## INCIDENT OBJECTIVES (ICS 202)

<b>1. Incident Name:</b>		<b>2. Operational Period:</b> DAY	
SALMON AUGUST COMPLEX		Date/Time From: 09/23/2017 0700 SAT	Date/Time To: 09/23/2017 2000 SAT
<b>3. Objective(s):</b>			
<p><b>LEADERS INTENT:</b> The highest priority is to minimize risk to firefighters and the public by continually using the risk management process. It is expected that every person assigned in a leadership role does a risk assessment and provides appropriate mitigation measures prior to engaging in any activity.</p> <p><b>INCIDENT OBJECTIVES:</b></p> <ul style="list-style-type: none"> <li>• Firefighter and public safety take precedence over all other incident objectives.</li> <li>• Adopt decisions and actions that thoughtfully consider firefighter exposure especially with respect to communications, driving, aviation, and mop-up.</li> <li>• Coordinate closely with local cooperators to protect private property, resources and infrastructure within and adjacent to the planning area.</li> <li>• Maintain and strengthen relationships with partner agencies, organizations, tribes, and the community.</li> <li>• Minimize suppression related impacts to wilderness characteristics through use of natural barriers, trails, and existing fire scars.</li> <li>• Implement suppression repair actions to the standards identified in the Salmon August Repair Plan (September 18, 2017).</li> </ul>			
<b>4. Operational Period Command Emphasis:</b>			
Deep Fire is operational priority number 1, implementation of suppression repair on the Wallow Fire is priority number 2.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER</b> 35	<b>TYPE OF INCIDENT:</b> Wildland Fire
<b>INCIDENT NAME:</b> Salmon August Complex	<b>OPERATIONAL PERIOD</b> Day shift 9/23/17
<b>DATE ISSUED:</b> 22 September 2017	<b>TIME ISSUED:</b> 2200

### INPUTS

**WEATHER SUMMARY** See the weather forecast preceding.

### FUELS CONDITIONS

Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, whitethorn and manzanita, or areas of dead and down, along with approximately 10-year old conifer, brush, and grass reproduction after previous fires. Brush live moisture is at 100%, conifers 150%. Fine dead fuel moisture will be about 17% at 0700, and could get to 6% by mid-afternoon; 1000-hr fuels are at 15-17%.

### OUTPUTS

#### GENERAL FIRE BEHAVIOR

☺☺☺ Another good day for mop-up and repair ☺☺☺  
▲▲▲ Burning conditions creeping up ▲▲▲

Very good RH recovery continues to inhibit overnight burning. The fire's main behavior factors are heavy dead and down fuels that are still dry, with steep topography.

The forecast weather will support continued burnout of heavy fuels, and could support low intensity creeping fire behavior.

Spotting: Rollout potential exists in many areas. However, spotting success will be moderate, at best, as the probability of ignition will be 10% at the start of shift and will go only to 50% during peak burning conditions.

#### SPECIFIC FIRE BEHAVIOR

Interior burnout of heavier fuels (1000- and 10,000-hours) will continue. The continued warming and drying may reveal a few more today. In those few areas where fire persists, during the peak burning period (1400 to 1800) we might see 2 to 3 ch/hr spread and 1' flame lengths.

### SAFETY

**SAFETY** Continue to watch for rollout, snags, and falling fire-loosened rocks.

**AIR OPERATIONS** On the western portion of the fire the afternoon terrain winds (generally from the SW) interacting with the ridge-level NE winds could result in extra turbulence along the ridges.

# Safety Message

## SAFETY IS OUR FIRST PRIORITY

*Fire fighter safety comes first on every fire, every time*

### "VALUES AT RISK"

*YOU are the most Important Value at Risk in the Forest*

**Complacency**

### Major Hazards and Risks

- Mop Up – Burns**
- Steep slopes - Slip, Trip and Falls**
- Snags – damaged trees and wind**
- Dehydration – water and**
- Driving – Public, Critters, Roads**

**Communication**

- Firefighter safety comes first on every fire, every time.
- The 10 Standard Firefighting Orders are firm—we don't break them, we don't bend them.
- Every firefighter has the right to know that his or her assignments are safe.
- Every fireline supervisor has the responsibility to confirm that safe practices are known and observed.
- There is no tree or piece of property that is worth the life of a firefighter.

### COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

- Most incidents happen on smaller fires or isolated portions of larger fires.
- Fires respond quickly to shifts in wind direction or wind speed.
- Flare-ups generally occur in deceptively light fuels.
- Fires run uphill surprisingly fast in chimneys, gullies, and on steep slopes.
- Helicopters and air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups and cause weak trees to fall.
