FIRE BEHAVIOR

GENERAL

The Ukonom Fire is active and continues to show heat during IR flights. It will continue to burn further up drainage to the west toward Ukonom Lookout and southerly toward indirect containment lines. There is a potential to cross Ukonom and/or Lick Creek drainages.

The Haypress Fire is currently the most active within the Complex. Expect it to continue backing toward Wooley Creek and spread northerly and easterly into and within the Marble Mountain Wilderness. Expect continued movement in a southwesterly direction in the vicinity of Merrill Mountain toward the Klamath River/Salmon River. Continued movement on most of the western flank of the fire toward the Klamath River.

SPECIFIC FIRE BEHAVIOR

Daytime

Expect the fire behavior to be moderate with the potential for extreme fire behavior early in the operational period. Fire behavior will be greatly reduced if smoke continues to impact the area.

Timber fuel types (generally no recent fire history or stringers in burn areas): potential worst-case surface fire spread (head fire) will be 6-8 chains/hour with flame length 4 to 6 feet. Occasional torching trees should be expected, with the possibility of short-duration crown runs. Spotting distance up to 2/10 of a mile. Probability of ignition will be 40-60%.

Recent Fire Scar areas (Haypress, Panther footprints): potential worst-case surface fire spread will be 4-6 chains/hour with flame length 3-5 feet. Most fire spread will be through dead down fuels but may involve brush which will increase intensities and spread rates. Anticipate spotting distances to 2/10 mile. Probability of ignition at the peak of the burning period will be 40-60%.

Nighttime

Expect the fire behavior to be much reduced during the night with primarily flanking and backing fire and low spread rates. Flame lengths will be 2-4 feet, spotting will be less than 2/10 mile. Probability of ignition 20-40%.

AIR OPERATIONS

Air operations will be limited during the day due to poor visibility caused by smoke.

9/04 Sunrise: 06:43 Sunset: 19:41 9/05 Sunrise: 06:44

SAFETY

Smoky conditions will continue to hamper situational awareness affecting the ability to observe fire behavior and hazards.

DAY/NIGHT SHIFT

Groups	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	DANGER TREES	<ul style="list-style-type: none"> Follow "Hazard Tree Safety" guidelines, IRPG pages 22. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during "high wind events".
ALL	TRAFFIC & DRIVING	<ul style="list-style-type: none"> Practice "Defensive Driving" techniques. Use spotters when backing. Always use headlights. Use warning lights when working on roads or traveling in smoke. Many roads are narrow and mid slope, use caution. School is back in session. Observe posted speed limits. Watch for Children. Keep speeds down on Hwy 96, road is rough in spots.
ALL	FIRE WEATHER	<ul style="list-style-type: none"> Winds increasing or changing direction. Weather becoming hotter and drier. Unstable atmosphere can promote rapid fire growth.
NORTH, SOUTH, NIGHT	FIRING OPERATIONS	<ul style="list-style-type: none"> Conduct thorough briefing for all personnel (inside rear cover IRPG). Qualified personnel for all assignments. Trainees to have qualified trainers. Utilize Risk Mgmt. Process (IRPG p. 1) for implementing the plan. Required PPE to be worn by all personnel involved. Establish LCES prior to implementing burning operations (IRPG p. 7). Assign an over-all Firing Boss to coordinate ignitions when simultaneous burning operations are planned for multiple locations.
NORTH, SOUTH, NIGHT	SPOT FIRES	<ul style="list-style-type: none"> Size up prior to engagement. Watch for multiple spots. Ensure LCES is in place. Maintain Situational Awareness at all times
SOUTH STRUCTURE	CHIPPER OPERATIONS	<ul style="list-style-type: none"> Ensure JHA is provided and signed by operators. Only qualified personnel will feed the chipper. Ensure appropriate PPE is used including eye and hearing protection.
ALL	STEEP TERRAIN & ROLLING DEBRIS	<ul style="list-style-type: none"> Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Evaluate necessity to send personnel in areas with limited access.
ALL	DRY FUEL CONDITIONS	<ul style="list-style-type: none"> Establish and maintain LCES. Anticipate intense burning and rapid rates of spread. Watch for spot fires. Allow a for adequate escape times based on burning conditions.
ALL	BEAR PRECAUTIONS	<ul style="list-style-type: none"> Pick up and remove all trash from fire line. Don't allow food storage in tents. Manage trash in spike camps to avoid attracting bears.
NORTH, SOUTH,	AIR OPERATIONS	<ul style="list-style-type: none"> Follow "Aviation Watch-Out Situations" on page 44, IRPG. Don't plan on air resources for medical transport or resupply. Refer to page 57, IRPG for directing bucket drops. Ensure positive communication with all air resources.
STRUCTURE NORTH, SOUTH	STRUCTURE PROTECTION	<ul style="list-style-type: none"> Ensure LCES is in place. Review Structure Protection; IRPG pages 12-16. Do not commit to stay on a structure unless the area around the structure represents an adequate safety zone. 	SAFETY MESSAGE

WHAT IS THE PROBABILITY OF SUCCESS?

- When you are developing your tactical plan honestly weigh the probability of successfully completing your objectives.
- Do you have the time, resources, logistical support, and supervision needed for the assignment?
- Do you have all elements of your safety plan in place?
- Are the risks associated with the assignment worth the gain?
- When your probability of success falls below 75% it should be a red flag to consider an alternative plan.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT HAZARD TREES COMPLACENCY
--	---	--

Be sure all elements of your safety plan are in place prior to engagement

Hazard Tree Safety

Inspect area for hazard trees before starting work. Are there trees that have been falling, leaning, hung up, or have broken tops? Are there high risk species? How long has the fire been burning in the area?

Identify hazards and fell or avoid the hazard and flag.

Take down hazard trees only with qualified sawyers and then only if necessary.

Mitigate or Change Tactics When Faced With

- Indirect Fireline
- Lack of Anchor Point(s)
- Frontal Assault
- Change in wind speed and/or direction
- Re-burn Potential
- Presence of Hazardous Materials
- Lack of Communications
- Structural Protection
- Spotting Becomes Common
- Downhill Line Construction
