INCIDENT Weather Forecast

FORECAST NO: 22
PREDICTION FOR: Wednesday
SHIFT DATE: 8/9/17
FORECAST ISSUED: 2000, Aug 8, 2017

NAME OF FIRE: Orleans Complex
UNIT: SRF
Incident Meteorologist: Dan Harty *DanHarty*

...Red Flag Warning in effect for Lightning...

WEATHER DISCUSSION: Conditions remain unstable with a chance for showers and thunderstorms this afternoon and evening. While storms would likely produce some rainfall, dry lightning is possible outside of the rain cores. Therefore, a Red Flag Warning is again in effect today. There is potential for a strong storm that would be capable of producing brief moderate to heavy rainfall and possibly even hail. Gusty and erratic outflow winds near any storm, otherwise winds will continue to be terrain driven with afternoon and evening gusts diminishing to generally light overnight. Little changes in relative humidity and temperatures today.

WEATHER FORECAST for WEDNESDAY:

WEATHER: Partly cloudy with a 40% chance showers and thunderstorms in the afternoon. Gusty and erratic outflow winds possible near any storm. Moderate to brief heavy rain and even hail is possible with any strong storms. Areas of smoke.
Lightning Activity Level (LAL): 3 Chance of Wetting Rain (CWR): 10%

MAX TEMPERATURES: 86-98° - East Zone 86-92 - West Zone
MIN HUMIDITY: 24-32% - East Zone 30-40% - West Zone

20 FOOT WINDS:
SLOPE/VALLEY - Calm to light winds in the morning. Becoming upslope/upvalley 4-8 mph with afternoon gusts around 15 mph, strongest along the river valley.
RIDGETOP - Northeast to east 3-7 mph in the morning, becoming light and variable by afternoon.

WEATHER FORECAST for WEDNESDAY NIGHT:

WEATHER: Partly cloudy with a 20% chance of showers and thunderstorms, mainly in the evening. Gusty and erratic outflow winds possible. Moderate to brief heavy rain and even hail is possible with any strong storms. Areas of smoke overnight.
LAL (Lightning Activity Level): 2 CWR (Chance of Wetting Rain): 5%

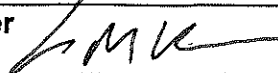

MIN TEMPERATURES: 64-69°
MAX HUMIDITY: 50-65% mid slopes and ridges. >75% valleys.

20-FOOT WINDS:
SLOPE/VALLEY - Upslope/upvalley 4-7 mph with gusts to around 15 mph in the early evening, becoming downslope/downvalley 2-5 mph.
RIDGETOP - Northeast to east 3-7 mph with gusts to around 12 mph.

OUTLOOK: Chances of thunderstorms will continue but gradually diminish through Saturday. Winds will generally be terrain influenced with afternoon breezes each day. Temperatures will show little day to day change with a slight downward trend in relative humidity.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER 21	TYPE OF FIRE: Wildland Fire
FIRE NAME: Orleans Complex	OPERATIONAL PERIOD: Day shift August 9, 2017
DATE ISSUED: August 8, 2017	TIME ISSUED: 2000
UNIT: Six Rivers NF	SIGNED: Kevin Maier FBAN (t) 

WEATHER SUMMARY: ***Please See attached Fire Weather Forecast***

Unstable conditions will bring a chance of showers, thunderstorms and lightning today. Gusty and erratic outflow winds will be possible with cell passage. Dry lightning is possible outside of rain cores. Temperatures are slightly higher and humidities lower. Winds will be terrain influenced and northeasterly over the ridges.

Today: Partly Cloudy. 30% chance of thunderstorms after noon.

Max Temp: **East Zone 86-98°** **West Zone 86-92°**

Min RH: **East Zone 24-32%** **West Zone 24-32%**

20 FT Winds:

Slope/Valley- Calm in the morning, then **upslope/upvalley 4-8 mph** after noon with **15mph** gusts.

Ridge Top- E/NE 3-7 mph in the morning, becoming light and variable by afternoon.

Ukonom Fire:

More hold over spot fires from lightning are likely as conditions dry, or inversions lift in mid-afternoon. If the inversion begins to lift and the air begins to move, terrain influenced winds have the ability to increase fire behavior. Down logs and pockets of heavy surface fuels continue to be the primary carrier for surface fire spread. When slope, aspect, and wind align surface fire runs may be possible. Occasional torching in smaller trees and pockets of dense brush are likely. Spotting has mainly occurred in the form of rollout, lofted fire brands are possible when torching occurs.

Fork Fire: Fire behavior has been generally low with minimal activity in the form of backing, creeping and flanking. Light and variable winds will lead to minimal fire growth. Occasional single tree torching could be possible in smaller trees. Spotting has mainly occurred from rollout, but lofted fire brands are possible if heavy pockets of fuel actively burn. Fire activity is likely to increase if outflow or erratic winds from thunder cell passage materialize over the fire.

Flame lengths of 5-9' and rates of spread of **8-14 ch/hr** are possible for head and flanking fire. Backing fire **flame lengths** between **1'-3'** with rates of spread of **4 ch/hr or less** are likely. **Spotting up to .2 mi** is possible. **Probability of ignition** will be between **60% and 80%** during the heat of the day.

Division A-M: Fire will continue backing down slope consuming unburned pockets of fuel. Lightning starts are possible in DIV M from evening thunderstorms.

Division F: Active fire behavior and swirly canyon winds have the potential to carry fire brands across the Klamath River from DIV A. Be vigilant of possible lightning holdovers from last night.

Division Z: Be aware of main fire below Ukonom lookout, and expect larger fire growth as temperatures increase. Be vigilant of possible spot fires which may have occurred and held over from gusty outflow winds during last two evenings.

Forks: Limited fire growth is expected in the absence of a sustained wind event. Gusty outflow winds from thunderstorm passage could provide this wind event.

Little: Backing and creeping fire will continue, little growth expected.

AIR OPERATIONS

Poor visibility will cause issues and delays for air operations again today.

SAFETY

Avoid complacency during times of light rain and low fire activity. Gusty wind events can align with steep slopes, and overwhelm periods of moisture in short bursts.

Orleans Complex - Ukonom Fire & West Zone - Incident Risk Analysis (215a)

Div.	LCES Analysis of Tactical Applications (Hazardous Actions or Conditions)	LCES Mitigations/Warnings/Remedies
F	Working along 96 corridor	Be aware of rocks/trees on Highway 96. Have your Red Lights on when parked. If working along the roadway, use caution when walking around vehicle on the traffic side. When patrolling at slow speeds, have your Hazard Flashers on.
All	Mountain Driving	Forest Road 15 (aka G-O Road) has buckling and undulations. Be aware of areas of concern (flagged and painted) Drive with caution! A vehicle going downhill must yield the right of way to the vehicle going uphill by either safely pulling over or safely backing up. You MUST drive with caution always, and expect the unexpected. Maintain good sight/reaction distance. Seatbelts ON before the wheels turn! Headlights on to be seen.
All	Thunderstorms	Thunderstorms hazards include both downbursts and lightning. For downbursts monitor fire for increased fire behavior. For lightning, wide open spaces are better than trees or clumps of trees in the vicinity. Ridge tops should be avoided. Handheld radios with short rubber antennas are safe to use. Avoid using land line radios or radios with elevated antennas. If you feel the hair on your arms or head "stand up", there is a high probability of a strike in the vicinity. Crouch or sit on a pack. Review page 21 in IRPG for more info
All	Steep Terrain / Cliffs	Rocks/trees have potential to fall onto 96 on Div-F. Do Not place yourself in harm's way. Stay clear. Post lookouts if there is a NEED to work in this area. Focus! Concentrate on foot placement to limit slips, trips and falls on steep slopes. Flag areas & communicate to personnel, known " Do Not Enter " zones
All	Fire Behavior	Possible spot fire sleepers. Keep your eyes to the green & head on a swivel. Review risk associated with suppressing these in snag patches. Mitigate hazards before committing resources. Take your time. Preplan! Identify Trigger Points! How long will it take you to get back to your vehicles and exit the area safely? Know your escape routes as the situations change.
All Personnel Includes ICP	Heat Related Illness/Injuries	STAY HYDRATED before, during and after shift. "Energy Drinks" such as Monster, Red Bull or Rockstar contribute to heat injuries and should not be consumed. Pre-Plan the needs of your crews. Stage more water and Electrolyte drinks along your work area.
M, Z & West Zone	Working with Heavy Equipment	Stay at least 100' in front and 50' behind the equipment. In Timber, distances should be increased to 2½ times the tallest tree height. Avoid working below equipment. Make eye contact with operator: blade down, idle down, before approaching.
All	Difficult terrain and conditions for providing for emergency medical needs.	Review Med Plan before the need arises. Limit high risk activities. Have a backup plan AND don't depend solely on air resources. Practice the "What if" scenarios.
All	Danger/Hazard Trees within Fire Area & Routes to work areas. Danger Trees at Night	Use caution when traveling/working during windy conditions. Scan work area for Danger Trees in or near work site before committing resources. Limit exposure. Mitigate if safe. Use qualified fallers. Absolutely no Felling of Danger trees at night.
All	Personal Protective Equipment	ALL Personnel are reminded to wear PPE when in route to and from the fire and within the fires perimeter. Insure PPE is compatible with hazards and risks.

Today's discussion is from the
Fireline Safety Category

FIGHT FIRE AGGRESSIVELY, BUT PROVIDE FOR SAFETY FIRST

Standard Fire Order #10 must be taken into account at all times when fighting fire. In order to fight fire safely and aggressively, every firefighter must be able to answer the following questions:

- Is the suppression method adequate? Ask yourselves, are we making progress? Are we beating our heads against a wall? Is there a better way to get this done? Give examples when you have had to change your suppression method.
- Are there adequate resources and time for effective suppression? Ask yourselves, do we need to retreat and reevaluate? Talk about times when you have realized you weren't getting anywhere and needed to retreat and start managing firefighters and placing orders.
- Are lookouts posted? Discuss when you post lookouts, who you would choose to be a lookout, and where they should be located.
- Are communications prompt with crews and other resources? Review the importance of good communications on the fireline.
- Have escape routes and safety zones been established? Talk about your crew's procedure for establishing escape routes and safety zones. Review what constitutes an escape route and a safety zone.
- Do you feel comfortable with your assignment? Discuss the situation check. Remind firefighters that every individual has the right to question an assignment.
- To reduce the risks:
 - Post lookouts.
 - Retreat if the situation is too complex. Emphasize that safety is everyone's responsibility; we all want to be good firefighters and being safe is part of that.
 - Do you have established trigger points?
