FIRE BEHAVIOR

INPUTS:

- **Fuels:** Dry conditions will make all fuel available to burn. Night time humidity recovery has not been high enough to extinguish areas of heat inside containment lines.
- **Topography:** Return of Southerly winds for higher elevations.

FIRE BEHAVIOR: Moderate fire behavior will continue for interior pockets. During the hottest part of the day, 1430-1730, Expect FL of 12ft and ROS of 39ch/hr in brush and FL of 4-7ft and ROS of 8ch/hr in timber fuels. Areas of brush and hardwood litter outside the containment lines continue to be susceptible to strong upslope runs and spotting.

Probability of Ignition: 85% in clear air. **Spotting Distance:** .2 mile from ridgetop locations.

Day: DIV PP/TT: Interior pockets continue to consume. Monitor interior torching for possible long range spotting as wind direction switch to a black to green orientation (South).

DIV WW/YY: Pockets of fuel are becoming less numerous. Smokes will remain visible from the interstate.

DIV ZZ/AA/CC: Burndown continues and rollout remains probable in DIV CC. Greater wind impacts with the return of Southern winds. Elsewhere, only isolated areas of heat remain.

DIV DD/GG: Except for the area near the CC/DD break, few areas of heat remain along the line. Little threat of escape.

DIV JJ/MM: Forecast winds will blow from black to green in Western portions of DIV MM. Monitor for production of embers from torching or remaining heat near line.

Hirz Fire: Little threat of escape.

Night: North – DIV PP/TT/WW/YY: Little threat of escape during overnight hours.

South – DIV ZZ/AA/CC: Threat of escape greatest from rollout. Winds on DIV CC will be a game day call. Southerly winds may or may not over power the Northerly winds in the Lunch Gulch area...

AIR OPERATIONS

Clear conditions with little smoke impact.

SAFETY

** Initial attack fire behavior will be greater than the Delta has exhibited over the past several days. **

Delta Fire - Safety Message

INCIDENT # CA-SHF-001444

DATE: 9/21-22/18 TIME: 0600-0600 Day- Nite

See Something Say Something, Communicate Safety!

- **Take Charge** of assigned resources.
- **Motivate** firefighters with a “can do safely” attitude.
- **Demonstrate Initiative** by taking action in the absence of orders.
- **Communicate** by giving specific instructions and asking for feedback!
- **Supervise** at the scene of the action.

(From “Operational Leadership” page vi of the IRPG)

General Safety Concerns

- **Driving-** Predictable is preventable. Speeding=Accident. Slow down and keep an eye out for wildlife and civilians.
- **Wildlife-** Bees are becoming an issue. Avoid when possible and know the Medical Plan (ICS 206) in the event of an incident. Know your people, are any of them allergic?
- **Stump Holes-** Lots of stump holes are out there. Use your tools to probe in front as you walk.
- **Dehydration** - It can take it's toll. So drink lots of **WATER**. Strive to drink 2 quarts per hour during heavy exertion.
- **Footing-** Lots of steep and unstable terrain. Please take extra time and care out there.

Make a Safety Difference

- As a supervisor, provide constant and relentless oversight.
- ***Stay focused on the task at hand, all the time!***
- Come up with a safer way to perform a risky assignment.
- Discuss the near miss.
- Never tolerate “Hey, watch this!”
- Discuss the effects of fatigue, and mitigate the effects of fatigue.
- While in the fire zone, wear your hardhat when you leave the vehicle.
- Have a purpose in what you do.

Don't trust other drivers!

Common Denominators of Fire Behavior On Tragedy Fires

- Most incidents happen on the smaller fires or on isolated portions of larger fires.
- Most fires are innocent in appearance before the “flare-ups” or “blow-ups”. In some cases, **tragedies occur in the mop-up stage.**
- Flare-ups generally occur in deceptively light fuels.
- Fires run uphill surprisingly fast in chimneys, gullies, chutes and on steep slopes.
- Some suppression tools, such as helicopters or air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups.

Team 4 Safety Group

INCIDENT RISK ANALYSIS

(ICS 215a) Day - Night Shift

BR/ DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	<p>FATIGUE & COMPLACENCY</p>	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor ALL resources for level of fatigue. • Recognize the symptoms of fatigue and take action as necessary to provide rest and recovery. • Repeated assignments in the same area can lead to complacency making personnel more vulnerable to accidents. • Take steps (switching of assignments, training opportunities during slow periods, etc.) to maintain situational awareness for the duration of the incident
ALL	<p>TRAFFIC HAZARDS AND DRIVING</p>	<ul style="list-style-type: none"> • Practice "Defensive Driving" techniques. Traffic volume is high. I-5 is open • Use spotters when backing. • Always use headlights. • Use warning lights when working on roads or traveling in smoke. • Observe posted speed limits. • Use chock blocks, turn wheels into hill. • Many roads are narrow and mid slope, use caution.
ALL	<p>HAZARD / DANGER TREES</p>	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.22-23). • Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled. • Be especially alert around snags during wind events. Large green trees can also be dangerous.
ALL	<p>STEEP TERRAIN & ROLLING MATERIAL</p>	<ul style="list-style-type: none"> • Avoid working below crews and equipment. • Concentrate on your footing placement; take your time. • Ensure adequate spacing between crewmembers so they can react to dislodged debris. • Post lookouts to warn of rolling debris. SHOUT out to warn others. • Look Up, Down and Around Frequently.
ALL	<p>HEAVY EQUIPMENT OPERATIONS</p>	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Ensure ground personnel have safety illumination, with light-sticks being the minimum. • Maintain a 50'-100' exclusion area around equipment. • In timber increase safety distance to 2 ½ times canopy height. • Only approach after making visual contact with operator. • Never hitch a ride. • Most pieces of equipment are designed for only one person.
ALL	<p>COMMUNICATIONS</p>	<ul style="list-style-type: none"> • Share your Situational Awareness (hazards, changes, etc.) to those who also have a need. • Radio Communications may be poor in some areas: use human repeaters as needed. • Ensure all personnel are familiar with the incident and IA communications plans. • Make sure all resources have radios cloned appropriately. • Ensure that non-agency resources understand radio use and procedures.
ALL	<p>AVIATION OPERATIONS</p>	<ul style="list-style-type: none"> • Conduct thorough mission assessments before starting work. Follow the guidelines in the IHOG and other aviation guidelines and reference materials. • Ensure coordination and communication are in place and understood by all involved resources in a mission. • Ensure close coordination between Air Attack, air tankers, helicopters, and ground resources.
ALL	<p>POWERLINES / UTILITIES</p>	<ul style="list-style-type: none"> • Notify all personnel of down electrical lines. • IRPG Page 24 -- Take time to do a Tailgate Safety Briefing • Always treat downed wires as energized. • Avoid parking under any type of overhead lines. • Identify all gas lines in and around structures. • Report damaged service lines.
ALL	<p>FIRE BEHAVIOR</p>	<ul style="list-style-type: none"> • Are you seeing what we have predicted? • Conduct thorough assessments before starting work. • Ensure LCES is in place. • Plan & Communicate your exit strategy, with your crew and adjacent resources. • Provide additional briefing for new resources and maintain communications.
ALL	<p>END OF ASSIGNMENT WATCH - OUTS</p>	<ul style="list-style-type: none"> • Not mentally engaged in the task at hand. • You or your driver are driving faster than when you arrived. • Not giving good, thorough briefings. • Your hardhat and web gear are still on the truck. • Assuming all is good because you worked this piece of ground yesterday. • All conversations are around what you're going to do when you get home. • You and your folks are tripping and stumbling more than usual. • It's taking longer to get out of camp.

INCIDENT REPLACEMENT POLICY & PROCESS

Prior to release from the incident, personnel may request replacement of equipment and supplies that were damaged, lost, or consumed during the incident. There is a distinct difference in the process to replace cache equipment and supplies and non-cache or specialized equipment. Damaged property **will be turned into the Supply Unit** prior to an Incident Replacement Requisition being approved.

Replacement of cache equipment is documented on a 213 General Message form and filled at the Supply Unit or approved for replacement at the home unit. Approval for replacement of non-standard cache items has been delegated to the IC, Finance Section Chief and IBA. You should initiate this process at least two days prior to demob.

Personnel who need to replace/repair damaged property will document the request and circumstances on a 213 General Message signed by your Incident Supervisor. The lost or damaged item(s) will then be taken to either, Supply, Communications or Ground Support for inspection and recommendation for replacement or repair. Bring the completed form to COMP/CLAIMS who will review the request and forward it to the FSC. The IC/FSC will make a decision as to whether or not the items can be replaced or repaired with incident funds.

Items originally purchased through use of preparedness funds which need to be replaced due to normal wear and tear should be accomplished using home unit funds, not incident funds. If government property was damaged on the incident due to a specific event, e.g. wind event destroys tent, items are burned over or caused by actions where there is no negligence, the incident could, upon receipt of required documentation and proof of damage, authorize replacement using the Incident Replacement Requisition.

In some cases, the cache replacement is not acceptable on some specialty items (e.g. sleeping bag or specialty packs). These items may be replaced with no more than "cache" quality and cost. The IBA or FSC must approve these requests.

If your request is approved, provide the approval and support documentation to Ordering or Supply for issuing an "S" number.

Please feel free to visit Comp/Claims Unit Leader Scott Parsons or myself if you have any questions.

Human Resource Message
September 21, 2018

Sexual harassment is **unwelcome sexual behavior**, which could be expected to make a person feel offended, humiliated or intimidated. **It is also illegal.** It can be physical, verbal or written. Sexual harassment is covered in the workplace when it happens:

- At work.
- At work-related events.
- Between people sharing the same workplace.
- Between colleagues outside of work.

I want to focus on that last point. Maybe at one time you were in a consensual workplace relationship, or everyone participated in inappropriate joking around. However when the relationship ends and you are told NO, or if someone is no longer comfortable joking in that manner and says to stop!

NO MEANS NO! AND STOP MEANS STOP!

I am just trying to help you keep your job

Delta-Hirz Fire Suppression Repair

Repair Objectives

- **Minimize Surface and Gully Erosion**
- **Minimize Loss of Soil Productivity due to Erosion In Cleared Areas**
- **Repair Meadows and Wetlands Damaged By Suppression Activities**
- **Minimize Spread of Noxious Weed Infestations**
- **Minimize Excessive Side-Cast Fuels Along Roads**
- **Minimize Impacts to Inventoried Roadless Areas and Wild & Scenic River Corridors**
- **Repair Impacts to Cultural and Historic Resources**
- **Repair Damage to National Forest Roads and Trails Caused by Fire Suppression Activities**
- **Review by Agency READ/REAFs for On-Site Verification of Objectives Completed**

Suppression Repair Focus

- **Dozer Lines**
- **Hand Lines**
- **Roads and Trails**
- **Safety Zones and Staging Areas**
- **Drop Points**
- **Helispots**
- **Water Sources**

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart (feet)
1 – 5	200
6 – 20	125
21 – 40	60
41 – 60	40
>60	25

Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.

Waterbars should be no more 2-3 feet tall on dozer lines to enable future access.

Stage 2 Suppression Repair Guidelines

(Apply to National Forest System Lands only on dozer lines with moderate to heavy suppression generated debris)

Applicable Suppression Repair Plan Objectives

- Minimize loss of soil productivity due to potential erosion in cleared areas.
- Minimize surface erosion.
- Minimize excessive side-cast fuels.

General Instructions

- Pile excessive amounts of suppression generated debris.
- Smaller concentrations of suppression generated debris can be feathered back into scraped side slope areas in order to breakdown fuel concentrations and reduce erosion.

Piling Specifications

- Piles should be located at least 10 feet away from tree boles and preferably out of the drip line of the canopy where possible.
- If working in close or closed canopy piles should be built in a configuration that prevents excessive tree scorch (e.g. small piles, windrowed piles).
- If working in large openings on large dozer lines piles can be larger (e.g. 25x25 feet).
- Compress piles as much as possible to improve burn consumption.
- Piles should be clean (free of soil) to ensure adequate consumption during burning and reduced risk of escape in spring.
