## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

The fires are burning in timber fuels with some brush and grass intermixed. Fires within the complex continue to exhibit passive to active fire behavior with single and small group tree torching. Fire will continue to spread actively on exposed ridges and when aligned with slope and wind. Surface fire with observed fire behavior of 2-7ch hr and FL of 1-3'. Expect short range spotting with slope runs and rates of spread 9-12ch hr when wind and slope align.

**Crown Fire Potential:** Minimal primarily isolated single tree to small group torching due to understory surface fire spread preheating canopy thru heat and smoke convection.

**Spotting Distance:** Within 1/4 mi. However under a well developed smoke column spotting could range to up to 3/4 of a mile with wind exposure. Most spotting will be due to roll out.

**Probability of Ignition:** Day 40-60%, Night 10-20%

#### SPECIFIC:

**Branch I:** Areas of smoldering and creeping on the north perimeter of Cedar Fire is expected. Active backing flanking fire possible in the afternoon. Expect moderate activity if fire crosses Thompson Creek.

**Branch II:** No to minimal fire activity is anticipated near the containment lines.

The Buck Fire and DIV K will continue to burn. Backing and flanking surface spread should be anticipated with chance for single tree torching and group torching, any rocky terrain will hinder progression yet there is plenty of fuel to support limited fire progression.

**Branch III:** Surface fire activity likely where heat remains on the slopes of the South Fork of the Smith River in the afternoon. Areas of heat below Blue Ridge will become more active. Any run at Blue ridge could cause short range spotting with some potential fire growth. Watch for isolated heat along Smith River at the Prescott Fork and areas of active fire in the Harrington Creek drainage. Fire has the potential cross into the Smith River Recreation area to the South.

**Branch IV:** Abney fire will continue to slowly back down into the Horse Creek Drainage on the SE portion of the fire. Areas in DIV X of the Abney will continue to burn out. Look for more fuels along Horse Creek to become available to support fire spread. More creeping, smoldering and smoke production but minimal growth is expected.

## AIR OPERATIONS

Clouds increasing thru the operational period with smoke could hinder aircraft use.

## SAFETY

- Identify the fires ability to run with head fire when slope and wind align.
- Un seen rollout can reposition the fire on the slope and compromise you and the position of your crew.

Human Resource Message  
September 17, 2017

*Thought for the Day*

**FIRE**

Fatigue..... Be aware of fatigue having a negative impact on your conduct and speech

Integrity..... Integrity and Honesty are vital on a fire. If you mess up, fess up, whatever you did can most likely be fixed if you report it as soon as you are aware of it.

Respect..... Treat others as you would like to be treated

Example..... Set an example. Realize you influence others around you, therefore, always conduct yourself in a professional and competent manner, but still have fun!

Do the difficult things while they are easy, and do the great things while they are small. A journey of a thousand miles must begin with a single step. – Lao Tzu-
