# INCIDENT ACTION PLAN

## MODOC JULY COMPLEX

CA-MDF-000671 P5K7YC (0509)

Wednesday

### OPERATIONAL PERIOD

WEDNESDAY, AUGUST 2, 2017

0600-1800 HOURS

Wednesday

## INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period:		DAY
MODDOC JULY COMPLEX	Date/Time From:	08/02/2017 0600	WED
	Date/Time To:	08/02/2017 1800	WED

**3. Objective(s):**

- Provide for the safety of all responders by utilizing national Risk Management Standards and the implementation of appropriate mitigations.
- Share critical information affecting public safety so timely decisions and actions can be implemented.
- Reduce firefighter exposure by only engaging fire assignments with the highest probability of success.
- Engage cooperators and stakeholders to jointly provide for the defense of communities, infrastructure and economic interests.
- Utilize local resource specialists to identify and protect sensitive sites and cultural resource values by minimizing impacts from suppression operations.
- Maintain and enhance community, County, State, National Forest and stakeholder relationships through accurate and timely dissemination of information.
- Identify, assess and implement suppression repair needs, where appropriate in coordination with the Resource Advisor following agency policy.
- Manage incident costs effectively for the values at risk through regular and ongoing cost analysis.

**Objectives:**

**4. Operational Period Command Emphasis:**

**Primary:**

Using a full suppression strategy, minimize the size of the fires through the use of direct attack where safe to do so.

**Alternate:**

When not feasible or safe to go direct use indirect attack to minimize fire size.

**Contingency:**

Use indirect attack tactics at major roads and natural barriers to suppress fire and minimize firefighter exposure to extreme fire behavior.

**Emergency:**

Withdraw fire personnel to safety zones or ICP and ensure accountability for all personnel.

**General Situational Awareness:**

- Heads up for fire weather and fire behavior.
- Use caution while driving on all incident roads.
- Heads up for wildlife and cattle.
- Continue hydration efforts.

**5. Site Safety Plan Required?** Yes  No

**Approved Site Safety Plan(s) Located at:**

**6. Incident Action Plan** (the items checked below are included in this Incident Action Plan):

## Modoc July Complex Fire Weather Forecast

FORECAST NO: 12  
PREDICTION FOR: 0600-1800 Day shift  
SHIFT DATE: 8/2/17  
TIME AND DATE  
FORECAST ISSUED: 2200 hours on 8/1

NAME OF FIRE: Modoc July Complex  
UNIT: CA-MDF  
SIGNED: *R. Walbrun*  
Incident Meteorologist: Ryan Walbrun-IMET

**..Near record heat, low humidity and Haines 5...**  
**WEATHER DISCUSSION:** The persistent critical fire weather pattern will continue today across the complex. High temperatures near 100 degrees with minimum humidity near 10% once again. The cumulative effects of this heat wave are taking a toll on the fuels as well as the human body. Hydrate! We are looking for subtle changes today as the strong ridge of high pressure is over the region. Light north winds this morning will turn more Westerly this afternoon across both the Steel and Cove Fires. Wind speeds will be light but this direction will be adverse to the line on both fires. Haines 5 conditions will continue once again. On Tuesday the fire burned hot enough to produce some late day lightning. We need to expect plume dominated late day fire behavior. In addition isolated thunderstorms nearby always have the possibility to push outflow boundaries across your fire. Finally, be aware that smoke and ridges can often hide the view of the late day fire plumes. Columns and cumulus will tend to collapse near shift change.

**WEATHER FORECAST for Today:**

**WEATHER:** Widespread smoke otherwise sunny then afternoon cumulus build ups. Hot and dry.

**HIGH TEMPERATURES:** 88-94 smoke shaded areas. 95-100 full sunshine. Little change.

**HUMIDITY:** Afternoon minimum 9-15%...locally 18% under heavy smoke. Little change.

**20 FT WINDS:**

**RIDGETOP -** Northeast 3-6 mph early becoming West 5-10 mph in the afternoon.  
Some late afternoon gusts 10-12 mph.

**SLOPENALLEY -** Light then afternoon upslope 2-5 mph gusts 7-9 mph.

**HAINES INDEX: 5 STABILITY/INVERSION:** Strong morning inversion becoming unstable after 1 pm.

**Wednesday Night:** Fire plumes and cumulus will dissipate by 8 pm. RH recovery will be poor through 11 pm then some recovery to around 25-35% during the late night hours. Thermal belts in the timber around Adin Pass and Blue Mountain may see locally poorer RH recovery. Otherwise mostly clear with overnight lows 68-72. Ridge winds will become Northeast 5-10 mph over the Steele Fire with light downslope winds in the lower slopes. The Cove Fire will likely hold onto Westerly winds tonight.

**Thursday thru Saturday:** The heat will continue into Thursday with highs still in the 90s and low humidity in the teens. Isolated thunderstorms are forecast by Thursday afternoon and evening. Thunderstorm chances will become more likely by Friday afternoon as the ridge finally begins to weaken. Any initial thunderstorms will likely lead to new starts across the over 1 million acres the complex currently covers. Temperatures will stay seasonably hot with highs closer to 90 over the weekend while the threat of thunderstorms continues.

**SAFETY INFORMATION:**

Heat related illness is one of the biggest hazards all crews are facing. Respect plume dominated fire behavior and make a plan early in the shift for when to back off if spotting becomes profuse. Do you have eyes on the column? Wind driven fire behavior is more likely on the Steele Fire where flashy fuels exist.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 014	<b>TYPE OF FIRE:</b> Wildfire Full Suppression
<b>FIRE NAME:</b> Modoc July Complex	<b>OPERATIONAL PERIOD:</b> Aug 2, 2017 0600 -- 1800 Day Shift
<b>DATE ISSUED:</b> August 1, 2017	<b>TIME ISSUED:</b> 2130
<b>UNIT:</b> Modoc National Forest	<b>SIGNED:</b>  Teresa Riesenhuber, FBAN

### INPUTS

**WEATHER SUMMARY:** *--See Fire Weather Forecast for more details --* *Haines Index: 5*  
 High Temperatures Szone 90-95°F; Nzone95-100°F Minimum humidity 9-15%. Winds: W 4-8mph afternoon gusts 12-15

**FUELS:** Mixed Conifer Timber with light to very heavy understory of grass, brush, logs, and smaller conifers; and various combinations of Sage/Grass/Juniper. All live fuel moistures are at average for this time of year; new growth is complete and live fuels are trending toward dormancy. Fuel Moistures: **Sage 90% 1hr fuels 3% 10hr fuels 3% 1000hr fuels 7%**

### OUTPUTS

**FIRE BEHAVIOR**  
**GENERAL: Persistent Unstable atmosphere, Record Breaking Heat, and Extremely Dry Conditions.**

Pyro-Cumulus development could occur again today. Expect very active to extreme fire behavior even without advanced column development. The primary carrier of fire is the brush and abundant dead fuels in all size classes. The fuelbeds are highly receptive to spotting. Although there is fire history in the area the grass and shrub fuel types regrow quickly, therefore old fire scars cannot be relied upon to hold or slow fires or provide safety zones.

**Probability of Ignition** = 90-100% **Spotting Distance**= up to 1/2 mi. from today's fire behavior **BI 63 ERC 85**  
**Rate of Spread** Head fire 10 - 190 ch/h with flame lengths 2 -14 ft Backing fire <7 ch/h with flame lengths < 3 ft

**SPECIFIC: Expect Extreme Fire Behavior All Day and Plan Accordingly.**

**North Zone:** Watch for sleeper heat becoming active and launching embers across the fireline. The lava rock combined with grass/brush/juniper fuel type can hold heat for days and with a little sunshine and wind, will get up and run again. Recommend lengthening your escape time due to the difficult lava rock terrain and plan for slopovers or spots.

**South Zone and Cove Fire:** All areas of the Cove fire and surrounding areas have potential to experience extreme fire behavior again. Plan for the plume dominated fire behavior. Yesterday's plume collapsed during shift change and for several hours the winds at Rush Creek RAWWS were 11-15mph with gusts 30-38mph. With those extreme conditions there could be spot fires miles away.

**Brush/Grass/Pinyon:** During the heat of the day, expect rapid rates of spread (30-190 ch/h) and high flames lengths (4-14 ft). High mortality in brush, needle draped brush, and grass growing right up under the brush will increase fire behavior. When juniper torches, it launches a bunch of embers as far as the wind will carry it. High winds, farther away the spots.

**Mixed Conifer Timber:** During the heat of the day, expect moderate to rapid rates of spread (5-40 ch/h) and flame lengths 2-12 ft. Single tree and group tree torching are likely even with low wind speeds, and especially where ladder fuels are abundant. In areas with heavy dead and down, expect complete consumption and weakening of trees and root structures.

#### **AIR OPERATIONS:**

Inversion may hinder visibility during morning hours. Hazy air all day.

### SAFETY

Fire behavior was already extreme last week and with this extended period of hot dry weather fire behavior has become exceptional. With each day we have ratcheted up the fire behavior. If you see an indicator of critical or extreme fire behavior, say something.

A well-developed column is an indicator of critical fire behavior, producing intense burring conditions, strong downbursts, and Plume-dominated fire behavior. Indicators of extreme fire behavior may be any or all of the following: group tree torching; fire whirls; frequent spot fires; smoldering fires pick up speed and increase in flame lengths; long range spotting; rapid rates of spread and increased fire behavior; downdrafts; precipitation from plume; lightning.

# Modoc July Complex – Safety Message

INCIDENT #CA-MDF-000671

DATE: 08-02-17 TIME: 0600 – 1800 Day

## TAKE 5 at 2

- This fire, like many others, has shown a history of becoming extremely active around 2 PM.
- Take 5 minutes at 2 PM to access your situational awareness and L.C.E.S.
- This also a good time to assess your strategy and tactics. Are they relative to your mission?

## Escape Routes (LCES)

Escape Routes are the path the firefighter takes from their current locations, exposed to the danger, to an area free from danger. Notice that escape routes is used instead of escape route(s). Unlike the other components, there always must be more than one escape route available to the firefighter

- Have you timed your escape routes? The terrain here is very rocky and unstable.
- Think of a time when you were uncomfortably distant from your escape routes.
- Have you communicated your escape routes to your crews?

Take 5 at 2 !!!

## Mop up

- Conduct thorough briefing for all personnel (inside rear cover IRPG).
- Use all required PPE, including eye protection.
- Maintain proper spacing and overhead clearance.
- Be alert for stump holes and root cavities.
- Minimize exposure to smoke, and rotate personnel into clean air when practical.
- Evaluate unburned islands/Increase situational awareness.

## CIIMT 4 Safety Group

Pay attention to changes in the weather patterns!!!

14. WEATHER IS GETTING HOTTER AND DRIER

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	FIRE WEATHER	<ul style="list-style-type: none"> <li>• Winds increasing or changing direction.</li> <li>• Weather becoming hotter and drier.</li> <li>• Unstable atmosphere can promote rapid fire growth.</li> </ul>
ALL	DANGER TREES	<ul style="list-style-type: none"> <li>• Follow "Hazard Tree Safety" guidelines. IRPG pages 22.</li> <li>• Post lookouts, or use a spotter in mop-up areas with personnel.</li> <li>• Don't park vehicles or take breaks in high concentrations of hazard trees.</li> <li>• Establish trigger points for disengagement during high wind events".</li> <li>• Practice "Defensive Driving" techniques.</li> <li>• Use spotters when backing.</li> <li>• Always use headlights.</li> <li>• Use warning lights when working on roads or traveling in smoke..</li> <li>• Reduce speed when dusty, maintain adequate spacing with other vehicles.</li> <li>• Some roads are dead end with poor turn around, scout roads first.</li> <li>• Watch for livestock</li> </ul>
ALL	TRAFFIC & DRIVING	<ul style="list-style-type: none"> <li>• Drink 2 to 1 ratio of water to sports drinks.</li> <li>• Take frequent breaks, minimum of 10 minutes every hour.</li> <li>• Recognize symptoms of HEAT RELATED ILLNESS which include: Lack of energy, headaches, dizziness, lack of rest, no hunger, poor eating habits, hot skin, and lack of sweating</li> <li>• Size up prior to engagement.</li> <li>• Watch for multiple spots.</li> <li>• Ensure LCEs is in place.</li> <li>• Maintain Situational Awareness at all times.</li> <li>• Conduct thorough briefing for all personnel (inside rear cover (IRPG)).</li> <li>• Use all required PPE, including eye protection.</li> <li>• Maintain proper spacing and overhead clearance.</li> <li>• Be alert for stump holes and root cavities.</li> <li>• Minimize exposure to smoke, and rotate personnel into clean air when practical.</li> <li>• Evaluate unburned islands/increase situational awareness.</li> <li>• Follow " Aviation" Watch-Out Situations" on page 44, IRPG.</li> <li>• Don't plan on air resources for medical transport or resupply.</li> <li>• Refer to page 57, IRPG for directing bucket drops.</li> <li>• Ensure positive communication with all air resources.</li> <li>• Ensure communications are established with operators.</li> <li>• Use hand signals if other communications are unavailable.</li> <li>• Maintain a 50'-100' exclusion area around equipment.</li> <li>• Use a spotter when backing.</li> <li>• Keep alert for wildlife, rattlesnakes, insects, and plants. Watch footing and hand placement around rocks.</li> <li>• <b>Personal hygiene is #1 when it comes to Poison Oak Prevention.</b></li> <li>• Maintain situational awareness.</li> <li>• Watch for open areas and signs of improvements or irrigation systems.</li> <li>• Be aware of evidence that cultivation has occurred in the area.</li> <li>• If you stumble upon an area with probable cultivation, be extremely cautious, exit on the same route you arrived and notify your supervisor immediately</li> </ul>
ALL	HEAT RELATED ILLNESS (HRI) & DEHYDRATION	<ul style="list-style-type: none"> <li>• Drink 2 to 1 ratio of water to sports drinks.</li> <li>• Take frequent breaks, minimum of 10 minutes every hour.</li> <li>• Recognize symptoms of HEAT RELATED ILLNESS which include: Lack of energy, headaches, dizziness, lack of rest, no hunger, poor eating habits, hot skin, and lack of sweating</li> <li>• Size up prior to engagement.</li> <li>• Watch for multiple spots.</li> <li>• Ensure LCEs is in place.</li> <li>• Maintain Situational Awareness at all times.</li> <li>• Conduct thorough briefing for all personnel (inside rear cover (IRPG)).</li> <li>• Use all required PPE, including eye protection.</li> <li>• Maintain proper spacing and overhead clearance.</li> <li>• Be alert for stump holes and root cavities.</li> <li>• Minimize exposure to smoke, and rotate personnel into clean air when practical.</li> <li>• Evaluate unburned islands/increase situational awareness.</li> <li>• Follow " Aviation" Watch-Out Situations" on page 44, IRPG.</li> <li>• Don't plan on air resources for medical transport or resupply.</li> <li>• Refer to page 57, IRPG for directing bucket drops.</li> <li>• Ensure positive communication with all air resources.</li> <li>• Ensure communications are established with operators.</li> <li>• Use hand signals if other communications are unavailable.</li> <li>• Maintain a 50'-100' exclusion area around equipment.</li> <li>• Use a spotter when backing.</li> <li>• Keep alert for wildlife, rattlesnakes, insects, and plants. ### 8. MEDICAL EMERGENCY PROCEDURES

#### LINE MEDICAL EMERGENCY:

Crew Supervisor contact Division Supervisor/Operations with patient complaint, condition and location.

Division Supervisor/Operations contacts Communications:

- Division Supervisor/Operations to use "Injury or Incident communication protocol" on next page
  - Division Supervisor/Operations will run medical emergency on command channel
  - Communications will contact the Medical Unit Leader on Command channel.
- Medical Unit Leader will:
1. Have communications dispatch ground/air transport resources
  2. Notify receiving hospital of injury status.
  3. Develop primary and contingency transport plan
  4. Notify Incident Commander, Safety, Logistics and Operations

#### CAMP MEDICAL EMERGENCY:

Contact Communications with patient complaint/condition and location, via LOGs Net

- Medical Unit contacts:
  - Safety
  - Logistics
  - Operations
- Medical Unit Leader will:
1. Contact Communications to dispatch ground/air transport resources
  2. Notify receiving hospital of injury status
  3. Develop primary and contingency transport plan

## Air Transportation Triage

	<i>Ground or Air Ambulance to Hosp.</i>	<i>Transport to Med Unit</i>
<b><i>Mechanism</i></b>	<i>Hit by a falling tree or large branch Fall of 10' or more Insect bite with shortness of breath Signs of heat stroke (hot, dry, disoriented) Burn Injury greater than 1% body area</i>	<i>Minor dehydration Cut or laceration with bleeding controlled Minor bites and Stings Minor burns</i>
<b><i>Area Injured</i></b>	<i>Significant Blunt or Penetrating Trauma to Head, Neck, Chest, Abdomen or pelvis Any Arm or Leg fracture above the Joint</i>	<i>Minor blunt trauma Minor penetrating trauma Extremity sprains and strains Simple fracture below elbow or knee</i>
<b><i>Symptoms</i></b>	<i>Disoriented Chest Pain <u>or</u> Shortness of Breath Weak or absent radial pulse Pale, cold and sweating</i>	<i>Alert and oriented No shortness of breath Good pulses</i>

If air or ground ambulance is DELAYED:

*Package and transport patient to rendezvous with ambulance. Re-route EMS helicopter to rendezvous point as appropriate.*

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response.

The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.

STANDARD OPERATING PROCEDURES—FINANCE SECTION  
16 HOURS IS NOT A GUARANTEE - IT IS HOURS WORKED!!

---

**WORK REST CYCLE**

IT IS NATIONAL DIRECTION TO MEET 2 TO 1 WORK/REST RATIO (1 hour of sleep/rest for every 2 hours of work). Every effort shall be made to manage work hours so you don't exceed the maximum of 16 hrs. Work hours exceeding 16 hours shall be approved by your supervisor in advance, and a justification/mitigation form completed for review by Section Chief & approved by IC. It is each person's responsibility to comply with this direction to manage for fatigue and safety.

**OPERATIONAL SHIFTS**

Pay status for assigned overhead and crews on the fireline will not start prior to the posted briefing time and will terminate on arrival back in camp (except for debriefing—additional hours may be accrued by those required to attend debriefing). Supervisors will be allowed ½ hour prior to briefing and after return to camp to ready crew and equipment.

**DUTY STATUS**

Division/Group supervisors and Unit Leaders are responsible for establishing on and off duty status. The objective is a 2 to 1 work/rest ratio. Personnel will normally work, travel, and/or be placed on ORDERED standby 8 to 16 hours per day and be off duty 8 hours or more (breaks count towards 8 hrs). Off duty time will be in a non-pay status. Each federal employee is guaranteed **at least 8 hours** of pay status each 24-hour period (midnight to midnight) unless it is the first or last day of an assignment or stated otherwise in a contract or agreement.

**PERSONNEL/EQUIPMENT TIME REPORTING**

Personnel time will be reported to the Time Unit and daily once they are signed by the next level supervisor. OES resources will be monitored by OES Agency Rep (if assigned) for 2/1 Work Rest compliance. Situations entitling you to HAZARD PAY are to be noted in remarks (ie. HP=Uncontrolled Fireline, hovering hookups, low level flights, etc.)

Private Contracted Equipment time must be tracked on a Shift Ticket daily and hours on shift noted even if it is a daily rate. When swapping out operators you need to notify Finance as well as changing from single to double shift and vice versa.

Supervisor's - If you are responsible for daily tracking of equipment or personnel, please ensure you understand the agreement, and follow the rules provided in this document. Do not sign documents for resources you did not manage unless you have knowledge of their assignment hours.

**MEAL AND OTHER WORK BREAKS**

Compensable meal periods are the exception, not the rule (5 CFR 551.411 © and 29 CFR 785.19(a)). Until the fire is controlled, personnel on the fireline MAY BE compensated for meal periods if all of the following conditions are met: 1) The fire is not controlled and 2) The Operations Section Chief makes a decision that it is critical to the effort of controlling the fire that personnel remain at their post of duty and continue to work as they eat, and 3) The compensable meal break is approved by the supervisor at the next level and documented on CTR. For personnel in support positions, and fireline personnel after control of a fire, a meal period of at least 30 minutes must be ordered and taken for each work shift of eight hours or more. In those situations where personnel cannot be relieved from work and must remain at a post of duty, a meal period may be counted as time worked, which will be compensable. **If breaks are NOT able to be taken, CTR should have a statement in remarks explaining the situation. Kitchen closes at 2200 so show dinner break unless you went off clock by 2130.**

## Human Resource Specialists

We all send subtle messages to the people around us through our body language, word choice and behavior. Whether intentional or unintentional, verbal or non-verbal, our actions can come across as hostile, derogatory, or negative. Be hyperconscious of the language you use to interact others. Small details can make a difference.

# TRAINING SPECIALIST MESSAGE

COMMAND & GENERAL STAFF  
and  
ASSIGNED RESOURCES  
AT THE MODOC JULY COMPLEX

If you have a Trainee please make sure  
That they have checked in with the Training Specialist  
Located in the Trailer Across from Resources @ the ICP.

This will ensure that they receive Credit for this Assignment.

Thank you!

Tom Reaves and Heather Grove

## **Smoke Exposure for Wildland Firefighters**

Inhalation of smoke is a safety concern that can potentially impair your performance and cause short and long term health impacts.

### **Current Research on Smoke Exposure**

The US Forest Service Missoula Technology Development Center is currently conducting a smoke exposure assessment study. Data is currently being collected to determine the levels of carbon monoxide and PM<sub>4</sub> that wildland firefighters are being exposed to on prescribed and wildfires all over the US. This information will be used to better understand the health risks associated exposure to smoke on firelines.

### **What is in Smoke? What can happen from short-term exposures?**

#### **Carbon Monoxide (CO) –**

- Higher concentration in closer proximities to the combustion source
- Moderate exposure can lead to shortness of breath and headaches
- High levels of CO can lead to headaches, confusion, and a person collapsing on exertion
- You can recover from short-term exposures

#### **Particulate Matter (PM<sub>4</sub>) –**

- Particles that are small and can be inhaled deep in the lungs
- Deposits into the respiratory tract
- Can carry other chemicals into the body
- Short-term exposure can suppress the immune system and cause airway distress and irritation that can lead to shortness of breath, coughing and a sore throat

### **Long-Term Health Impacts**

#### **Potential Health Impacts (not studied in wildland firefighters) –**

- Chronic respiratory diseases (COPD, Bronchitis, Emphysema)
- Heart disease
- Cancer

#### **Wildland Firefighters –**

- Research study found significant associations between the greater number of years worked as a wildland firefighter and heart arrhythmia, hypertension and having had knee surgery

### **Reducing Exposure to Smoke - Mitigation Strategies**

- Mop-up – when conditions allow, mop-up only enough to secure line (50ft vs. 300 ft)
- Holding – if possible rotate crews or individuals in and out of areas with higher smoke exposure
