Incident Action Plan

Thursday, Aug 10th to Friday, Aug 11th, 2017
Day Shift 0600 – 2000 Night Shift 1800 - 0800

TRANSFER OF COMMAND

- Be aware that the location of safety zones and escape routes may not be known and communicated to all resources.
- Risks to fireline personnel increase significantly during transfer of command periods
- Be proactive in mitigating the risks by proper implementation of LCES

DRIVING HAZARDS

- The road you are on today may be different than the same road was yesterday
- Even a little rain changes the condition of the road surface
- The speed limit is “slow enough to deal with anything coming at you around the next corner”

WEATHER SUMMARY:

*****Please See attached Fire Weather Forecast*****

A continued chance of showers, thunderstorms and lightning today. Gusty and erratic outflow winds will be possible with cell passage. Temperatures and humidities are slightly lower. Winds will be terrain influenced and northeasterly over the ridges. Lightning Activity Level (LAL): **3 Chance of Wetting Rain (CWR): 10%**

Today: Partly Cloudy. 30% chance of thunderstorms after noon.

Max Temp: **East Zone 86-96° West Zone 86-92°**

Min RH: **East Zone 25-33% West Zone 30-40%**

20 FT Winds:

Slope/Valley- Calm to light winds in the morning, then **upslope/upvalley 3-7 mph** after noon with **15mph** gusts.

Ridge Top- E/NE 4-8 mph with gusts to 12 mph in the morning, becoming W/NW by afternoon.

Ukonom Fire:

More hold over spot fires from lightning are possible as conditions dry **ERC: 65 (normal)**, or inversions lift in mid-afternoon. Spot fire growth will be moderated by moist conditions and light winds **BI: 47 (below average)**. If the inversion begins to lift and the air begins to move, terrain influenced winds have the ability to increase fire behavior. Down logs and pockets of heavy surface fuels continue to be the primary carrier for surface fire spread. When slope, aspect, and wind align surface fire runs may be possible. Occasional torching in smaller trees and pockets of dense brush are likely. Spotting has mainly occurred in the form of rollout, but lofted fire brands are possible when torching occurs.

Fork Fire: Fire behavior has been generally low with minimal activity in the form of backing, creeping and flanking. Light and variable winds will lend to minimal fire growth. Occasional single tree torching could be possible in smaller trees. Spotting has mainly occurred from rollout, but lofted fire brands are possible if heavy pockets of fuel actively burn. Fire activity is likely to increase if outflow or erratic winds from thunder cell passage materialize over the fire.

Flame lengths of 5-8' and rates of spread of **8-10 ch/hr** are possible for head and flanking fire. Backing fire **flame lengths** between **1'-3'** with rates of spread of **4 ch/hr or less** are likely. **Spotting up to .2 mi** is possible. **Probability of ignition** will be between **60% and 80%** during the heat of the day. **Probability of ignition from lightning strike 20%.**

Division A-M: Fire will continue backing down slope consuming unburned pockets of fuel.

Division F: Active fire behavior and swirly canyon winds have the potential to carry fire brands across the Klamath River from Division A. Be vigilant of possible lightning holdovers in the area.

Division Z: Be aware of main fire below Ukonom lookout, and expect potential fire growth with weakening inversion layer in late afternoon. Be vigilant of possible spot fires which may have occurred and held over from gusty outflow winds during last two evenings.

Forks: Fire growth will be minimal in the absence of a sustained wind event. Gusty outflow winds from thunderstorm passage could provide this wind event.

Little: Backing and creeping fire will continue, little growth expected unless influenced by outflow winds.

AIR OPERATIONS

Poor visibility will cause issues and delays for air operations into the early afternoon again today. Thunder cells by late afternoon may also cause issues and delays.

SAFETY

Rolling material can ignite spot fires below crews.

<input type="checkbox"/> PRIORITY-YELLOW <i>Serious Injury or illness.</i> <i>Ex: Significant trauma, not able to walk, 2° - 3° burns not more than 1-2 palm sizes.</i>	Ambulance or consider air transport if at remote location. Evacuation may be DELAYED.
<input type="checkbox"/> ROUTINE-GREEN Not a life threatening injury or illness. <i>Ex: Sprains, strains, minor heat-related illness.</i>	Non-Emergency. Evacuation considered Route of Convenience.

5. TRANSPORT PLAN:

Air Transport: *(Agency Aircraft Preferred)*

9. CONTINGENCY: *If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead...*

REMEMBER:

- Confirm ETA's of resources ordered
- Act according to your level of training
- If air or ground ambulance is DELAYED: Package and transport patient to rendezvous with incoming Ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

Orleans Complex - Ukonom Fire & West Zone - Incident Risk Analysis (215a)

Div.	LCES Analysis of Tactical Applications (Hazardous Actions or Conditions)	LCES Mitigations/Warnings/Remedies
F	Working along 96 corridor	Be aware of rocks/trees on Highway 96. Have your Red Lights on when parked. If working along the roadway, use caution when walking around vehicle on the traffic side. When patrolling at slow speeds, have your Hazard Flashers on.
All	Mountain Driving	Forest Road 15 (aka G-O Road) has buckling and undulations. Be aware of areas of concern (flagged and painted) Drive with caution! A vehicle going downhill must yield the right of way to the vehicle going uphill by either safely pulling over or safely backing up. You MUST drive with caution always, and expect the unexpected. Maintain good sight/reaction distance. Seatbelts ON before the wheels turn! Headlights on to be seen.
All	Thunderstorms	Thunderstorms hazards include both downbursts and lightning. For downbursts monitor fire for increased fire behavior. For lightning, wide open spaces are better than trees or clumps of trees in the vicinity. Ridge tops should be avoided. Handheld radios with short rubber antennas are safe to use. Avoid using land line radios or radios with elevated antennas. If you feel the hair on your arms or head “stand up”, there is a high probability of a strike in the vicinity. Crouch or sit on a pack. Review page 21 in IRPG for more info
All	Steep Terrain / Cliffs	Rocks/trees have potential to fall onto 96 on Div-F. Do Not place yourself in harm’s way. Stay clear. Post lookouts if there is a NEED to work in this area. Focus! Concentrate on foot placement to limit slips, trips and falls on steep slopes. Flag areas & communicate to personnel, known “Do Not Enter” zones
All	Fire Behavior	Possible spot fire sleepers. Keep your eyes to the green & head on a swivel. Review risk associated with suppressing these in snag patches. Mitigate hazards before committing resources. Take your time. Preplan! Identify Trigger Points! How long will it take you to get back to your vehicles and exit the area safely? Know your escape routes as the situations change.
All Personnel Includes ICP	Heat Related Illness/Injuries	STAY HYDRATED before, during and after shift. “Energy Drinks” such as Monster, Red Bull or Rockstar contribute to heat injuries and should not be consumed. Pre-Plan the needs of your crews. Stage more water and Electrolyte drinks along your work area.
M, Z & West Zone	Working with Heavy Equipment	Stay at least 100’ in front and 50’ behind the equipment. In Timber, distances should be increased to 2½ times the tallest tree height. Avoid working below equipment. Make eye contact with operator: blade down, idle down, before approaching.
All	Difficult terrain and conditions for providing for emergency medical needs.	Review Med Plan before the need arises. Limit high risk activities. Have a backup plan AND don’t depend solely on air resources. Practice the “What if” scenarios.
All	Danger/Hazard Trees within Fire Area & Routes to work areas. Danger Trees at Night	Use caution when traveling/working during windy conditions. Scan work area for Danger Trees in or near work site before committing resources. Limit exposure. Mitigate if safe. Use qualified fallers. Absolutely no Felling of Danger trees at night.
All	Personal Protective Equipment	ALL Personnel are reminded to wear PPE when in route to and from the fire and within the fires perimeter. Insure PPE is compatible with hazards and risks.

TRANSFER OF COMMAND

Operational Engagement Category

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

Factors for increased risks to fireline personnel during transition periods include:

No, or poor, briefing of incoming personnel Lack of fire weather and behavior information, both forecast and observed Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system. Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources. Location of safety zones and escape routes may not be known and communicated to all resources. Not all Resources know who is in command.

Mitigation actions to take:

Lookouts: Post and maintain your own lookouts. **Communications:** Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor. **Escape routes and safety zones:** Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them. **Transition at the morning briefing** Utilize the Incident Response Pocket Guide transition checklist
