INCIDENT ACTION PLAN MODOC JULY COMPLEX CA-MDF-000671 P5K7YC(0509)

THUNDERSTORM SAFETY PLAN

- Fireline personnel need to ensure they have an Incident Response Pocket Guide.
- Incident Meteorologist will monitor developing thunderstorms.
- Incident Meteorologist will broadcast developing thunderstorm activity and path information.
- Fireline Supervisors will use the IRPG page 21 guideline and the NWCG 6 Minutes for Safety Thunderstorm guidelines to ensure the safety of fireline personnel during the thunderstorm event.
- Incident Meteorologist will monitor conditions and advise when hazardous conditions have dissipated.

- Do not lie down.
- The best position is sitting on the pack or crouching with feet close together.
- Avoid grouping together. Keep a minimum of 15 feet between people when possible.
- Removing work boots will not provide safety if stocking covered or bare feet are then in contact with the ground—don't bother!
- Handheld radios (with short rubber antennas) or cell phones are safe to use. Communication is vital to crew safety. Do not use land line radios or radios with elevated antennas.
- Wide, open spaces are better than trees or clumps of trees in the vicinity. Ridge tops, etc., should be avoided.
- If you feel the hair on your arms or head "stand up," there is a high probability of a strike in the vicinity. Crouch or sit on a pack.
- Put down all tools.
- Take shelter in vehicles if possible.

MAPS

DAY OPERATIONAL PERIOD
SATURDAY
AUGUST 5, 2017
0600-1800 HOURS

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period:	DAY	Date/Time From:	Date/Time To:
MODOC JULY COMPLEX	08/05/2017 0600	SAT	08/05/2017 1800	SAT
3. Objective(s): Objectives: <ul style="list-style-type: none"> • Provide for the safety of all responders by utilizing national Risk Management Standards and the implementation of appropriate mitigations. • Share critical information affecting public safety so timely decisions and actions can be implemented. • Reduce firefighter exposure by only engaging fire assignments with the highest probability of success. • Engage cooperators and stakeholders to jointly provide for the defense of communities, infrastructure and economic interests. • Utilize local resource specialists to identify and protect sensitive sites and cultural resource values by minimizing impacts from suppression operations. • Maintain and enhance community, County, State, National Forest and stakeholder relationships through accurate and timely dissemination of information. • Identify, assess and implement suppression repair needs, where appropriate in coordination with the Resource Advisor following agency policy. • Manage incident costs effectively for the values at risk through regular and ongoing cost analysis. 				
4. Operational Period Command Emphasis: Primary: Using a full suppression strategy, minimize the size of the fires through the use of direct attack where safe to do so. Alternate: When not feasible or safe to go direct, use indirect attack to minimize fire size. Contingency: Use indirect attack tactics at major roads and natural barriers to suppress fire and minimize firefighter exposure to extreme fire behavior. Emergency: Withdraw fire personnel to safety zones or ICP and ensure accountability for all personnel. General Situational Awareness: <ul style="list-style-type: none"> • Fire weather warning. • Heads up for possible dry lightning and increased fire behavior. • Monitor cumulus activity due to the chance of erratic winds and down drafts. • Keep your situational awareness current. 				
5. Site Safety Plan Required? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Approved Site Safety Plan(s) Located at:

Modoc July Complex Fire Weather Forecast

FORECAST NO: 18

NAME OF FIRE: Modoc July Complex

PREDICTION FOR: 0600-1800 Day shift

UNIT: CA-MDF

SHIFT DATE: 8/5/17

SIGNED:

Incident Meteorologist Trainee: Jimmy Taeger

TIME AND DATE
FORECAST ISSUED: 2200 hours on 8/4

...Red Flag Warning Saturday for Dry Lightning...
...Fire Weather Watch Sunday for Dry Lightning...

WEATHER DISCUSSION: Warm weather, with low afternoon relative humidity, will continue Saturday into the weekend. Isolated to scattered thunderstorms are expected over the weekend, with a chance of dry lightning in the afternoons and evenings. The possibility of dry lightning has prompted a Red Flag Warning for Saturday afternoon and evening, and also a Fire Weather Watch for Sunday afternoon and evening.

Thunderstorms imply the possibility of gusty and erratic winds

WEATHER FORECAST FOR TODAY:

WEATHER: Widespread smoke. Otherwise, partly cloudy with afternoon cumulus and a 30% chance of dry thunderstorms.

HIGH TEMPERATURES: 84-88 in smoke shaded areas and 89-93 in full sunshine. 2 degrees lower.

HUMIDITY: Afternoon minimum 12-16%...locally 20% under heavy smoke and clouds. 2% higher.

20 FT WINDS:

Steele Fire - West 3-6 mph early, becoming West-Northwest 6-9 mph with gusts to 15 mph in the afternoon. Strongest winds likely in Branch II Div I/K.

Cove Fire - Light winds becoming Southwest 4-8 mph, with gusts to 10 mph in the afternoon.

SLOPEN/VALLEY - Light then afternoon upslope 2-5 mph gusts 7-9 mph. Lighter in shaded areas.

HAINES INDEX: 4

LAL: 3

STABILITY/INVERSION: Strong morning inversion becoming unstable after 1300.

SATURDAY NIGHT: Fire plumes and cumulus will dissipate by 2100. RH recovery will be poor through 11 pm then moderate recovery to 40-55% during the late night hours. Thermal belts in the timber around Adin Pass locally will have poorer RH recovery. Otherwise, partly cloudy with overnight lows of 59-65. West to Northwest winds 5-10 mph with gusts to 15 mph in the evening, becoming light and downslope after midnight.

SUNDAY THROUGH TUESDAY: Fire Weather Watch on Sunday for dry lightning. Thunderstorm chances increase Sunday and Monday, with greater chances of dry lightning Sunday. Seasonably warm through the period, with highs in the mid to upper 80s. Better overnight humidity recovery this weekend, around 60%. Westerly winds through the period, with gusts around 12 mph in the afternoons and evenings.

SAFETY INFORMATION: Keep an ear to the radio for weather updates, and seek shelter from lightning if a storm approaches. If you feel the hair on your arms or head "stand up," there is a high probability of a strike in the vicinity. Crouch or sit on a pack with your legs together. Take shelter in vehicles if possible.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 020	TYPE OF FIRE: Wildfire Full Suppression
FIRE NAME: Modoc July Complex	OPERATIONAL PERIOD: Day Shift Saturday 8/05/2017
DATE ISSUED: 08/04/2017	TIME ISSUED: 2:10
UNIT: CA-MDF-000671 P5KYYC	SIGNED: Brendan "Rip" Ripley (FBAN) 

INPUTS

WEATHER SUMMARY: **"RED FLAG WARNING TODAY FOR DRY LIGHTNING"**
 "FIRE WEATHER WATCH SUNDAY FOR DRY LIGHTNING"
 ***** WIND SCHEDULE *****
 Steele Fire: W 3-7mph early..... 1300 WNW 6-9mph G15
 Cove Fire: Light and variable early..... 1300 SW 4-8mph G10mph
 (See attached weather forecast)

OUTPUTS

FIRE BEHAVIOR

GENERAL: Extremely dry fuels will be receptive to the forecasted dry lightning strikes that may occur today. Though the Haines is forecasted at 4 (low potential for large fire growth) the same scenario occurred at the initial onset of the Modoc July Complex. Following an initial ignition, weather conditions can promote large fire growth. Forecasted Probability of ignition (PBI) for today is **60%** Shaded and **90%** Unshaded making the fuels very receptive to any strikes.

LOCAL THRESHOLDS – WATCH OUT

Combinations of any of these factors can greatly increase fire behavior:
Thresholds: **20' winds** over 5 mph **RH** less than 20% **Temp** over 90° **ERC** over 64 **BI** over 51
Forecasted: **20' winds**, 3-15mph **RH** 12-18% **Temp** 84-93° **ERC** 80-81 **BI** 52-69

Probability of Ignition: 60% Shaded 90% Un-shaded

SPECIFIC:

North Zone & Steele Fire: Expect any new starts or stop-overs to be wind driven fires accompanied by rapid rates of spread associated with lighter fuels. Heavier fuels have promoted spotting. Expect max spotting distance between ¼ - ½ mile. WNW winds will be unfavorable for South end of the fire.

South Zone & Cove Fire: Expect any new starts or stop-overs to be wind driven fires accompanied by rapid rates of spread associated with lighter fuels. Heavier fuels have promoted spotting. Expect max spotting distance between ¼ - ½ mile. SW winds may increase vulnerability if the fire were to reach Hwy 299 along the Narrows. This area of the fire has a high probability for fire spotting across the 299 due to the narrow canyon, steep slopes and receptive fuels in the timber understory. In addition another area of vulnerability is in the drainage along County Road 90, DIV-PP. Forecasted winds may align with the drainage and test the line. Any start may move into heavier fuels associated with the heavy timber fuel component.

AIR OPERATIONS:

VFR conditions are expected throughout the period.

THUNDERSTORM SAFETY

Observe the 30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions identified on Page 21 of the IRPG. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

NORTH ZONE

Modoc July Complex – Safety Message

INCIDENT #CA-MDF-000671

DATE: 08-05-17 TIME: 0600 – 1800 Day

With the predicted weather (heat, dry lightning) take the time to considered the following before you engage;

Standard Firefighting Orders
 Watch Out Situations
 LCES
 Escape Routes
 Safety Zones

Look Up, Down and Around
 Common Tactical Hazards
 Planning for Medical Emergencies
 Common Denominators of Fire Behavior on Tragedy Fires

Extreme Fire Behavior

Fire behavior for the past several operational periods have produced intense burning conditions. All crews should anticipate and plan their strategies and tactics based on current and expected behavior of the fire. Fire spotting has the potential to spot up to two miles in distance. Additionally, expect Red Flag warning conditions for the next 48 hours. Situational awareness needs to be constantly reevaluated and plan for rapid rates of spread, erratic winds, lightning and increase in flame lengths.

Thunderstorm Safety

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail, and lightning occur only in the mature stage of a thunderstorm.

Situation Awareness

Observe the 30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions identified below. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

Hazard Control

- Take shelter in a vehicle or building if possible.
- If outdoors, find a low spot away from tall trees, wire fences, utility lines and other elevated conductive objects. Make sure the place you pick is not subject to flooding.
- If in the woods, move to an area with shorter trees.
- If only isolated trees are nearby, keep your distance twice the tree height.
- If in open country, crouch low, with feet together, minimizing contact with the ground. You can use a pack to sit on, but never lay on the ground.
- If you feel your skin tingle or your hair stand on end, immediately crouch low to the ground. Make yourself the smallest possible target and minimize your contact with the ground.
- Don't group together.
- Don't stay on ridge tops, in wide open areas, or near ledges or rock outcroppings.
- Don't operate landline telephones, machinery, or electric motors.
- Don't handle flammable materials in open containers or metal hand tools.

Lightning never strikes twice, but it only takes once!

4. UNFAMILIAR WITH WEATHER AND LOCAL FACTORS INFLUENCING FIRE BEHAVIOR

INCIDENT RISK ANALYSIS (ICS 215A)

MODOC JULY COMPLEX

DAY SHIFT

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES	
ALL	FIRE WEATHER	<ul style="list-style-type: none"> • Winds increasing or changing direction. • Weather becoming hotter and drier. • Unstable atmosphere can promote rapid fire growth. 	
ALL	THUNDERSTORMS	<ul style="list-style-type: none"> • Refer to IRPG page 21, "Thunderstorm guidelines" • Heads up for erratic winds and possible downdrafts. • Follow the 30/30 rule. 	
ALL	SPOT FIRES	<ul style="list-style-type: none"> • Size up prior to engagement. • Watch for multiple spots. • Ensure LCEs is in place. • Maintain Situational Awareness at all times. 	
ALL	DANGER TREES	<ul style="list-style-type: none"> • Follow "Hazard Tree Safety" guidelines, IRPG pages 22. • Post lookouts, or use a spotter in mop-up areas with personnel. • Don't park vehicles or take breaks in high concentrations of hazard trees. • Establish trigger points for disengagement during high wind events". 	
ALL	HEAT RELATED ILLNESS (HRI) & DEHYDRATION	<ul style="list-style-type: none"> • Drink 2 to 1 ratio of water to sports drinks. • Take frequent breaks, minimum of 10 minutes every hour. • Recognize symptoms of HEAT RELATED ILLNESS which include, Lack of energy, headaches, dizziness, lack of rest, no hunger, poor eating habits, hot skin, and lack of sweating 	
ALL	TRAFFIC & DRIVING	<ul style="list-style-type: none"> • Practice "Defensive Driving" techniques. • Use spotters when backing. • Always use headlights. • Use warning lights when working on roads or traveling in smoke. • Reduce speed when dusty, maintain adequate spacing with other vehicles. • Some roads are dead end with poor turn around, scout roads first. • Watch for livestock 	
ALL	MOP UP	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover (IRPG)). • Use all required PPE, including eye protection. • Maintain proper spacing and overhead clearance. • Be alert for stump holes and root cavities. • Minimize exposure to smoke, and rotate personnel into clean air when practical. • Evaluate unburned islands/increase situational awareness. 	
ALL	AIR OPERATIONS	<ul style="list-style-type: none"> • Follow Aviator" Watch-Out Situations" on page 44, IRPG. • Don't plan on air resources for medical transport or resupply. • Refer to page 57, IRPG for directing bucket drops. • Ensure positive communications with all air resources. 	
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50' -100' exclusion area around equipment. • Use a spotter when backing. 	
ALL	ENVIRONMENTAL HAZARDS	<ul style="list-style-type: none"> • Keep alert for wildlife, rattlesnakes, insects, and plants. Watch fooling and hand placement around rocks. • Personal hygiene is #1 when it comes to Poison Oak Prevention.

8. MEDICAL EMERGENCY PROCEDURES

LINE MEDICAL EMERGENCY:

Crew Supervisor contact Division Supervisor/Operations with patient complaint, condition and location.

Division Supervisor/Operations contacts Communication:

- Division Supervisor/Operations to use "Injury or Incident communication protocol" on next page
 - Division Supervisor/Operations will run medical emergency on command channel
 - Communications will contact the Medical Unit Leader on Command channel.
- Medical Unit Leader will:
1. Have communications dispatch ground/air transport resources
 2. Notify receiving hospital of injury status.
 3. Develop primary and contingency transport plan
 4. Notify Incident Commander, Safety, Logistics and Operations

CAMP MEDICAL EMERGENCY:

Contact Communications with patient complaint/condition and location, via LOGs Net

- Medical Unit contacts:
 - Safety
 - Logistics
 - Operations
- Medical Unit Leader will:
 1. Contact Communications to dispatch ground/air transport resources
 2. Notify receiving hospital of injury status
 3. Develop primary and contingency transport plan

Situation _____

Any special equipment required _____

Number of injured _____ Type of injuries _____

Closest pick up point (DP, Helispot) _____

Level of consciousness _____ Resp. _____ Pulse _ BP _____ Weight. _____
 (alert & oriented x 1-4)

Injury _____ Agency (No Names) _____

Medical History/Allergies _____

Air Transportation Triage

	<i>Ground or Air Ambulance to Hosp.</i>	<i>Transport to Med Unit</i>
<i>Mechanism</i>	<i>Hit by a falling tree or large branch Fall of 10' or more Insect bite with shortness of breath Signs of heat stroke (hot, dry, disoriented) Burn Injury greater than 1% body area</i>	<i>Minor dehydration Cut or laceration with bleeding controlled Minor bites and Stings Minor burns</i>
<i>Area Injured</i>	<i>Significant Blunt or Penetrating Trauma to Head, Neck, Chest, Abdomen or pelvis Any Arm or Leg fracture above the Joint</i>	<i>Minor blunt trauma Minor penetrating trauma Extremity sprains and strains Simple fracture below elbow or knee</i>
<i>Symptoms</i>	<i>Disoriented Chest Pain <u>or</u> Shortness of Breath Weak or absent radial pulse Pale, cold and sweating</i>	<i>Alert and oriented No shortness of breath Good pulses</i>

If air or ground ambulance is DELAYED:

Package and transport patient to rendezvous with ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response.

The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.

FIRE SUPPRESSION REPAIR PLAN

Guidelines for dozer lines, hand lines, helispots, spike camps, drop points, water sources and safety zones:

Note: Where there is more rock than soil on control lines with slopes 5% or greater, waterbars are not needed as long as the non burnable debris on the line will dissipate the water enough to prevent channeling.

Stage 1) Soil and rocks will be put back on control lines and spread. Waterbarring will be completed where appropriate. No burnable material will be placed on the direct control lines.

Stage 2) In addition to stage 1 burnable material/debris will be placed on the lines and spread. Pull slash and downed trees over dozer line to reduce erosion and prevent unauthorized vehicular use.

Contingency line will be repaired as stage 2.

Obliterate any berms from the outside edge of existing fireline. Work material back onto the line. Do not sidecast berm material into or near stream channels.

Restore Forest roads to pre-fire suppression activities. Blade and grade travelway, remove berms, clean ditches and culvert inlets, chip roadside slash.

Repair fences damaged resulting from fire suppression activities.

Remove all improvised dams from drainages created for pumps and drafting. Area should be returned to pre fire suppression activities.

Water bars should be constructed at least 30 degrees perpendicular to the fireline. Make sure waterbars outlets are open.

Dozer/Hand line (% slope)	Maximum Distance Apart (feet)	
1 – 5	200	Waterbars should be no further apart than this. When in doubt, put in more. Use only excavators for this work. Make sure waterbars outlets are open (often requires alittle shovel work).
6 – 20	125	
21 – 40	60	
41 – 60	40	
>60	25	

Watercourses:
All slash, soil, and debris deposited into watercourses resulting from fire suppression activities shall be removed and stabilized.

Concentrations of Green Timber
Areas that have concentrations of fallen or pushed over trees (not juniper) will need to be addressed. Trees over 10" DBH should have the root wad removed at the base and the tree placed with others in an organized fashion. All of the butts of the trees even, stacked on top of each other so that there 4-6 trees in a bundle. If possible the bundles will be parallel to the road and not overlapping.

Trees less than 10" DBH and root wads should be handled as slash/debris and used for covering dozer line to prevent vehicular travel and reduce erosion.

STANDARD OPERATING PROCEDURES—FINANCE SECTION
16 HOURS IS NOT A GUARANTEE - IT IS HOURS WORKED!!

WORK REST CYCLE

IT IS NATIONAL DIRECTION TO MEET 2 TO 1 WORK/REST RATIO (1 hour of sleep/rest for every 2 hours of work). Every effort shall be made to manage work hours so you don't exceed the maximum of 16 hrs. Work hours exceeding 16 hours shall be approved by your supervisor in advance, and a justification/mitigation form completed for review by Section Chief & approved by IC. It is each person's responsibility to comply with this direction to manage for fatigue and safety.

OPERATIONAL SHIFTS

Pay status for assigned overhead and crews on the fireline will not start prior to the posted briefing time and will terminate on arrival back in camp (except for debriefing—additional hours may be accrued by those required to attend debriefing). Supervisors will be allowed ½ hour prior to briefing and after return to camp to ready crew and equipment.

DUTY STATUS

Division/Group supervisors and Unit Leaders are responsible for establishing on and off duty status. The objective is a 2 to 1 work/rest ratio. Personnel will normally work, travel, and/or be placed on ORDERED standby 8 to 16 hours per day and be off duty 8 hours or more (breaks count towards 8 hrs). Off duty time will be in a non-pay status. Each federal employee is guaranteed **at least 8 hours** of pay status each 24-hour period (midnight to midnight) unless it is the first or last day of an assignment or stated otherwise in a contract or agreement.

PERSONNEL/EQUIPMENT TIME REPORTING

Personnel time will be reported to the Time Unit and daily once they are signed by the next level supervisor. OES resources will be monitored by OES Agency Rep (if assigned) for 2/1 Work Rest compliance. Situations entitling you to HAZARD PAY are to be noted in remarks (ie. HP=Uncontrolled Fireline, hovering hookups, low level flights, etc.)

Private Contracted Equipment time must be tracked on a Shift Ticket daily and hours on shift noted even if it is a daily rate. When swapping out operators you need to notify Finance as well as changing from single to double shift and vice versa.

Supervisor's - If you are responsible for daily tracking of equipment or personnel, please ensure you understand the agreement, and follow the rules provided in this document. Do not sign documents for resources you did not manage unless you have knowledge of their assignment hours.

MEAL AND OTHER WORK BREAKS

Compensable meal periods are the exception, not the rule (5 CFR 551.411 © and 29 CFR 785.19(a)). Until the fire is controlled, personnel on the fireline MAY BE compensated for meal periods if all of the following conditions are met: 1) The fire is not controlled and 2) The Operations Section Chief makes a decision that it is critical to the effort of controlling the fire that personnel remain at their post of duty and continue to work as they eat, and 3) The compensable meal break is approved by the supervisor at the next level and documented on CTR. For personnel in support positions, and fireline personnel after control of a fire, a meal period of at least 30 minutes must be ordered and taken for each work shift of eight hours or more. In those situations where personnel cannot be relieved from work and must remain at a post of duty, a meal period may be counted as time worked, which will be compensable. If breaks are NOT able to be taken, CTR should have a statement in remarks explaining the situation. Kitchen closes at 2200 so show dinner break unless you went off clock by 2130.

“Individual commitment to a group effort--that is what makes a team work, a company work, a society work, a civilization work.” --Vince Lombardi

Smoke Exposure for Wildland Firefighters

Inhalation of smoke is a safety concern that can potentially impair your performance and cause short and long term health impacts.

Current Research on Smoke Exposure

The US Forest Service Missoula Technology Development Center is currently conducting a smoke exposure assessment study. Data is currently being collected to determine the levels of carbon monoxide and PM₄ that wildland firefighters are being exposed to on prescribed and wildfires all over the US. This information will be used to better understand the health risks associated exposure to smoke on firelines.

What is in Smoke? What can happen from short-term exposures?

Carbon Monoxide (CO) –

- Higher concentration in closer proximities to the combustion source
- Moderate exposure can lead to shortness of breath and headaches
- High levels of CO can lead to headaches, confusion, and a person collapsing on exertion
- You can recover from short-term exposures

Particulate Matter (PM₄) –

- Particles that are small and can be inhaled deep in the lungs
- Deposits into the respiratory tract
- Can carry other chemicals into the body
- Short-term exposure can suppress the immune system and cause airway distress and irritation that can lead to shortness of breath, coughing and a sore throat

Long-Term Health Impacts

Potential Health Impacts (not studied in wildland firefighters) –

- Chronic respiratory diseases (COPD, Bronchitis, Emphysema)
- Heart disease
- Cancer

Wildland Firefighters –

- Research study found significant associations between the greater number of years worked as a wildland firefighter and heart arrhythmia, hypertension and having had knee surgery

Reducing Exposure to Smoke - Mitigation Strategies

- Mop-up – when conditions allow, mop-up only enough to secure line (50ft vs. 300 ft)
- Holding – if possible rotate crews or individuals in and out of areas with higher smoke exposure
