## OPERATIONAL PERIOD

MONDAY, JULY 31, 2017

0600-1800 HOURS

## INCIDENT OBJECTIVES (ICS 202)

<b>1. Incident Name:</b>	<b>2. Operational Period: DAY</b>	
MODOC JULY COMPLEX	Date/Time From: 07/31/2017 0600      MON	Date/Time To: 07/31/2017 1800      MON
<b>3. Objective(s):</b>		
<u>Objectives:</u>		
<ul style="list-style-type: none"> <li>• Ensure that strategies and tactics provide for firefighter and public safety through the application of sound risk management principles.</li> <li>• Establish and strengthen cooperators, partners, and stakeholder relationships.</li> <li>• Minimize the threat to critical infrastructure and private timberland's.</li> <li>• Work closely with assigned Resource Advisors to minimize suppression impacts on sensitive cultural areas.</li> <li>• Provide Initial Attack response for area within perimeter of Modoc July Complex.</li> </ul>		
<b>4. Operational Period Command Emphasis:</b>		
<u>Primary:</u>		
Using a full suppression strategy, minimize the size of the fires through the use of direct attack where safe to do so.		
<u>Alternate:</u>		
When not feasible or safe to go direct use indirect attack to still minimize fire size.		
<u>Contingency:</u>		
Use indirect attack tactics at major roads and natural barriers to suppress fire and minimize firefighter exposure to extreme fire behavior.		
<u>Emergency:</u>		
Withdraw fire personnel to safety zones or ICP and ensure accountability for all personnel.		
<b>General Situational Awareness:</b>		
<ul style="list-style-type: none"> <li>• Heads up for winds, lower relative humidities, and higher temperatures.</li> <li>• Use caution while driving near the shoulders of unimproved roads.</li> <li>• Headlights on whenever driving on dirt or gravel roads.</li> </ul>

## Modoc July Complex Fire Weather Forecast

FORECAST NO: 8

NAME OF FIRE: Modoc July Complex

PREDICTION FOR: 0600-1800 Day shift

UNIT: CA-MDF

SHIFT DATE: 7/31/17

SIGNED: 

TIME AND DATE

Incident Meteorologist: Ryan Walbrun-IMET

FORECAST ISSUED: 2200 hours on 7/30

---

*...Hot dry and unstable with Haines 5 this afternoon...*

**WEATHER DISCUSSION:** The main weather change today is expected to be abundant smoke from all the fires across the region. This will locally act to stabilize things at least through early afternoon. The beginning of a significant heat event will get underway today with highs into the 90s and minimum humidity around 10%. The strong high pressure bringing the heat will mean generally light winds over the complex area with even the usual afternoon diurnal winds lighter than normal. Winds will start the day light northerly, then switch to southerly midday before more typical late day southwest winds develop. Haines 5 conditions continue aloft so any timber runs may be strong enough to punch through the inversion layer with some late day plume dominated fire behavior possible. Cumulus build-ups are forecast to stay to the south and east of our complex.

---

**WEATHER FORECAST for Today:**

**WEATHER:** Widespread smoke. Otherwise mostly sunny, hot and dry.

**HIGH TEMPERATURES:** 89 smoke/shaded areas to 96 full sunshine. 1-3 degrees warmer.

**HUMIDITY:** Afternoon minimum 9-15%. Little change.

**20 FT WINDS:**

**RIDGETOP** - North/Northeast 3-6 mph til 10 am then light southerly before switching to southwest 4-8 mph in the afternoon with a few late day gusts 10-12 mph.

**SLOPE/VALLEY** - Light then afternoon upslope 2-5 mph gusts 7-9 mph.

**HAINES INDEX:** 5

**STABILITY/INVERSION:** Strong inversion due to smoke and ridge, then becoming unstable after 3 pm.

---

**Monday Night:** Fire plumes and cumulus will dissipate by 8 pm. RH recovery will be poor through 11 pm then moderate recovery around 40% during the late night hours. Thermal belts in the timber around Adin Pass and Blue Mountain may see locally poorer RH recovery. Otherwise mostly clear with overnight lows 62-67. Ridge winds will become North/Northeast 5-10 mph with light downslope winds in the drainages and lower slopes.

---

**Tuesday thru Thurs:** Long awaited heat wave will be over the region with near record heat. Daytime highs well into the 90s with overnight lows in the 60s. The strong ridge will mean general winds will be light with typical afternoon winds from the west and a few late day gusts to 15 mph. Thunderstorm chances look very remote through midweek but still a 5-10% for a late day rogue thunderstorm given the Complex currently covers over 1 million square miles. Thunderstorm chances increase significantly by Thursday and Friday.

---

**SAFETY INFORMATION:** The most dangerous weather conditions you may face the next few days may simply be due to exposure to extreme heat and smoke. Take the simple action of hydrating yourself to avoid dehydration or heat related illnesses.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 010	<b>TYPE OF FIRE:</b> Wildfire Full Suppression
<b>FIRE NAME:</b> Modoc July Complex	<b>OPERATIONAL PERIOD:</b> July 31, 2017 0600 – 1800 Day Shift
<b>DATE ISSUED:</b> July 29, 2017	<b>TIME ISSUED:</b> 2100
<b>UNIT:</b> Modoc National Forest	<b>SIGNED:</b>  Teresa Riesenhuber, FBAN

### INPUTS

**WEATHER SUMMARY:** --See Fire Weather Forecast for more details --  
Hot, dry and unstable with Haines 5 in afternoon. Widespread smoke, otherwise mostly sunny.  
High Temperatures 89-96°F. Minimum humidity 9-15%. Winds: SW 4-8mph, gusts 10-12mph. Haines Index: 5

**FUELS:** Mixed Conifer Timber with light to moderate understory of brush, logs, and smaller conifers; and various combinations of Sage/Grass/Juniper. All live fuel moistures are at average for this time of year and new growth is complete.  
Fuel Moistures: Sage 100% 1hr fuels 3-5% 10hr fuels 4-8% 1000hr fuels 8%

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL: Persistent Unstable, Hot, Dry Conditions

The primary carrier of fire is the brush and abundant dead fuels in all size classes. When the dead fuels burn, they pre-heat and dry out the live and ladder fuels. Fine dead fuels will rapidly react to wind shifts and are extremely receptive to spotting. Although there is fire history in the area the grass and shrub fuel types regrow quickly, therefore old fire scars cannot be relied upon to hold or slow fires or provide safety zones. Pyro-Cumulus development could occur again today but is less likely. Expect active fire behavior even without advanced column development.

**Probability of Ignition** = 80 – 90% **Spotting Distance**= up to 1/2 mi. **BI 54 ERC 79**  
**Rate of Spread** Head fire 4 - 120 ch/h with flame lengths 2 -12 ft Backing fire <6 ch/h with flame lengths < 3 ft

#### SPECIFIC

Mixed Conifer Timber: During the heat of the day, expect moderate to high rates of spread (3-50 ch/h) and high flame lengths. Group torching under the influence of gusty winds is likely to occur especially where ladder fuels are abundant. In areas with heavy dead and down, expect complete consumption and weakening of trees and root structures. Heavy dead fuels will contribute to preheating of the ladder fuels causing passive and active crown fire activity.

Brush/Grass/Pinyon: Early in the day, expect fire behavior in the sage brush and grass to have low flame lengths and low rates of spread. During the heat of the day, expect high rates of spread (20-120 ch/h) and high flames lengths. High mortality in brush, needle draped brush, and grass growing right up under the brush will contribute to increased fire behavior. This fuel type occurs frequently on ground that consists of lava and thus extremely uneven terrain. Overestimate the length of your escape routes in this fuel type.

#### AIR OPERATIONS:

Under the morning inversion, smoke is expected to be poor for air operations. During the afternoon burn period, as some mixing may occur expect smoke to hinder actions out ahead of the fire. Mixing height will vary throughout the day establishing at 2000 ft in the morning and increasing to 6000 feet in the afternoon.

### SAFETY

Today we honor those who passed before us. The Frog Fire started on July 30, 2015 just down the road and under nearly identical weather and fuel conditions as we have predicted today. Moderated conditions are still cause for concern especially in light flashy fuels and hot/dry weather conditions.

Frog Fire: RH 13, Temp 91, Wind 6 mph, BI 60, ERC 77  
Today Forecast: RH 9-15 Temp 89-96, Wind 4-8 mph, BI 54, ERC 79

# Modoc July Complex – Safety Message

INCIDENT #CA-MDF-000671

DATE: 07.31.17 TIME: 0600 – 1800 Day

## Incident Management Team Transition

- Sometimes called the 19 th Watch Out Situation.
- Take the time to understand the plan. Ensure all resources completely understand the assignment, the Communications Plan, and the Medical Plan.
- Briefings: Required every shift, for all personnel, for new assignments, and for changing conditions.

## Hazard Trees

- All trees need to be considered hazardous until they are evaluated.
- Even large healthy looking trees can be dangerous due to forest health issues.
- Use the look up, down, and all around process when working around or under trees.
- Minimize the number of personnel exposed, and the exposure time.
- Avoid unnecessary exposure around suspect trees during windy periods.
- Mitigate or close areas around hazardous trees in work areas.

## Driving

- When driving keep the speed at or below the posted speed limit and turn your headlights on. Is the posted speed limit a safe speed under the current conditions and traffic?
- **Use caution on unimproved roads as some have soft shoulders. Some roads are also only one lane with pullouts!**
- Road surfaces are variable with washboard conditions and thick gravel that can compromise turning and braking.
- Watch for and anticipate stock and wildlife.
- Always fasten your seat belt before the vehicle is set into motion. Use backseat.
- Don't tail gate, especially in dusty conditions.
- Slow down, slow down, and slow down!

**CIIMT 4 Safety Group**

## Understand your mission, ask questions!
