *CAPABILITIES*

- During an operational Short-Haul the helicopter is capable of inserting Short-Haulers into an area with tight canopy cover and or technical terrain. (**minimum canopy opening of 15' x 15'**)
- Available haul line lengths range from 100 feet to 350 feet
- Short hauler and or medical gear can be delivered to the medical scene even if extraction by short-haul is not necessary

### *ORDERING*

- EMT or Medical Incident IC determines medical extraction is required
- Utilize local established procedures or MIR (IRPG pg. 108,109) line #5
- Confirm aircraft type, estimated time of arrival and frequency
- Be prepared to give incoming aircraft site selection information: hazards terrain wind and brief patient update

PROCESS: During the insertion and extraction process ground personnel must be clear of the area. The helicopter will fly to the latitude and longitude provided, contact ground personnel with the patient utilizing the identified air-to-ground frequency. **Upon completion of the short-haul recon and size up, a patient update will be communicated from the ground and the aircraft will fly to a landing zone (LZ) to configure for short-haul operations.** The helicopter will be monitoring the appropriate air-to-ground, air guard and victor frequencies. From this point, ground resources should only contact the helicopter in case of an emergency.

### *ON SCENE*

#### EXPECT THE FOLLOWING

- 1 or 2 rescuers (at least one qualified as an EMT)
- Basic Life Support bag (BLS) to include a backboard if needed
- All equipment/hardware necessary for extraction

#### BAUMAN BAG

The Bauman Bag is used for patients on a backboard; it accommodates all backboards to include the TRS

#### SCREAMER SUIT

The screamer suit is used for patients not requiring the use of a backboard

**A patient on a backboard, TRS, SKED or litter will be inserted into the Bauman Bag**
