FIRE BEHAVIOR

GENERAL

The Haypress Fire is currently the most active within the Complex. Expect it to continue backing toward Wooley Creek and spread northerly and easterly into and within the Marble Mountain Wilderness. There could be significant spread westerly toward indirect containment lines based on predicted winds.

The Ukonom Fire is also active at the easterly edge near Ukonom Creek and Lick Creek and continues to show heat during IR flights. It will continue to slowly back toward Lick Creek and Ukonom Creek and possibly burn up drainage to the west toward Ukonom Lookout and southerly toward indirect containment lines. This may become a strong possibility during the next 24 hours. There is a potential to cross Ukonom and/or Lick Creek drainages.

SPECIFIC FIRE BEHAVIOR

Daytime

Expect the fire behavior to be moderate with the potential for extreme fire behavior due to high temperatures, low humidity, and moderately strong winds.

Timber fuel types (generally no recent fire history or stringers in burn areas): potential worst-case surface fire spread will be 10-14 chains/hour with flame length 6 to 8 feet. Occasional torching trees should be expected, with the possibility of sustained crown runs. Spotting distance will be up to 1/2 of a mile. Probability of ignition will be 80-90%.

Recent Fire Scar areas (Haypress, Panther footprints): potential worst-case surface fire spread will be 8-10 chains/hour with flame length 4-6 feet. Most fire spread will be through heavy dead down fuels but may involve brush which will increase intensities and spread rates. Anticipate spotting distances up to 1/2 mile. Probability of ignition at the peak of the burning period will be 80-90%.

Nighttime

Expect the fire behavior to remain active through the night with head fire spread rates and other fire behavior attributes to be moderate to possibly extreme. Spotting will be up to 4/10 mile, Probability of ignition 50-70%.

AIR OPERATIONS

Air operations will be limited during portions of the day due to poor visibility caused by smoke.

8/31 Sunrise: 06:39 Sunset: 19:48 9/01 Sunrise: 06:40

SAFETY

The next 24 hours will bring critical fire weather with a high potential for extreme fire behavior. Ensure you have escape routes and safety zones identified. Communicate observed fire behavior to others if conditions begin to change. Ensure you have good communications with all others in your area.

SAFETY MESSAGE

Planning for Safety

- Working in high-risk environments requires effective planning to protect personnel from the hazards they may face.
- You should have tactical, safety and communication plans which work in concert with one another.
- Each plan should include primary, alternate, contingency, and emergency components which are known by all personnel.
- Changing from your primary plan should be a red flag that your safety may become compromised.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT SNAGS COMPLACENCY
--	---	---

Be sure all elements of your safety plan are in place prior to engagement

Risk Management

- Keep risks commensurate with the benefit.
- Utilize the Risk Management Process found on page 1 of the IRPG.
- Recognize that no injury is worth the ground you are working.
- Everyone is entitled to a round trip ticket. Bring them home healthy.

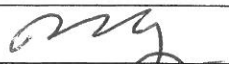

Stay Hydrated

Drink fluids before, during, and after the shifts.

For every 2 bottles of water, drink 1 bottle of Gatorade.

At 2% dehydration, performance will fall off by 10-20% and is the #1 trigger of fatigue
