FIRE BEHAVIOR FORECAST

FORECAST NUMBER 26	TYPE OF FIRE: Wildland Fire
FIRE NAME: Orleans Complex	OPERATIONAL PERIOD: Day shift August 14, 2017
DATE ISSUED: August 13, 2017	TIME ISSUED: 2000
UNIT: Six Rivers NF	SIGNED: Kevin Maier FBAN (t) 

WEATHER SUMMARY: *Please See attached Fire Weather Forecast*****

Today:

Morning valley clouds, then becoming partly to mostly sunny. A weak, mid-level wave moves southeast of the area in mid-afternoon.

Max Temp:	East Zone 81-91°	West Zone 78-85°
Min RH:	East Zone 20-30%	West Zone 30-40%
20 FT Winds:		

Slope/Valley- Calm to light winds in the morning, then becoming upslope/upvalley 3-7 mph with afternoon gusts around 15 mph.

Ridge Top- N 3-6 mph, becoming NW 4-8 mph with gusts to 12 mph in the afternoon.

Day Shift:

Fire behavior will be increasing as temperatures begin to trend higher, and air and fuels become drier. Fires will be under inversion during the morning hours, creating backing and creeping fire conditions. If inversions lift and the air begins to move, terrain influenced winds have the ability to increase fire behavior. Down logs and pockets of heavy surface fuels continue to be the primary carrier for surface fire spread. When slope, aspect, and wind align surface fire runs are possible. Occasional torching in smaller trees and pockets of dense brush are likely. Spotting has mainly occurred in the form of rollout, but lofted fire brands are possible when torching occurs.

Flame lengths of 4-8' and rates of spread of **7- 9 ch/hr** are possible for head and flanking fire under windy conditions. Backing fire **flame lengths** between **.5'-3'** with rates of spread of **4 ch/hr or less** are more likely. **Spotting up to .2 mi** is possible. **Probability of ignition** will be between **60% and 80%** during the heat of the day.

Night Shift:

Fire behavior will be generally low with minimal activity in the form of backing, creeping and smoldering. Light downslope winds and thermal belts will be the main drivers of fire growth. Haypress fire could burn actively at night on steep slopes within a thermal belt.

Division A: Fire will continue smoldering, creeping and consuming unburned pockets of fuel. Isolated torching possible.

Division F: Isolated gusts and swirling canyon winds could carry fire brands over Klamath River from Division A.

Division M: Fire will likely continue smoldering, creeping and flanking on the South side of Ukonom Creek. Be vigilant for spotting if windy conditions arise.

Division Z: Be aware that main fire is holding in place below Ukonom lookout. A potential for increased fire behavior on Zulu 1-8 during afternoon wind gusts.

Haypress Fire: Will continue to back down steep slopes to Wooley Creek; active rollout will be a primary agent of downhill spread. Spotting into the Bridge Creek drainage is also possible. Will move upslope through ground fuels, brush, and heavy logs. Expect to see growth, especially if aligned with upslope gusts during the afternoon.

AIR OPERATIONS

Poor visibility may cause issues and delays for air operations into the early afternoon again today.

SAFETY

Fire in steep drainages can dislodge rolling objects and firebrands. Expect that a fire will utilize gravity and make significant acreage gains.
