## FIRE BEHAVIOR

### GENERAL

The Haypress Fire is currently the most active within the Complex. Expect it to continue backing toward Wooley Creek, spread westerly toward indirect containment lines, and spread northeast into the wilderness.

The Ukonom Fire is also active at the easterly edge near Ukonom Creek and Lick Creek. It will continue to back toward Lick Creek and Ukonom Creek and burn up drainage to the west toward Ukonom Lookout and southerly toward indirect containment lines. There is a potential to cross Ukonom and Lick Creek drainages.

### SPECIFIC FIRE BEHAVIOR

#### Daytime

Expect the fire behavior to be low to moderate until early afternoon. Fire spread will be primarily backing and flanking with some upslope movement during the early portion of the operational period.

Timber fuel types (generally no recent fire history): potential worst-case surface fire spread will be 8-12 chains/hour with flame length 4 to 6 feet. Occasional torching trees should be expected. Spotting distance will be up to 2/10 - 3/10 of a mile. Probability of ignition will be 70-80%.

Recent Fire Scar areas (Haypress, Panther footprints): potential worst-case surface fire spread will be 4-8 chains/hour with flame length 3-5 feet. Most fire spread will be through heavy dead down fuels. Anticipate spotting distances up to 2/10 – 3/10 of a mile. Probability of ignition at the peak of the burning period will be 70-80%.

#### Nighttime

Expect the fire behavior to moderate after midnight with head fire spread rates significantly reduced with primary spread through backing and flanking. Spotting will less than 1/10 mile, Probability of ignition 30-40%.

## AIR OPERATIONS

Air operations may be limited during the day due to poor visibility caused by smoke.

8/26 Sunrise: 06:34      Sunset: 19:56      8/27 Sunrise: 06:35

## SAFETY

Pay attention to changing weather conditions over the next several days. The weather is becoming hotter and much drier than it has been recently. A higher Probability of Ignition will result in increased spotting potential. Ensure adequate patrols where ignition operations are occurring.

2. Failing to notice changing conditions and adjusting tactics accordingly.

### 7 Barriers to Situational Awareness

1. Inexperience.
2. Getting too Comfortable (Complacency, Inattention, Autopilot).
3. Distraction from Primary Duty.
4. Priorities Out of Order.
5. Social Influences (Groupthink, Peer Pressure).
6. Stress Reaction (Tunnel Vision, Mission Fixation).
7. Physical Impairment (Fatigue, Carbon Monoxide, Heat Stress, Medications).

### MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT SNAGS COMPLACENCY
--	---	---

*Be sure all elements of your safety plan are in place prior to engagement*

### Planning for Medical Emergencies

Ask and be able to answer these 3 questions

1. What are we going to do if someone gets hurt?
2. How will we get them out of here?
3. How long will it take to get them to a hospital?

All operational activities should be based on answers to these questions. See page 2 of the IRPG for more information.

**Ensure all personnel are familiar with the Emergency Medical Form on the back of the IAP**

### Weather Observations

Communicate the fire weather and fire behavior forecast to your personnel

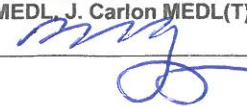

Take local weather observations at your place of work

Communicate the local weather to all of your personnel

Establish decision points to monitor weather issues that can compromise your safety
