FORECAST ISSUED: 2000 9/1/2017

Incident Meteorologist - John Franks
IMET (t) - Ryan Fliehman

...EXCESSIVE HEAT WARNING THROUGH MONDAY...

<u>WEATHER DISCUSSION:</u> Extreme heat and very dry conditions will be present throughout the complex. Temperatures reach the triple digits in valleys and 90s on ridges. Humidity will drop into the lower to middle teens. Poor humidity recoveries will continue for mid-slopes and ridges.

WEATHER FORECAST FOR TODAY:

WEATHER: Very hot and dry. Smoke in the valleys.

TEMPERATURES: Highs 90-96 on ridges. 97-102 in valleys.

HUMIDITY: 25-30% morning, bottoming out 10-16% late afternoon.

20 FT WINDS:

RIDGETOP - Southeast 3-6 mph in the morning, shifting to the west 4-7 mph with gusts to 10 mph in

the afternoon.

SLOPE/VALLEY – Afternoon upslope/upvalley 2-6 mph.

HAINES INDEX: 5 LAL: 1 STABILITY/INVERSION: Strong inversion weakening after 1400 on ridges.

WEATHER FORECAST FOR TONIGHT:

WEATHER: Smokey under a strong inversion. Poor humidity recoveries for ridges and mid-slopes.

TEMPERATURES: Lows 64-69 on ridges, 55-60 in valleys.

HUMIDITY: Mid-slope and ridges: Recovering 16-21% through 11pm then 25-35% by morning.

Valleys: Good recoveries 40-60%. Along Klamath River 50-70%.

20 FT WINDS:

RIDGETOP - West 4-7 mph gusting to 10 mph and becoming light after midnight.

SLOPE/VALLEY – Downslope/downvalley 2-5 mph.

HAINES INDEX: 5 LAL: 1 STABILITY/INVERSION: Strong inversion setting up after 2100 hours.

<u>Sunday through Thursday:</u> High pressure remains in place through Monday leading to very hot and dry conditions. Overnight humidity recoveries will be poor, and inversions will remain strong. Increasing winds are expected for ridges Sunday afternoon, persisting through the overnight hours. This coupled with poor overnight recoveries leading to increased fire weather concerns. Monsoonal moisture streams into the region from Tuesday onward leading to an increased chance for thunderstorms.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The ridge of high pressure and smokey skies will cause fire growth to be driven by fuel loadings, terrain and slope/valley winds. Due to extremely dry fuel loadings expect continued active surface fire with crown fire activity supported by the surface fire. Surface rates of spread will generally govern the fire spread, with some enhancement from spotting. Surface fires will be fairly intense with high resistance to control.

Rate of Spread: Timber/Brush/Heavy Down/Dead: 5-15 Chains per hour (head fire)

0.5-1 Chains per hour (backing fire)

Flame Length: Timber/Brush Heavy Down/Dead: 5-12 Feet (head fire)

1-3 Feet (backing fire)

Crown Fire Potential: Isolated to group torching with crown runs possible where the fires are unshaded by smoke or winds align with slope. Crown fire spread rates approximately 0.5 mile per hour.

Spotting Distance: 0-0.3 mi (under developed smoke columns, spotting up to 1.5 miles is possible)

Probability of Ignition: Day 80-90%, Night 50-70% (model)

Rollouts: Watch for locations where rollout is set up for and uphill run

SPECIFIC:

Branch I: Any areas of fire growth will be influenced by terrain and upslope/upvalley winds. Fire activity will be greatest in heavy fuels. Hot areas near Thompson Creek on the north section have potential to cross the creek and spread upslope. Limited spread expected to the east into the Red Buttes wilderness.

Branch II: The branch is expected to remain smoked out under the persistent inversion do fire activity will be influenced by fuels, terrain and upslope/upvalley winds. Watch for spots across the highway due to rollout. Growth in the western section of the Branch is expected to slow. Interior islands and fingers will continue to burn together.

Branch III: Fire growth will generally be upslope/upvalley growth. Spread through rollout and backing expected to continue. Fire spread expected to continue towards the South Fork of the Smith River. Upslope/upvalley growth continuing in the Siskiyou Wilderness. Fire spread in the southeast corner of the Young where it joined with Oak will continue in the Clear Creek drainage and into Doe Creek.

AIR OPERATIONS

Today will likely be smokier than yesterday. Visibilities will likely be poor all day.

SAFETY

Don't lulled into a false sense of security due to not being able to see fire activity because of smoke.

SAFETY MESSAGE

September 2, 2017 Eclipse Complex

Lookouts*** Communication*** Escape Routes*** Safety Zones

Interactions with public: The Bigfoot amboree is in full swing today and tomorrow. Be careful driving around camp. Follow the modified traffic patterns. Have patients with traffic and or civilians that may wonder in or near our camp. Be respectful, courteous and professional. You represent the Klamath National Forest, California Incident Management Team 1, as well as your home agency.

Remain Flexible: With the National preparedness level at 5, and California preparedness level at 4, resource orders are difficult to fill. This means that you may be asked to move to different locations on the fire at any time. Ensure you understand your new work assignment, location and communications plan. Arrive there safe and obtain a good briefing from your newly assigned supervisor. If you're not clear on something, take the time to get clear instructions and make sure you understand.

Night Shift:

Night issues to be aware of include:

- Snags falling onto roads, rocks and roll out along highway 96.
- Increased traffic associated with the festival this weekend around Happy Camp.
- Smoke settling in overnight reducing visibility
