INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period:	DAY	
	Date/Time From:	DAT	Date/Time To:
MODOC JULY COMPLEX	08/03/2017 0600	THU	08/03/2017 1800 THU
3. Objective(s):			
Objectives:			
 Provide for the safety of all responders by utilizing nati Share critical information affecting public safety so time Reduce firefighter exposure by only engaging fire assigned Engage cooperators and stakeholders to jointly provided Utilize local resource specialists to identify and protect Maintain and enhance community, County, State, National Identify, assess and implement suppression repair need Manage incident costs effectively for the values at risk 	ely decisions and actions gnments with the highest e for the defense of comr sensitive sites and cultur onal Forest and stakehold ds, where appropriate in	can be implemented. probability of success. nunities, infrastructure al resource values by der relationships throug coordination with the F	and economic interests. minimizing impacts from suppression operations. gh accurate and timely dissemination of information.
4. Operational Period Command Emphasis:	10-50		V49.
Primary:			
Using a full suppression strategy, minimize the size of the fir	es through the use of dire	ect attack where safe to	o do so.
Alternate:			
When not feasable or safe to go direct, use indirect attack to	minimize fire size.		
Contingency:	(a)		
Use indirect attack tactics at major roads and natural barrier	s to suppress fire and min	nimize firefighter expos	sure to extreme fire behavior.
Emergency:			
Withdraw fire personnel to safety zones or ICP and ensure a	accountability for all perso	nnel.	
General Situational Awareness:		20	
 Heads up for fire weather and fire behavior and ext Use caution while driving on all incident roads. Heads up for wildlife and cattle. Continue hydration efforts. 	treme fire conditions.		
5. Site Safety Plan Required? Yes No X

Modoc July Complex Fire Weather Forecast

FORECAST NO: 14

PREDICTION FOR: 0600-1800 Day shift

SHIFT DATE: 8/3/17

TIME AND DATE

FORECAST ISSUED: 2200 hours on 8/2

NAME OF FIRE: Modoc July Complex

UNIT: CA-MDF

SIGNED:

Incident Meteorologist: Ryan Walbrun-IMET

...Hot and dry with continued Haines 5...
...Fire Weather Watch in effect Friday for West winds and low humidity...

<u>WEATHER DISCUSSION:</u> Day to day changes in the weather look subtle so we should expect another active day on the fire. Conditions will start out warm and dry once again. Winds will be light in the morning with smoky skies to start the day. Afternoon winds will become westerly again and be adverse to the line in Branch II. Winds will be west to northwest on the Cove Fire today as well but generally light. Haines 5 conditions are forecast again and given the recent track record there is no reason to not expect plume dominated late day pyro-cumulus should the fire make interior timber runs. Transport winds will be westerly and increasing in speed aloft, so spotting distances may be slightly longer. Finally, nearby thunderstorms will have the possibility to push outflow boundaries across both fires but especially the Steele fire which is more exposed in flat land. At shift change the last two nights the Cove Fire has produced lightning with collapsing columns so stay vigilant through your entire shift.

WEATHER FORECAST for Today:

WEATHER: Widespread smoke otherwise sunny then afternoon cumulus build ups. Hot and dry.

HIGH TEMPERATURES: 88-93 smoke shaded areas. 94-99 full sunshine. Little change.

HUMIDITY: Afternoon minimum 9-15%...locally 18% under heavy smoke. Little change.

20 FT WINDS:

Steele Fire - Northeast 3-6 mph early becoming West 5-10 mph in the afternoon. Some late afternoon gusts 15-18 mph most likely in Branch II Div I/K.

Cove Fire - Light winds becoming Westerly 4-8 mph gusts 10-12 mph in the afternoon.

SLOPE/VALLEY - Light then afternoon upslope 2-5 mph gusts 7-9 mph. Lighter in shaded areas.

HAINES INDEX: 5 STABILITY/INVERSION: Strong morning inversion becoming unstable after 1 pm.

Thursday Night: Fire plumes and cumulus will dissipate by 8 pm. RH recovery will be poor through 11 pm then some recovery to around 25-35% during the late night hours. Thermal belts in the timber around Adin Pass locally poorer RH recovery. Otherwise mostly clear with overnight lows 68-73. Northwest winds 5-10 mph evening gusts 15 mph with light downslope winds in the lower slopes.

<u>Friday thru Sunday:</u> Fire Weather Watch on Friday for low humidity and gusty west wind gusts to 25 mph over the Steele Fire but lighter Cove. Thunderstorm chances increase Friday afternoon and could linger into the night. Seasonably hot Saturday and Sunday with highs around 90 but with increasing chances of afternoon thunderstorms. One change should be better humidity recovery by the weekend, around 50%.

SAFETY INFORMATION: Don't get complacent with plume dominated fire behavior. The Cove Fire has generated lightning the last two days. Thanks for the great safety record. Fall back to the basics and make sure someone has eyes on the fire column.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 016	TYPE OF FIRE: Wildfire Full Suppression						
FIRE NAME: Modoc July Complex	OPERATIONAL PERIOD: Aug 3, 2017 Day Shift						
DATE ISSUED: August 2, 2017	TIME ISSUED: 1200						
UNIT: Modoc National Forest	SIGNED: Jan Rada Teresa Riesenhuber, FBAN						

INPUTS

WEATHER SUMMARY: -- See Fire Weather Forecast for more details --

Haines Index: 5

High Temperatures Szone 90-95°F; Nzone 95-100°F Minimum humidity 9-15%. Winds: W-NW 5-10 mph gusts 12-15

FUELS: Mixed Conifer Timber with light to very heavy understory of grass, brush, logs, and smaller conifers; and various combinations of Sage/Grass/Juniper. All live fuel moistures are at average for this time of year; new growth is complete and live fuels are trending toward dormancy. Fuel Moistures: Sage 90% 1hr fuels 3% 10hr fuels 3% 1000hr fuels 7%

OUTPUTS

FIRE BEHAVIOR

GENERAL: Extreme Fire Behavior due to persistent unstable atmosphere, record breaking heat, and extremely dry conditions. Atmospheric conditions are set up to produce Pyro-Cumulus again today. Expect very active to extreme fire behavior even without advanced column development. The primary carrier of fire is the brush, grass, and abundant dead fuels in all size classes. The fuelbeds are highly receptive to spotting. Although there is fire history in the area the grass and shrub fuel types regrow quickly, therefore old fire scars cannot be relied upon to hold or slow fires or provide safety zones.

Probability of Ignition = 90-100% Spotting Distance= up to 1/2 mi. from today's fire behavior BI TBD ERC TBD Rate of Spread Head fire 8-200 ch/h with flames 3-15 ft Backing fire < 10 ch/h with flame lengths < 4 ft

SPECIFIC: Expect Extreme Fire Behavior All Day, All Areas, and Plan Accordingly.

<u>North Zone:</u> Watch for sleeper heat becoming active and launching embers across the fireline. The lava rock combined with grass/brush/juniper fuel type can hold heat for days and with a little sunshine and wind, will get up and run again. Recommend lengthening your escape time due to the difficult lava rock terrain and plan for slop-overs or spots.

<u>South Zone and Cove Fire:</u> All areas of the Cove fire and surrounding areas have potential to experience extreme fire behavior again. Plan for the plume dominated fire behavior and downdrafts near the end of shift. This fire is primarily fuels and terrain driven through the burn period until the Plume takes over the immediate atmosphere causing more extreme fire behavior. Should the fire make it to Hwy 299, the Narrows has a high probability for fire spotting across.

<u>Brush, Grass, Pinyon:</u> During the heat of the day, expect rapid rates of spread (40-200 ch/h) and flame lengths 5-15 ft. High mortality in brush, needle draped brush, and grass growing right up under the brush will increase fire behavior. When juniper torches, it launches a bunch of embers as far as the wind will carry it. High winds, farther away the spots.

<u>Mixed Conifer Timber:</u> During the heat of the day, expect moderate to rapid rates of spread (5-50 ch/h) and flame lengths 2-10 ft. Single tree and group tree torching are likely even with low wind speeds, and especially where ladder fuels are abundant. In areas with heavy dead and down, expect complete consumption and weakening of trees and root structures.

AIR OPERATIONS:

Inversion may hinder visibility during morning hours. Hazy air all day.

SAFETY

All week there has been a downslope push with an uptick in fire behavior beginning around 1700-1800 hours and lasting into the night. This uptick in fire behavior could be attributed to column collapse each night. Some evenings the effects are slight. Last night was the most extreme column collapse we've experienced in the life of this Complex. Expect this to occur again each night there is significant smoke production especially the Plum-dominated column. Prepare for the worst. Maintain situational awareness, set trigger actions for your plan, and make them known.

Modoc July Complex - Safety Message

INCIDENT #CA-MDF-000671

DATE: 08-03-17 TIME: 0600 - 1800 Day

Presently we are under a weather watch for excessive heat, with a fire weather watch on Friday.

Watch out for;

- Winds increasing or changing directions.
- Continued record high temperatures and low humidity.
- Spot and slop fire could easily become explosive!!!

AND CONTINUE TO HYDRATE!!! HYDRATE!!! HYDRATE!!!!

Safety Around Heavy Equipment Operations

- Never assume that the operator can see you, especially at night.
- Ensure that communications are established with the operator.
- Use hand signals if other communications are unavailable.
- Maintain a 50' to 100' exclusion area around equipment.
- · Use a spotter when backing.

Air Operations

- Follow aviation watch out situations on page 44 of the IRPG.
- Don't plan on air resources for medical transport or resupply.
- Refer to page 57 of the IRPG for properly directing bucket drops.
- Ensure positive communications with all air resources.
- Look for flying objects and debris from nearby retardant and water drops.
- Be sure to always monitor the air to ground frequency so that you are not caught off guard.

CIIMT 4 Safety Group

Safety zones and escape routes... know where they are *before* you need them!!

3. SAFETY ZONES AND ESCAPE ROUTES NOT IDENTIFIED

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	FIRE WEATHER	 Winds increasing or changing direction. Weather becoming hotter and drier. Unstable atmosphere can promote rapid fire growth.
ALL	DANGER TREES	 Follow "Hazard Tree Safety" guidelines, IRPG pages 22. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events".
ALL	TRAFFIC & DRIVING	 Practice "Defensive Driving" techniques. Use spotters when backing. Always use headlights. Use warning lights when working on roads or traveling in smoke Reduce speed when dusty, maintain adequate spacing with other vehicles. Some roads are dead end with poor turn around, scout roads first. Watch for livestock
ALL	HEAT RELATED ILLNESS (HRI) & DEHYDRATION	 Drink 2 to 1 ratio of water to sports drinks. Take frequent breaks, minimum of 10 minutes every hour. Recognize symptoms of HEAT RELATED ILLNESS which include; Lack of energy, headaches, dizziness, lack of rest, no hunger, poor eating habits, hot skin, and lack of sweating
ALL	SPOT FIRES	 Size up prior to engagement. Watch for multiple spots. Ensure LCES is in place. Maintain Situational Awareness at all times.
ALL	MOP UP	 Conduct thorough briefing for all personnel (inside rear cover IRPG). Use all required PPE, including eye protection. Maintain proper spacing and overhead clearance. Be alert for stump holes and root cavities. Minimize exposure to smoke, and rotate personnel into clean air when practical. Evaluate unburned islands/Increase situational awareness.
ALL	AIR OPERATIONS	Follow " Aviation" Watch-Out Situations" on page 44, IRPG. Don't plan on air resources for medical transport or resupply. Refer to page 57, IRPG for directing bucket drops. Ensure positive communication with all air resources.
ALL	HEAVY EQUIPMENT OPERATIONS	 Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment. Use a spotter when backing.
ALL	ENVIRONMENTAL HAZARDS	 Keep alert for wildlife, rattlesnakes, insects, and plants. Watch footing and hand placement around rocks. Personal hygiene is #1 when it comes to Poison Oak Prevention.
COVE	MARIJUANA PLANTATIONS	 Maintain situational awareness. Watch for open areas and signs of improvements or irrigation systems. Be aware of evidence that cultivation has occurred in the area. If you stumble upon an area with probable cultivation, be extremely cautious, exit on the same route you arrived and notify your supervisor immediately

8. MEDICAL EMERGENCY PROCEDURES

LINE MEDICAL EMERGENCY:

Crew Supervisor contact Division Supervisor/Operations with patient complaint, condition and location.

Division Supervisor/Operations contacts Communication:

- Division Supervisor/Operations to use "injury or incident communication protocol" on next page
- Division Supervisor/Operations will run medical emergency on command channel
- Communications will contact the Medical Unit Leader on Command channel.
- Medical Unit Leader will:
 - 1. Have communications dispatch ground/air transport resources
 - 2. Notify receiving hospital of injury status.
 - 3. Develop primary and contingency transport plan
 - 4. Notify Incident Commander, Safety, Logistics and Operations

CAMP MEDICAL EMERGENCY:

Contact Communications with patient complaint/condition and location, via LOGs Net

- Medical Unit contacts:
 - Safety
 - Logistics
 - Operations
- Medical Unit Leader will:
 - 1. Contact Communications to dispatch ground/air transport resources
 - 2. Notify receiving hospital of injury status
 - Develop primary and contingency transport plan

Air Transportation Triage

	Ground or Air Ambulance to Hosp.	Transport to Med Unit
Mechanism	Hit by a falling tree or large branch	Minor dehydration
	Fall of 10' or more	Cut or laceration with bleeding controlled
	Insect bite with shortness of breath	Minor bites and Stings
	Signs of heat stroke (hot, dry, disoriented)	Minor burns
	Burn Injury greater than 1% body area	
Area Injured	Significant Blunt or Penetrating Trauma to	Minor blunt trauma
	Head, Neck, Chest, Abdomen or pelvis	Minor penetrating trauma
	Any Arm or Leg fracture above the Joint	Extremity sprains and strains
		Simple fracture below elbow or knee
Symptoms	Disoriented	Alert and oriented
- J	Chest Pain or Shortness of Breath	No shortness of breath
	Weak or absent radial pulse	Good pulses
	Pale, cold and sweating	

If air or ground ambulance is DELAYED:

Package and transport patient to rendezvous with ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response.

The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.

STANDARD OPERATING PROCEDURES—FINANCE SECTION 16 HOURS IS NOT A GUARANTEE – IT IS HOURS WORKED!!

WORK REST CYCLE

IT IS NATIONAL DIRECTION TO MEET 2 TO 1 WORK/REST RATIO (1 hour of sleep/rest for every 2 hours of work). Every effort shall be made to manage work hours so you don't exceed the maximum of 16 hrs. Work hours exceeding 16 hours shall be approved by your supervisor in advance, and a justification/mitigation form completed for review by Section Chief & approved by IC. It is each person's responsibility to comply with this direction to manage for fatigue and safety.

OPERATIONAL SHIFTS

Pay status for assigned overhead and crews on the fireline will not start prior to the posted briefing time and will terminate on arrival back in camp (except for debriefing—additional hours may be accrued by those required to attend debriefing). Supervisors will be allowed ½ hour prior to briefing and after return to camp to ready crew and equipment.

DUTY STATUS

Division/Group supervisors and Unit Leaders are responsible for establishing on and off duty status. The objective is a 2 to 1 work/rest ratio. Personnel will normally work, travel, <u>and/or</u> be placed on ORDERED standby 8 to 16 hours per day and be off duty 8 hours or more (breaks count towards 8 hrs). Off duty time will be in a non-pay status. Each federal employee is guaranteed **at least 8 hours** of pay status each 24-hour period (midnight to midnight) unless it is the first or last day of an assignment or stated otherwise in a contract or agreement.

PERSONNEL/EQUIPMENT TIME REPORTING

<u>Personnel time</u> will be reported to the Time Unit and daily once they are signed by the next level supervisor. OES resources will be monitored by OES Agency Rep (if assigned) for 2/1 Work Rest compliance. Situations entitling you to HAZARD PAY are to be noted in remarks (ie. HP=Uncontrolled Fireline, hovering hookups, low level flights, etc.)

<u>Private Contracted Equipment time</u> must be tracked on a Shift Ticket daily and hours on shift noted even if it is a daily rate. When swapping out operators you need to notify Finance as well as changing from single to double shift and vice versa.

Supervisor's - If you are responsible for daily tracking of equipment or personnel, please ensure you understand the agreement, and follow the rules provided in this document. Do not sign documents for resources you did not manage unless you have knowledge of their assignment hours.

MEAL AND OTHER WORK BREAKS

Compensable meal periods are the exception, not the rule (5 CFR 551.411 © and 29 CFR 785.19(a)). Until the fire is controlled, personnel on the fireline MAY BE compensated for meal periods if all of the following conditions are met: 1) The fire is not controlled and 2) The Operations Section Chief makes a decision that it is critical to the effort of controlling the fire that personnel remain at their post of duty and continue to work as they eat, and 3) The compensable meal break is approved by the supervisor at the next level and documented on CTR. For personnel in support positions, and fireline personnel after control of a fire, a meal period of at least 30 minutes must be ordered and taken for each work shift of eight hours or more. In those situations where personnel cannot be relieved from work and must remain at a post of duty, a meal period may be counted as time worked, which will be compensable. If breaks are NOT able to be taken, CTR should have a statement in remarks explaining the situation. Kitchen closes at 2200 so show dinner break unless you went off clock by 2130.

Human Resource Specialists

Don't let little things build into big things

You have all been asked to work very hard under difficult situations and it has been stressful. When this happens we often become more irritable than usual and say something or do something that we later regret. Help keep your team strong by managing the little problem before it becomes a big problem. Check the person to your left and right.

Dana Simpson

Smoke Exposure for Wildland Firefighters

Inhalation of smoke is a safety concern that can potentially impair your performance and cause short and long term health impacts.

Current Research on Smoke Exposure

The US Forest Service Missoula Technology Development Center is currently conducting a smoke exposure assessment study. Data is currently being collected to determine the levels of carbon monoxide and PM4 that wildland firefighters are being exposed to on prescribed and wildfires all over the US. This information will be used to better understand the health risks associated exposure to smoke on firelines.

What is in Smoke? What can happen from short-term exposures?

Carbon Monoxide (CO) –

- Higher concentration in closer proximities to the combustion source
- Moderate exposure can lead to shortness of breath and headaches
- High levels of CO can lead to headaches, confusion, and a person collapsing on exertion
- You can recover from short-term exposures

Particulate Matter (PM₄) –

- Particles that are small and can be inhaled deep in the lungs
- Deposits into the respiratory tract
- Can carry other chemicals into the body
- Short-term exposure can suppress the immune system and cause airway distress and irritation that can lead to shortness of breath, coughing and a sore throat

Long-Term Health Impacts

Potential Heath Impacts (not studied in wildland firefighters) -

- Chronic respiratory diseases (COPD, Bronchitis, Emphysema)
- Heart disease
- Cancer

Wildland Firefighters –

 Research study found significant associations between the greater number of years worked as a wildland firefighter and heart arrhythmia, hypertension and having had knee surgery

Reducing Exposure to Smoke - Mitigation Strategies

- Mop-up when conditions allow, mop-up only enough to secure line (50ft vs. 300 ft)
- Holding if possible rotate crews or individuals in and out of areas with higher smoke exposure
