CA-KNF-006098 Complex Fire Weather Forecast

FORECAST NO: 30

NAME OF FIRE: KNF-006098-Complex

PREDICTION FOR: 0600-0600

UNIT: Klamath NF- Happy Camp RD

SHIFT DATE: 9/4-9/5

SIGNED: /s/

TIME AND DATE

Incident Meteorologist - John Franks IMET (t) - Ryan Fliehman

FORECAST ISSUED: 2000 9/3/2017

...RED FLAG WARNING THROUGH 9AM TODAY... ...HEAT ADVISORY THROUGH 11PM TONIGHT...

WEATHER DISCUSSION: Gusty northeast winds will start the day on area ridges. Along with low humidity, these conditions will keep the Red Flag Warning in place through mid-morning. Winds will slowly taper by midday. If smoke is able to clear, temperatures will increase significantly.

WEATHER FORECAST FOR TODAY:

WEATHER: Gusty northeast winds in the morning, tapering off by midday. Smokey.

TEMPERATURES: Highs 87-93 for ridges and valleys. Lower in smoke filled valleys.

HUMIDITY: 15-30% morning, 13-19% late afternoon. Higher in smoke filled valleys 25-40%.

20 FT WINDS:

RIDGETOP - Northeast 15-20 mph gusting to 35 mph through mid-morning, tapering off by midday.

Light east winds by evening.

SLOPE/VALLEY – Afternoon upslope/upvalley 1-3 mph.

HAINES INDEX: 5 LAL: 1 STABILITY/INVERSION: Strong inversion weakening after 1400.

WEATHER FORECAST FOR TONIGHT:

WEATHER: Light and variable winds with smoke.

TEMPERATURES: Lows 63-69 on ridges, 52-58 in valleys.

HUMIDITY: Mid-slope and ridges: 15-20% through 11pm then 20-35% by morning.

Valleys: Good recoveries 40-60%. Along Klamath River 50-70%.

20 FT WINDS:

RIDGETOP – Light from the east at 3-7 mph.

SLOPE/VALLEY - Downslope/downvalley 2-5 mph.

HAINES INDEX: 4 LAL: 1 STABILITY/INVERSION: Inversion setting up after 2100 hours.

Tuesday through Thursday: Tuesday marks the first significant day in an overall pattern change for the region. Limited moisture from remnants of Tropical Storm Lidia enters Tuesday into Thursday, leading to an increased chance for thunderstorms. The best chance for thunderstorms looks to be on Wednesday. The pattern change will allow for better humidity recoveries and more seasonal temperatures.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

GUSTY NORTHEAST WINDS until around midday. Due to strong winds and poor humidity recoveries the fires will have remained active all night. Areas of heat exposed to the northeast winds will be active and spreading to the southwest. Fire activity sheltered from the northeast winds will be influenced by terrain and fuels. Fire behavior should still be primarily surface spread enhanced by spotting from torching and short crown runs. Fire activity will moderate as winds calm but remain active overnight due to poor humidity recoveries.

Rate of Spread: Timber/Brush/Heavy Down/Dead:

5-20 Chains per hour (head fire)

0.5-1 Chains per hour (backing fire)

Flame Length:

Timber/Brush Heavy Down/Dead:

5-12 Feet (head fire) 1-3 Feet (backing fire)

Crown Fire Potential: Isolated to group torching. Crown runs possible where the fires are unshaded by smoke or winds align with slope. Crown fire spread rates approximately 1.0 mile per hour.

Spotting Distance: 0-0.6 mi (under developed smoke columns, spotting up to 1.5 miles is possible)

Probability of Ignition: Day 60-90%. Night 40-80% (model)

Rollouts: Watch for locations where rollout is set up for and uphill run

SPECIFIC:

Branch I: Areas of heat low in Thompson Creek on the north perimeter have potential to cross the creek and spread upslope. In the Red Buttes Wilderness expect fire to back downslope in the headwaters of the Steve Fork River. If fire gets low enough on the slope, winds and slope will come into alignment with head fire spread into Steve Lake Basin. Spot fire east of Buck Peak will spread to the southwest.

Branch II: The branch is expected to remain smoked out under the persistent inversion. Fire activity will be influenced by fuels and terrain. Spots across the highway due to rollout are still possible. Growth to the south/southwest in the western section of the Branch is expected to continue. Interior islands and fingers will continue to burn together.

Branch III: The southern perimeter of fire in the South Fork of the Smith River Valley will spread down valley if exposed to the northeast winds. Fire spread expected to continue towards the South Fork of the Smith River. Spread through rollout expected to continue. If the fire crosses the river spread rates will increase dramatically. Fire spread to the southwest expected to pick up in Clear Creek and Doe Creek.

Branch IV: Due to the fire's location higher on the ridgetops northeast winds will cause continued spread in the headwaters of the East Fork of Seiad Creek and the West Fork of Horse Creek with the potential to spot lower in the drainages. Spotting through rollout with upslope/upvalley spread likely.

AIR OPERATIONS

Visibilities will likely be poor all day but there may be some clear air over the northeast perimeter of the Cedar Fire.

SAFETY

Steep variable terrain can cause rapid changes in fire behavior. Maintain good lookouts.

SAFETY MESSAGE

September 4, 2017 Eclipse Complex

<u>Smoke Hazards</u>: With all the fires in the area combined with the current weather, we are adversely impacted by the smoke. This has created an unhealthy environment to be in long term. There are however, a few things that we can do the minimize the impacts.

Everyone:

- ✓ Utilize vehicle air conditioners selected to re-cycle with windows rolled up.
- ✓ Drink plenty of fluids to flush toxins from your body.
- ✓ Drive to location out of smoke if feasible.

Operation:

- ✓ Minimize mop up.
- ✓ Reduce exposure by limiting shift length, rotate crews out of heavy smoke areas.

Camp:

- ✓ Limit outdoor activity.
- ✓ No strenuous physical activity.
- ✓ Keep windows and doors closed.
- ✓ If using air conditioning, replace air filter with HEPA rated filter if possible.
- ✓ Clean air room with filtrations system.
- ✓ Avoid using swamp coolers.
