FIRE BEHAVIOR FORECAST

FORECAST NUMBER 23	TYPE OF FIRE: Wildland Fire
FIRE NAME: Orleans Complex	OPERATIONAL PERIOD: Day shift August 11, 2017
DATE ISSUED: August 10, 2017	TIME ISSUED: 2000
UNIT: Six Rivers NF	SIGNED: Kevin Maier FBAN (t) 

WEATHER SUMMARY: ***Please See attached Fire Weather Forecast***

A continued chance of showers, thunderstorms today. Gusty and erratic outflow winds will be possible with cell passage. Otherwise the strong inversion will prevail in the morning with light winds, then winds will be terrain driven with increasingly breezy conditions. Lightning Activity Level (LAL): **2 Chance of Wetting Rain (CWR): 5%**

Today: Partly Cloudy. 30% chance of thunderstorms after noon.

Max Temp: **East Zone 86-96° West Zone 86-92°**
Min RH: **East Zone 23-33% West Zone 26-36%**

20 FT Winds:

Slope/Valley- Calm to light winds in the morning, then **upslope/upvalley 3-7 mph** after noon with **15mph** gusts.

Ridge Top- E/NE 4-8 mph with gusts to 12 mph in the morning, becoming W/SW by afternoon.

Day Shift:

Fire behavior will be limited by moist atmospheric conditions. More hold over spot fires from lightning are possible today. Potential lightning starts or spot fire growth would be moderate due to moist atmospheric conditions and light winds. The Burning Index (BI) is **49 (below average)**. Fires will be under inversion during morning hours. If the inversions lift and the air begins to move, terrain influenced winds have the ability to increase fire behavior. Down logs and pockets of heavy surface fuels continue to be the primary carrier for surface fire spread. When slope, aspect, and wind align surface fire runs may be possible. Occasional torching in smaller trees and pockets of dense brush are likely. Spotting has mainly occurred in the form of rollout, but lofted fire brands are possible when torching occurs.

Night Shift: Fire behavior has been generally low with minimal activity in the form of backing, creeping and smoldering. Light and variable winds will lend to minimal fire growth. Fire activity may increase if outflow or erratic winds from thunder cell passage materialize over the fire.

Flame lengths of 5-8' and rates of spread of **8-10 ch/hr** are possible for head and flanking fire. Backing fire **flame lengths** between **1'-3'** with rates of spread of **4 ch/hr or less** are likely. **Spotting up to .2 mi** is possible. **Probability of ignition** will be between **60% and 80%** during the heat of the day. **Probability of ignition from lightning strike 20%**.

Division A: Fire will continue backing down slope consuming unburned pockets of fuel. Isolated torching possible.

Division F: Isolated gusts and swirling canyon winds could carry fire brands over Klamath River from Division A.

Division M: Fire will likely continue smoldering, creeping and flanking on the South side of Ukonom Creek. Be vigilant for spotting if windy conditions arise.

Division Z: Be aware of main fire below Ukonom lookout, and expect potential fire growth with weakening inversion layer in late afternoon. Be vigilant of possible spot fires which may have occurred and held over from gusty outflow winds during last two evenings.

Forks: Fire growth will be minimal in the absence of a sustained wind event. Gusty outflow winds from thunderstorm passage could provide this wind event.

Little: Backing and creeping fire will continue, little growth expected unless influenced by outflow winds.

AIR OPERATIONS

Poor visibility will cause issues and delays for air operations into the early afternoon again today.

SAFETY

Smoldering, fire weakened trees may fall unexpectedly.
