WEATHER DISCUSSION: ...SCATTERED SHOWERS AND THUNDERSTORMS...

Low pressure system off the California Coast will continue to bring monsoonal moisture into the region, with increasing clouds and chances for showers and thunderstorms. Temperatures will remain slightly below normal with humidity at higher than typical levels for this area. A Red Flag Warning is in effect for abundant lightning, but storms will be mostly wet. Thunderstorm outflow winds up to 35 mph may be possible in the afternoon and evening today. This wet showery pattern will remain over the region through at least Tuesday, possibly Wednesday as the low pressure hangs over Northern California.

WEATHER SUMMARY: ****See attached Fire Weather Forecast****

...RED FLAG WARNING IN EFFECT TODAY FOR ABUNDANT LIGHTNING ON DRY FUELS...

Discussion: Continued dry conditions. Scattered thunderstorms are expected in the fire area.

Weather: Mostly cloudy. Scattered showers and thunderstorms in the afternoon.

Max Temp: 78 - 84°

Min RH: 25 - 30%

Winds (20 foot): upslope 3-5 mph on lower to mid slopes becoming W-SW 8-12, gusts to 20 in the afternoon. Ridge winds S 5-10 in the morning, becoming W 10-15, gusts to 25 in the afternoon. Gusty and erratic winds near thunderstorms in the afternoon.

FIRE BEHAVIOR

GENERAL

Warm temperatures and low relative humidity, coupled with the potential for strong outflow winds, may result in periods of extreme fire behavior and fire growth.

Energy Release Components are at average values for this time of year and a bit below the 90th percentile.

Live fuel moistures are running around 100% in sagebrush as measured at several local sampling sites.

SPECIFIC FIRE BEHAVIOR

Expect the fire behavior to be low to moderate until early afternoon. Fire spread will be primarily backing and flanking with some upslope movement during the early portion of the operational period.

Timber fuel types: potential worst-case surface fire spread will be 5-10 chains/hour with flame length 4-6 feet. Occasional torching trees and short duration crown runs should be expected which will increase spread distances and lofting of embers. Spotting distance will be up to 2/10 of a mile. Probability of ignition will be 50-60%. ***During any outflow wind occurrence, expect rate of spread 15-20 chains/hour with flame length to 10 feet and a potential for sustained crown runs.***

Grass/sage types: potential worst-case surface fire spread will be 20-40 chains/hour with flame length 6-10 feet. Spotting could increase total spread distance significantly. Anticipate spotting distances up to 2/10 of a mile. Probability of ignition at the peak of the burning period will be 60-70%. ***During any outflow wind occurrence, rate of spread could exceed 120 chains/hour with flame length to 15-20 feet.***

AIR OPERATIONS

Air operations may be limited early morning due to poor visibility caused by smoke.

Sunrise: 06:02

Sunset: 20:12

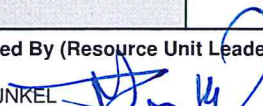

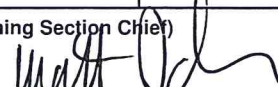

SAFETY

Some precipitation occurred over the fire area yesterday and may occur again today. Do not become complacent as some areas on the fire may have received little to no rain and could still readily burn. Keep heads up for undetected spot fires as some have been detected a significant distance from the main fire.

SAFETY MESSAGE

Stay focused on the safety aspects of your assignment

- Ensure LCES is in place prior to engagement.
- Establish decision points when conditions can deteriorate.
- Take weather observations.
- Monitor the fire environment for changes in the fuel, topographic and weather elements. Forecast the fire behavior.
- Evaluate the work area for hazards, communicate hazards, mitigate or avoid the hazards.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT HAZARD TREES THUNDERSTORMS
--	---	--

Be sure all elements of your safety plan are in place prior to engagement

Hazard Tree Safety

Inspect area for hazard trees before starting work. Are there trees that have been falling, leaning, hung up, or have broken tops? Are there high risk species? How long has the fire been burning in the area?

Identify hazards and fell or avoid the hazard and flag.

Take down hazard trees only with qualified sawyers and then only if necessary.

Decision Points

Establish Decision Point(s) when potential exists for your fire situation to degrade.

Insure that your situation awareness includes monitoring factors that relate to the Decision Point(s) you set.

Have a planned response in place.

Do not ignore a Decision Point that has been hit!
