# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: #55	TYPE OF FIRE: Wildfire
FIRE NAME: Orleans Complex	OPERATIONAL PERIOD: September 11 – 0600 to 2000
DATE ISSUED: September 10, 2017	TIME ISSUED: 2000 hrs
UNIT: Six Rivers NF	SIGNED:  Mike Beasley FBAN

## INPUTS

### WEATHER SUMMARY

(Refer to Weather Forecast for details) DAY: Mostly sunny. Max Temp: 88-102°. Min RH: 13-29%.  
Slope/Valley – Northeast 2-5 mph, becoming upvalley or west 3-6 mph w/ gusts to 8mph in the afternoon. Ridges – Northeast to east 5-10 mph, gusts 15-20. West 3-6 w/ gusts to 10 mph in the afternoon.

### FIRE BEHAVIOR GENERAL

The Ukonom Fire has shown no spread over the past several days. A few scattered heat sources remain, but the Ukonom Fire will remain parked at Lick Creek w/ no chance of spread for 3-4 days.  
The Haypress Fire is becoming more active, after rain four days ago. Sheltered timber fuels are the most active w/ many morning smoldering duffers giving way to significant pockets of heat with longer open flames on downed logs in the afternoon. Expect fire weakened trees to continue to fall with heat inside. Rollout, as a mechanism of spread, can be expected on all steep slopes. Expect continued rollout in a southwesterly direction in the vicinity of Merrill Mountain toward Merrill Creek and continued rollout into the headwaters of Rodgers, Irving and Sandy Bar Creeks on the west flank. Minimum fine fuel moisture: 4-5%, 1000 hour FMC: 7-9%, Live fuel moisture: 75-90%.

### OUTPUTS - FIRE BEHAVIOR

➤ Forecasted Indices (Dutch-Indie) ERC: 55 (Up 1) BI: 62 (Up 2)

**GENERAL:** Continued gusty east winds in the morning, followed by heat and low humidity in the afternoon. This will create conditions more conducive to fire spread. Today will see more creeping with open flames through sheltered timber litter, with the occasional torching tree. Spotting will remain short-range. Heavy fuels will continue to consume in pockets. Rollout will continue on steep slopes, and a short run is not out of the question, especially in the case of a slope reversal. Many portions of the perimeter with fuel discontinuity (e.g. young brush fields around East Peak) have self-extinguished.

**DIV A (Zone 5)** – No fire threat at all.

**DIV M/O** – Haypress Fire will continue to be checked by Wooley Creek to the south and Bridge Creek to the east.

**DIV R (Zone 1)** – Mostly smoldering, except above Wooley Creek near Deer Lick Creek, where a hot pocket was detected yesterday afternoon. Slight chance of a slope reversal moving quickly up toward the 15N17 Rd. in Merrill Creek.

**DIV T (Zone 2)** – Mostly smoldering and creeping where crews are working to pick up the slopover the 15N17 Rd. where fire is backing into the head of Rodgers Creek north of DP-210.

**DIV W (Zone 3)** – Smoldering and creeping. Possibility of continued rollout and limited backing spread down to Irving Creek. The Marble Fire and constructed fireline will continue to check western spread of the Haypress Fire

**DIV Z (Zone 4)** – Creeping and pockets of heat in dead and down concentrations. Fire will resist spread north of Sandy Bar Creek due to numerous springs and wet meadows. The south end of the Ukonom Fire near Ukonom Lookout will remain quiet. Spread remains checked on Lick Creek,

**Typical Rate of Spread:** < 3 chains/hour **Flame Length:** < 1 ft. (smoldering and creeping). **Maximum Fire Behavior (head fire upslope):** Flame lengths to 7 ft and ROS to 17 ch/hr **Spotting distance:** < 1/4 mi. **Probability of Ignition:** 66-71%

### AIR OPERATIONS

Visibility will be good for air operations after 10am over the Ukonom & Haypress Fires for the rest of the day.  
September 11th Sunrise 6:53am Sunset 7:33pm

### SAFETY

- Just because the fire was relatively quiet yesterday, doesn't mean it will be today. Do you know where your safety zone is? *"In the middle of difficulty lies opportunity." Albert Einstein*

All	Weather	Hotter & Drier. Drink before, during and after shift. <b>Do NOT dilute electrolyte drinks.</b> They are formulated to be consumed as is for your body to absorb faster. Rest often, find shade as needed (check for hazards first). Pace work throughout the day.
All	Bees, Wasps & Hornets	<b>Known areas? Flag off and Communicate to affected resources.</b> Pre-Identify those resources with known allergies. Pre-plan your response (Epi-Pen's, Benadryl supply, Medical personnel etc).
All	Communications	<b>Use human repeaters for areas with poor reception.</b> Ensure transmissions are complete. Follow the order model: hail receiver, receiver acknowledges, message sent, message confirmed.
All	Steep Terrain & Rolling Material	Ensure secure footing. Keep appropriate work spacing so crewmembers can react to dislodged debris. Post lookouts to warn of rolling debris. <b>Concentrate on foot placement to limit slips, trips and falls.</b>
All	SMOKE & Terrain making it difficult to provide for emergency medical needs	<b>Do NOT assume air resources will be able to assist. Pre-plan the "What ifs".</b> Review Med Plan before the need arises. Limit high risk activities. <b>Have a backup plan or two.</b> Discuss different scenarios AND Practice the "What if" scenarios.
All	Danger Trees within Fire Area & Routes to work areas	Fire Weakened Trees, Loosened wet soils weakening tree root structure. <b>Assess the need to work in areas that haven't been recently assessed for hazards.</b> Watch out when traveling/working during windy conditions. <b>Limit exposure.</b> Mitigate if safe. Use qualified fallers.
All	Working with Heavy Equipment	<b>Stay at least 100' in front and 50' behind the equipment (300'+ feet with masticators).</b> In Timber, distances should be increased to 2½ times the tallest tree height. Avoid working below equipment. Make eye contact with operator: blade down, idle down, before approaching.
All	Poison Oak Exposure	Know what it looks like. <b>"Leaves of three, let it be"</b> <b>Change or launder Nomex frequently.</b> Ensure proper Personal Hygiene. Seek medical attention as needed.

**Before Work** you should take extra fluids to prepare for the heat. Drink 1 to 2 cups of water, juice, or a sport drink before work. Avoid excess caffeine. It hastens fluid loss in the urine.

**While working**, take several fluid breaks every hour, drinking at least 1 quart of fluid. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat. Studies show that workers drink more when lightly flavored beverages are available. Providing a portion of fluid replacement with a carbohydrate/electrolyte sport beverage will help you retain fluids and maintain energy and electrolyte levels.

**After work**, you need to continue drinking to replace fluid losses. **Thirst always underestimates fluid needs**, so you should drink more than you think you need. Rehydration is enhanced when fluids contain sodium and potassium, or when foods with these electrolytes are consumed along with the fluid
